about this book xxiv

PART 1 INTRODUCTION TO POSTGIS1

I *What is a spatial database?* 3

- 1.1 Thinking spatially 4
- 1.2 Introducing PostGIS 6
 - Why PostGIS* 7 ▪ *Alternatives to PostGIS* 10 ▪ *Installing PostGIS* 12
- 1.3 Spatial data types 14
 - Geometry type* 15 ▪ *Geography type* 15 ▪ *Raster type* 16
 - Topology type* 17
- 1.4 Hello real world 17
 - Digesting the problem* 18 ▪ *Modeling* 19 ▪ *Loading data* 21
 - Writing the query* 24 ▪ *Viewing spatial data with OpenJump* 25
- 1.5 Summary 26

2 *Spatial data types* 27

2.1 Type modifiers 28

Subtype type modifiers 28 ▪ *Spatial reference identifier* 29

2.2 Geometry 29

Points 30 ▪ *Linestrings* 31 ▪ *Polygons* 32 ▪ *Collection geometries* 34 ▪ *The M coordinate* 38 ▪ *The Z coordinate* 40
Polyhedral surfaces and TINs 42 ▪ *Curved geometries* 44
Spatial catalog for geometry 49 ▪ *Managing geometry columns* 51

2.3 Geography 52

Differences between geography and geometry 53 ▪ *Spatial catalogs for geography* 54

2.4 Raster 54

Properties of rasters 55 ▪ *Creating rasters* 56 ▪ *Spatial catalog for rasters* 58

2.5 Summary 59

3 *Spatial reference system considerations* 60

3.1 Spatial reference systems: what are they? 61

Geoids 61 ▪ *Ellipsoids* 63 ▪ *Datum* 65 ▪ *Coordinate reference system* 65 ▪ *Spatial reference system essentials* 66
Projections 66

3.2 Selecting a spatial reference system for storing data 69

Pros and cons of using EPSG:4326 70 ▪ *Geography data type for EPSG:4326* 71 ▪ *Mapping just for presentation* 71
Covering the globe when distance is a concern 74

3.3 Determining the spatial reference system of source data 76

Guessing at a spatial reference system 77 ▪ *When the spatial reference system is missing from spatial_ref_sys table* 80

3.4 Summary 81

4 *Working with real data* 82

4.1 General utilities 83

PostgreSQL built-in tools 83 ▪ *Downloading files* 84
Extracting files 85

4.2 Importing and exporting shapefiles 86

Importing with shp2pgsql 87 ▪ *Importing and exporting with shp2pgsql-gui* 88 ▪ *Exporting with pgsql2shp* 91

- 4.3 Importing and exporting vector data with ogr2ogr 92
Environment variables 93 ▪ *Ogrinfo* 93 ▪ *Importing with ogr2ogr* 93 ▪ *Exporting with ogr2ogr* 97
- 4.4 Importing OpenStreetMap data with osm2pgsql 99
Getting OSM data 100 ▪ *Loading OSM-formatted data with osm2pgsql* 101
- 4.5 Importing and exporting raster data 103
Using gdalinfo to inspect rasters 103 ▪ *Importing raster data with raster2pgsql* 105 ▪ *Gdal_translate and gdalwarp* 108
Using PostgreSQL functions to output raster data 110
- 4.6 Summary 111

5 *Using PostGIS on the desktop* 113

- 5.1 Desktop viewing tools at a glance 114
Capsule reviews 114 ▪ *Spatial database support* 116
Format support 117 ▪ *Web services supported* 119
- 5.2 OpenJUMP workbench 120
OpenJUMP feature summary 120 ▪ *PostGIS support* 121
Register data source 122 ▪ *Rendering PostGIS geometries* 123
Exporting data 125
- 5.3 QGIS 126
Installing QGIS 126 ▪ *Using QGIS with PostGIS* 126
Importing and exporting layers 131
- 5.4 uDig 133
Using uDig with PostGIS 133 ▪ *Connecting to PostGIS* 134
Viewing and filtering PostGIS data 134
- 5.5 gvSIG 135
Using gvSIG with PostGIS 136 ▪ *Exporting data* 139
- 5.6 Summary 139

