1

Behaviour Therapy and the Development of the Behaviour-Analytic Approach

Introduction	1
Theoretical and methodological foundations	4
The behaviour-analytic procedure	7
Behavioural analysis and problem formulation:	
The initial interview	8
Clinical experimentation	12
Modification methodology	13
Summary	15

2

Employing the Behaviour-Analytic Approach: Recent Findings in the Clinical Analysis of Complex Neurotic Disorders

Introduction	17
--------------	----

Symptomatic behaviours	19
Maldaptive coping styles	21
Conclusions	23

3

**The Self-System in Individual Adjustment:
A Perspective of Psychological Approaches**

Introduction	25
The self in psychological theorizing	26
The self-system in general psychology	26
The self in psychodynamic approaches	27
The self in phenomenological and organismic approaches	30
Clinical adaptations of the phenomenological self-system	33
Evaluative aspects of the self-system:	
Self-ideal discrepancies	38
The contributions of self-regulation, social learning, and information processing theories	41
Biases in information processing	48
Toward a self-schema model of complex disorders	51
Footnotes	54

4

**The Clinical Validity of Self-Ideal Discrepancies:
A Normative Study**

Introduction	55
The assessment of self-ideal discrepancies	58
Instrument selection	60
Normative study	62
Description of samples	62
Results	63
Footnotes	67

5

**Self-Ideal Discrepancy and Maladjustment:
An Investigation of Clinical Hypotheses**

Introduction	69
Hypotheses, selection of measures, and bilateral relationships	69
Research hypothesis 1	70
Instrument Selection	71
Results	71
Research Hypothesis 2	73
Instrument Selection	73
Results	74
Research Hypothesis 3	75
Instrument Selection	77
Results	78
Research Hypothesis 4	79
Instrument Selection	81
Results	82
Towards the clinical model: Negative self- evaluative schemata and correlates of behavioural maladjustment	84
Results	84
Footnotes	87

6

**The Role of Self-Schemata in Coping and Achievement:
Prediction of Self-Efficacy, Self-Evaluation, Self-Talk,
and Task Performance**

Introduction	89
Method	93
Subjects	93
Experimental design	94
Measures	94
Procedure	95
Adaptation period	96
Anticipation period	96

Test administration period	96	
Recovery period	96	
Assessment of self-statements	97	
Results		97
Self-efficacy, self-evaluation, and performance	97	
Investigation of self-talk	101	
Global analysis	101	
Analysis of self-talk components	103	
Self-talk and performance	104	
Self-talk and anxiety	104	
Discussion		105
Footnotes		111

7

Conclusions and Implications for Behavioural Treatments of Complex Cases

Introduction		113
Priorities for treatment targets: "Symptoms" or self-evaluative attitudes?		115
General considerations for the treatment of complex problems		120
Specific components in the self-regulation process	123	
Individual standards and goals	124	
Acquisition and maintenance of skills	126	
Improving self-reinforcing behaviours	127	
Adjustment of cognitive processing	128	
Integrating components into treatment	133	
The role of the therapist		133
Résumé		136
Footnotes		139
References		141
Appendix A: Materials		155
Appendix B: Additional Results		159
