CONTENTS

I MATRIX MODELS, CHERN–SIMONS THEORY, AND THE LARGE N EXPANSION

1 Matrix models 3
- 1.1 Basics of matrix models 3
- 1.2 Matrix model technology I: saddle-point analysis 11
- 1.3 Matrix model technology II: orthogonal polynomials 18

2 Chern–Simons theory and knot invariants 25
- 2.1 Chern–Simons theory: basic ingredients 25
- 2.2 Perturbative approach 29
  - 2.2.1 Perturbative structure of the partition function 29
  - 2.2.2 Group factors 33
- 2.3 Canonical quantization and surgery 36
- 2.4 Framing dependence 44
- 2.5 Results on Wilson loops and knot invariants 46
  - 2.5.1 General properties 46
  - 2.5.2 Torus knots 49
- 2.6 $U(\infty)$ representation theory 51
- 2.7 The $1/N$ expansion in Chern–Simons theory 59
- 2.8 Chern–Simons theory as a matrix model 62

II TOPOLOGICAL STRINGS

3 Topological sigma models 71
- 3.1 The $\mathcal{N} = 2$ supersymmetric sigma model 71
- 3.2 Topological twist 73
- 3.3 The topological type-A model 78
- 3.4 The topological type-B model 83

4 Topological strings 87
- 4.1 Coupling to gravity 87
- 4.2 Relation to compactifications of type II string theory 88
- 4.3 The type-A topological string 89
  - 4.3.1 Mathematical description 89
  - 4.3.2 Integrality properties and Gopakumar–Vafa invariants 92
- 4.4 Open topological strings 97
  - 4.4.1 Type A model 97
  - 4.4.2 Type-B model 105

Mariño, Marcos
Chern-Simons theory, matrix models and topological strings
2015
digitalisiert durch:
IDS Basel Bern

5 Calabi–Yau geometries 107
5.1 Non-compact Calabi–Yau geometries: an introduction 107
5.2 Constructing toric Calabi–Yau manifolds 109
5.2.1 $\mathbf{C}^3$ 109
5.2.2 The general case 110
5.3 The conifold transition 115
5.4 Examples of closed string amplitudes 118

III THE TOPOLOGICAL STRING/GAUGE THEORY CORRESPONDENCE

6 String theory and gauge theory 123

7 String field theory and gauge theories 127
7.1 Open string field theory 127
7.2 Chern–Simons theory as an open string theory 128
7.2.1 Open topological strings on T^*M 128
7.2.2 More general Calabi–Yau manifolds 132
7.3 Matrix model as an open string theory 133
7.3.1 Holomorphic Chern–Simons theory 133
7.3.2 Type B topological strings and matrix models 134
7.3.3 Open string amplitudes and multicut solutions 138

8 Geometric transitions 143
8.1 The conifold transition and the large N duality 143
8.2 Incorporating Wilson loops 144
8.3 Geometric transitions for more general toric manifolds 148
8.4 Matrix models and geometric transitions 153

9 The topological vertex 157
9.1 Framing of topological open string amplitudes 157
9.2 Definition of the topological vertex 158
9.3 Gluing rules 160
9.4 Derivation of the topological vertex 162
9.5 Useful formulae for the vertex 166
9.6 Some applications 168
9.7 Further properties of the topological vertex 173

10 Applications of the topological string/gauge theory correspondence 177
10.1 Applications to knot invariants 177
10.2 Applications to $\mathcal{N} = 2$ supersymmetric gauge theory 180

A Symmetric polynomials 185

References 187