6 *Geometry and geography functions* 140

- 6.1 Output functions 141
Well-known binary (WKB) and well-known text (WKT) 142
Keyhole Markup Language (KML) 142 ▪ *Geography Markup Language (GML)* 142 ▪ *Geometry JavaScript Object Notation (GeoJSON)* 143 ▪ *Scalable Vector Graphics (SVG)* 143
Extensible 3D Graphics (X3D) 144 ▪ *Examples of output functions* 144 ▪ *Geohash* 145

- 6.2 Constructor functions 146
 - Creating geometries from text and binary formats* 146 ▪ *Creating geographies from text and binary formats* 150 ▪ *Using text or binary representations as function arguments* 150
 - 6.3 Accessor and setter functions 151
 - Spatial reference identifiers* 151 ▪ *Transforming geometry to different spatial references* 152 ▪ *Using transformation with the geography type* 153 ▪ *Geometry type functions* 153 ▪ *Geometry and coordinate dimensions* 155 ▪ *Retrieving coordinates* 155 ▪ *Checking geometry validity* 156 ▪ *Number of points that defines a geometry* 156
 - 6.4 Measurement functions 158
 - Geometry planar measurements* 159 ▪ *Geodetic measurements* 160
 - 6.5 Decomposition functions 161
 - Bounding box of geometries* 161 ▪ *Boundaries and converting polygons to linestrings* 163 ▪ *Centroid and point on surface* 165 ▪ *Returning points defining a geometry* 166 ▪ *Decomposing multi-geometries and geometry collections* 167
 - 6.6 Composition functions 168
 - Making points* 169 ▪ *Making polygons* 170 ▪ *Promoting single geometries to multi-geometries* 171
 - 6.7 Simplification functions 172
 - Grid snapping and coordinate rounding* 172
 - Simplification* 172
 - 6.8 Summary 174
- 7 Raster functions 175**
- 7.1 Raster terminology 176
 - 7.2 Raster constructors 178
 - Converting geometries to rasters with ST_AsRaster* 179 ▪ *Loading rasters with raster2pgsql* 181 ▪ *Constructing rasters from scratch: ST_MakeEmptyRaster and ST_AddBand* 182 ▪ *Setting pixels: ST_SetValue and ST_SetValues* 182 ▪ *Creating rasters from other rasters* 184 ▪ *Converting other raster formats with ST_FromGDALRaster* 186
 - 7.3 Raster output functions 186
 - ST_AsPNG, ST_AsJPEG, and ST_AsTiff* 186 ▪ *Output using ST_AsGDALRaster* 187 ▪ *Using psql to export rasters* 189

- 7.4 Raster accessors and setters 190
 - Basic raster metadata properties* 191 ▪ *Pixel statistics* 192
 - Pixel value accessors* 193 ▪ *Band metadata setters* 195
- 7.5 Georeferencing functions 196
 - Metadata setters* 196 ▪ *Processing functions* 197
- 7.6 Reclassing functions 200
- 7.7 Polygonizing functions 201
 - ST_ConvexHull* 201 ▪ *ST_Envelope* 201 ▪ *ST_Polygon* 201
 - ST_MinConvexHull* 201
- 7.8 Summary 202

8 *PostGIS TIGER geocoder* 203

- 8.1 Installing the PostGIS TIGER geocoder 204
- 8.2 Loading TIGER data 205
 - Configuration tables* 205 ▪ *Loading nation and state data* 205
- 8.3 Normalizing addresses 207
 - Using normalize_address* 207 ▪ *Using the PAGC address normalizer* 208
- 8.4 Geocoding 211
 - Geocoding using address text* 212 ▪ *Geocoding using normalized addresses* 214 ▪ *Batch geocoding* 214
- 8.5 Reverse geocoding 216
- 8.6 Summary 217

9 *Geometry relationships* 218

- 9.1 Bounding box and geometry comparators 219
 - The bounding box* 219 ▪ *Bounding box comparators* 221
- 9.2 Relating two geometries 222
 - Interior, exterior, and boundary of a geometry* 222
 - Intersections* 222 ▪ *A house plan model* 227 ▪ *Contains and within* 228 ▪ *Covers and covered by* 230 ▪ *Contains properly* 230 ▪ *Overlapping geometries* 232 ▪ *Touching geometries* 232 ▪ *Crossing geometries* 233 ▪ *Disjoint geometries* 234
- 9.3 The faces of equality: geometry 234
 - Spatial equality versus geometric equality* 235 ▪ *Bounding-box equality* 236

