Preface vii

1. Introduction 1

1.1 Dirichlet–Dirichlet Domain Decomposition Methods in Retrospect 1

1.2 Two Origins of Domain Decomposition Methods 11

2. Fundamentals of the Schwarz Methods 19

2.1 Elliptic Model Problems and their Discretizations 19

2.2 Domain Decomposition Methods as Preconditioning . . . 23

2.2.1 Simplification of Local Bilinear Forms 23

2.2.2 Additive Domain Decomposition Algorithms . . . 25

2.2.3 Inexact Subspaces Preconditioning 29

2.2.4 Multiplicative Algorithms 33

2.2.5 Hybrid Algorithms 35

2.2.6 Jacobi and Gauss-Seidel Iterations 36

2.3 Main Factors Influencing Convergence 37

2.3.1 Convergence Analysis in the Case of Two Subspaces 37

2.3.2 Convergence of Additive Schwarz Algorithms . . . 40

2.3.3 Exact Representation of the Minimal and Maximal Eigenvalues of $\mathcal{K}^{-1}\mathbf{K}$ 45

2.3.4 Convergence of Multiplicative Schwarz Algorithms 46

3. Overlapping Domain Decomposition Methods 49

3.1 Construction Principles 49
3.2 Discretizations and Generalized Quasiuniformity Conditions 51
3.3 Algorithms with Generous Overlap 56
3.4 Loss in Convergence Due to Small Overlap 61
3.5 Multilevel Versions 64

4. Nonoverlapping DD Methods for h FE Discretizations in 2d 71

4.1 Schur Complement Algorithms for h Discretizations . . . 72
4.1.1 Exact Schur Complement Algorithms 72
4.1.2 Schur Complement Preconditioning 75
4.2 Dirichlet–Dirichlet DD Algorithms 83
4.2.1 Flow Chart of DD Algorithms 83
4.2.2 Relative Condition Number of DD Preconditioners 88
4.2.3 Discrete Low Energy Prolongations 92
4.2.4 Numerical Complexity of DD Algorithms 98

5. BPS-type DD Preconditioners for 3d Elliptic Problems 101

5.1 DD Algorithms and their Main Components 105
5.1.1 Decomposition and Finite Element Meshes 105
5.1.2 Structure of DD Preconditioners 108
5.1.3 Local Dirichlet Problems and Prolongation 111
5.1.4 Face Component 117
5.1.5 Wire Basket Component 120
5.2 Condition Number and Complexity Estimates 125
5.2.1 Abstract Bound for the Relative Condition Number 125
5.2.2 Dependence of the Relative Condition Number on Discretization and Decomposition Parameters . . 127
5.2.3 Subsidiary Results 130

6. DD Algorithms for Discretizations with Chaotically Piecewise Variable Orthotropism 145

6.1 Single Slim Domain 148
6.1.1 Boundary Norms for Harmonic Functions 149

6.1.2 Boundary Norms for Discrete Harmonic Functions in Slim Rectangles . . . 159
6.1.3 Finite-Difference Shape Dependent Boundary Norm . . . 164
6.2 Schur Complement Preconditioning by DD . . . 168
6.2.1 Preconditioning by Nonoverlapping DD Techniques . . . 168
6.2.2 Preconditioning by Overlapping DD . . . 171
6.2.3 Schur Complement Preconditioners by Overlapping DD: Some Simplifications . . . 174
6.3 Orthotropic Discretizations with Arbitrary Aspect Ratios on Thin Rectangles . . . 176
6.3.1 Reducing to Isotropic Discretization . . . 177
6.3.2 Schur Complement Preconditioner . . . 183
6.3.3 Compatible Schur Complement Preconditioner-Solver for Subdomains . . . 185
6.4 Discretizations with Piecewise Variable Orthotropism on Domains Composed of Shape Irregular Rectangles . . . 189

