

CONTENTS

PREFACE	vii
INTRODUCTION	xi
1.1 The Basis of Prediction—Experience of the Past	xii
1.2 Prediction of Deterministic Processes	xiii
1.3 Prediction of Random Processes	xiii
1. PREDICTION OF DETERMINISTIC PROCESSES.	
INTERPOLATION AND EXTRAPOLATION	1
1.1 Interpolation and Extrapolation	1
2. PREDICTION OF STATIONARY RANDOM PROCESSES	25
2.1 Summary of Probability Theory and the Theory of Random Functions	25
2.2 Criteria of Prediction Quality. Optimality Criteria	33
2.3 Predicting Stationary Random Sequences	37
2.4 Predicting Stationary Random Processes	50
3. PREDICTING NONSTATIONARY RANDOM PROCESSES	69
3.1 Problem Statement	69
3.2 The Method of Characteristic Modes	70
3.3 Combined Method of Predicting Nonstationary Random Processes	79
3.4 A Second Modification of the Combined Method	81
3.5 Predicting the Internal Pressure During Brain Hemorrhage	83
4. COGNITIVE SYSTEMS USED AS PREDICTING FILTERS AND REGULATORS	91
4.1 A Universal Predictor Which Optimizes Itself by a Learning Process	95
4.2 The “Alpha” Cognitive System—A Predicting Filter	106
4.3 Cognitive Systems Using Threshold Logic Elements	119

4.4 The Application of Recognition Systems as Learning Correctors in Extremal Control	121
4.5 Elements of Stability Theory and of the Theory of Invariance of Combined Systems Containing Predicting Filters	153