- 9.4 Underpinnings of relationship functions 239
 - The intersection matrix* 240 ▪ *Using ST_Relate* 241
- 9.5 Summary 244

PART 2 PUTTING POSTGIS TO WORK245

10 Proximity analysis 247

- 10.1 Nearest neighbor searches 248
 - Which places are within X distance?* 248 ▪ *Using ST_DWithin and ST_Distance for N closest results* 248 ▪ *Using ST_DWithin and DISTINCT ON to find closest locations* 249 ▪ *Intersects with tolerance* 250 ▪ *Finding N closest places using KNN distance bounding-box operators* 250 ▪ *Combining KNN distance-box operators with ST_Distance* 252 ▪ *Using window functions to find closest N places* 254
- 10.2 Using KNN with geography types 255
- 10.3 Geotagging 256
 - Tagging data to a specific region* 257 ▪ *Linear referencing: snapping points to the closest linestring* 258
- 10.4 Summary 259

11 Geometry and geography processing 261

- 11.1 Using spatial aggregate functions 262
 - Creating a multipolygon from many multipolygon records* 262
 - Creating linestrings from points* 264
- 11.2 Clipping, splitting, tessellating 265
 - Clipping* 266 ▪ *Splitting* 267 ▪ *Tessellating* 268
- 11.3 Breaking linestrings into smaller segments 274
 - Segmentizing linestrings* 274 ▪ *Creating two-point linestrings from many-point linestrings* 275 ▪ *Breaking linestrings at point junctions* 276
- 11.4 Translating, scaling, and rotating geometries 279
 - Translating* 279 ▪ *Scaling* 281 ▪ *Rotating* 283
- 11.5 Using geometry functions to manipulate and create geographies 284
 - Cast-safe functions* 284 ▪ *Transformation-recommended functions* 285
- 11.6 Summary 286

12 Raster processing 287

- 12.1 Loading and preparing data 288
- 12.2 Forming larger rasters using spatial aggregate functions 290
 - Reconstituting tiled files* 290
 - *Carving out areas of interest using clipping and unioning* 291
 - *Using specific expression types with ST_Union* 291
- 12.3 Working with bands 292
 - Using ST_AddBand to form multiband rasters from single-band rasters* 292
 - *Using ST_Band to process a subset of bands* 293
- 12.4 Tiling rasters 294
- 12.5 Raster and geometry intersections 295
 - Pixel stats* 296
 - *Adding a Z coordinate to a 2D linestring using ST_Value* 297
 - *Converting 2D polygon to 3D polygon* 298
- 12.6 Raster statistics 299
 - Extruding pixel values* 299
 - *Raster statistics functions* 301
- 12.7 Map algebra 303
 - Choosing between expression or callback function* 304
 - *Using a single-band map algebra expression* 304
 - *Using a single-band map algebra function* 305
 - *Map algebra with neighborhoods* 306
- 12.8 Summary 308

13 Building and using topologies 309

- 13.1 What topology is 310
- 13.2 Using topologies 311
 - Installing the topology extension* 312
 - *Creating a topology* 312
 - The topogeometry type* 316
 - *Recap of using topologies* 319
- 13.3 Topology of Victoria, BC 319
 - Creating the Victoria topology* 319
 - *Adding primitives to a topology* 320
 - *Creating topogeometries* 323
- 13.4 Fixing topogeometry issues by editing topology primitives 326
 - Removing faces by removing edges* 328
 - *Checking for shared faces* 330
 - *Editing topogeometries* 330
- 13.5 Inserting and editing large data sets 331
- 13.6 Simplifying with topology in mind 333