7. Nonoverlapping DD Methods for *hp* Discretizations of 2d Elliptic Equations 197
7.1 Structure of DD Preconditioners and its Reflection in the Relative Condition Number . . . 200
7.1.1 Main Components of DD Preconditioners . . . 200
7.1.2 Preconditioners of Nepomnyaschikh's and BPS Types . . . 204
7.1.3 Relative Condition Number of DD Preconditioners . . . 208
7.2 Prolongations and Bounded Extension Splitting . . . 218
7.2.1 A Few Remarks on Low Energy Prolongations in Polynomial Spaces . . . 218
7.2.2 Almost Discrete Harmonic Prolongations by Means of Inexact Subdomain Dirichlet Solvers . . . 221
7.3 Square Reference p-Elements, Their Stiffness and Mass Matrices . . . 224
7.3.1 Coordinate Polynomials of Square Hierarchical and Spectral Reference Elements . . . 227
7.3.2 Stiffness and Mass Matrices of Hierarchical Elements . . . 230

7.4 Preconditioning of Stiffness and Mass Matrices by Finite-Difference Matrices 233
7.4.1 Preconditioners for Hierarchical Reference Elements 234
7.4.2 One-Dimensional Spectral Elements 239
7.4.3 Two-Dimensional Spectral Reference Elements 247
7.4.4 Factored Preconditioners for Spectral Elements 250
7.5 Schur Complement Preconditioners for Reference Elements 255
7.5.1 Introductory Remarks 255
7.5.2 Polynomial Bases on the Edges 256
7.5.3 Edge Schur Complement Preconditioning for Hierarchical Coordinate Polynomials 257
7.5.4 Inter-element Boundary Schur Complement Preconditioning, Lagrange Interpolation Edge Coordinate Functions 263
7.5.5 Numerical Complexity of Schur Complement Algorithms 266
7.5.6 Schur Complement Preconditioner with Alternative Inexact Solvers 268

8. Fast Dirichlet Solvers for 2d Reference Elements 273
8.1 Fast Dirichlet Solvers for Hierarchical Reference Elements 275
8.1.1 Algebraic Multigrid Solvers 275
8.1.2 Secondary DD Solver for the Local Dirichlet Problems 289
8.1.3 Two Main Modulus of DD Solver for Local Dirichlet Problems 307
8.1.4 Numerical Experiment with DD Solver for Local Dirichlet Problems, Some Generalizations 321
8.2 Numerical Testing of DD Solver for Dirichlet Problem in a L-Shaped Domain 322
8.3 Fast Dirichlet Solvers for 2d Spectral Reference Elements 326
8.3.1 Fast Domain Decomposition Preconditioner-Solver 326

8.3.2 Fast Multilevel Solver 335
8.4 The Numerical Complexity of DD Methods in Two Dimensions 341
8.4.1 Hierarchical Discretizations 341
8.4.2 Discretizations by Spectral Elements 342

9. Nonoverlapping Dirichlet–Dirichlet DD Methods for *hp* Discretizations of 3d Elliptic Equations 345

9.1 General Structure of DD and Schur Complement Preconditioners 346
9.1.1 Main Components of DD Preconditioners 347
9.1.2 Abstract Bounds of Relative Spectrum of DD Preconditioners 354
9.1.3 Interface Boundary Schur Complement Preconditioning 356
9.1.4 Wire Basket Component 369
9.1.5 Numerical Complexity 384
9.2 Reference Elements and Finite-Difference Preconditioners 386
9.2.1 Hierarchical Reference Elements 387
9.2.2 Hierarchical Elements for Adaptive Computations 392
9.2.3 Spectral Reference Elements 393
9.2.4 Factorized Preconditioners for Spectral Reference Elements 395
9.3 Fast Preconditioner-Solvers for Internal and Face Problems 396
9.3.1 Multilevel Wavelet Solver of Beuchler-Schneider-Schwab for Internal Dirichlet Problems, Hierarchical Elements 397
9.3.2 Multiresolution Wavelet Solver for Faces 401
9.3.3 Domain Decomposition Solver for Hierarchical Reference Elements 403
9.3.4 Fast Domain Decomposition Solver for Spectral Elements 412
9.3.5 Multiresolution Wavelet Solver for Internal Dirichlet Problems for Spectral Elements 417

Appendix A Technical Proofs 421

A.1 Proof of Theorem 8.4 421

Appendix B Abbreviations and Notations 437

B.1 Abbreviations 437

B.2 Numbers, Vectors and Matrices 438

B.3 Intervals, Domains, Boundaries, Derivatives, Polynomial and Functional Spaces, and Norms 439

B.4 Finite Element Method 440

B.5 Domain Decomposition 441

Bibliography 443