- 13.7 Topology validation and summary functions 335
- 13.8 Summary 336

14 Organizing spatial data 337

- 14.1 Spatial storage approaches 338
 - Heterogeneous columns* 338 ▪ *Homogeneous columns* 340
 - Typmod versus constraints* 341 ▪ *Table inheritance* 343
- 14.2 Modeling a real city 346
 - Modeling using heterogeneous geometry columns* 348 ▪ *Modeling using homogeneous geometry columns* 352 ▪ *Modeling using inheritance* 353
- 14.3 Making auto-updateable views 357
- 14.4 Using rules and triggers 358
 - Rules versus triggers* 358 ▪ *Using rules* 360 ▪ *Using triggers* 361
- 14.5 Summary 368

15 Query performance tuning 369

- 15.1 The query planner 370
 - Different kinds of spatial queries* 370 ▪ *Common table expressions and how they affect plans* 372
- 15.2 Planner statistics 372
- 15.3 Using explain to diagnose problems 374
 - Text explain versus pgAdmin graphical explain* 375 ▪ *The plan with no index* 376
- 15.4 Planner and indexes 380
 - The plan with a spatial index* 381 ▪ *Options for defining indexes* 382
- 15.5 Common SQL patterns and how they affect plans 386
 - SELECT subqueries* 386 ▪ *FROM subqueries and basic CTEs* 392 ▪ *Window functions and self-joins* 393
 - Laterals* 395
- 15.6 System and function settings 398
 - Key system variables that affect plan strategy* 399
 - Function-specific settings* 401
- 15.7 Optimizing spatial data 402
 - Fixing invalid geometries* 403 ▪ *Reducing the number of vertices by simplification* 403 ▪ *Clustering* 403
- 15.8 Summary 406

PART 3 USING POSTGIS WITH OTHER TOOLS 407

16 *Extending PostGIS with pgRouting and procedural languages* 409

- 16.1 Solving network routing problems with pgRouting 410
 - Installing pgRouting* 411 ▪ *Basic navigation* 411
 - Traveling salesman* 414
- 16.2 Extending PostgreSQL with PLs 416
 - Basic installation of PLs* 416 ▪ *What you can do with PLs* 417
- 16.3 PL/R 418
 - Getting started with PL/R* 419 ▪ *Saving data sets and plotting* 420 ▪ *Using R packages in PL/R* 423
 - Converting geometries into R spatial objects and plotting spatial objects* 425 ▪ *Outputting plots as binaries* 427
- 16.4 PL/Python 427
 - Installing PL/Python* 428 ▪ *Writing a PL/Python function* 429 ▪ *Using Python packages* 430 ▪ *Geocoding example* 432
- 16.5 PL/V8, CoffeeScript, and LiveScript 433
 - Installing PL/V8* 434 ▪ *Using other JavaScript libraries and functions in PL/V8* 434 ▪ *Using PL/V8 to write map algebra functions* 438
- 16.6 Summary 441

17 *Using PostGIS in web applications* 442

- 17.1 Limitations of conventional web technologies 443
- 17.2 Mapping servers 444
 - Platform considerations* 445 ▪ *OGC web service support* 446
 - Supported data sources* 447
- 17.3 Mapping clients 448
 - Proprietary services* 448
- 17.4 Using MapServer 450
 - Installing MapServer* 450 ▪ *Creating WMS and WFS services* 452 ▪ *Calling a mapping service using a reverse proxy* 454
- 17.5 Using GeoServer 456
 - Installing GeoServer* 456 ▪ *Setting up PostGIS workspaces* 457
 - Accessing PostGIS layers via GeoServer WMS/WFS* 459

17.6	Basics of OpenLayers and Leaflet	460
	<i>OpenLayers primer</i>	462
	<i>Leaflet primer</i>	466
	<i>Synopsis of the three different APIs</i>	467
17.7	Displaying data with PostGIS queries and web scripting	468
	<i>Displaying PostGIS rasters using raster queries</i>	468
	<i>Using PostGIS and PostgreSQL geometry output functions</i>	473
17.8	Summary	478
<i>appendix A</i>	<i>Additional resources</i>	479
<i>appendix B</i>	<i>Installing, compiling, and upgrading</i>	485
<i>appendix C</i>	<i>SQL primer</i>	493
<i>appendix D</i>	<i>PostgreSQL features</i>	516
	<i>index</i>	552
