<b>Abstract / Kurzfassung</b>	<b>iii</b>
<b>Declaration</b>	<b>v</b>
<b>Acknowledgments</b>	<b>vi</b>
<b>1. Introduction</b>	<b>1</b>
1.1. Motivation . . . . .	2
1.2. Previous work and state of the art . . . . .	4
1.3. Focus of this thesis . . . . .	5
<b>2. RFID technology and tag antenna fundamentals</b>	<b>7</b>
2.1. Basics related to RFID systems . . . . .	7
2.2. Passive UHF RFID back-scattered system . . . . .	9
2.2.1. Frequency bands and power regulations . . . . .	9
2.2.2. Standards . . . . .	10
2.2.3. Electronic Product Code (EPC) system . . . . .	10
2.3. UHF RFID tag . . . . .	11
2.4. Antenna basics and its various characteristic parameters . . . . .	13
2.4.1. Antenna patterns . . . . .	15
2.4.2. Isotropic antenna . . . . .	17
2.4.3. Antenna gain . . . . .	18
2.4.4. Directivity . . . . .	19
2.4.5. Input impedance . . . . .	19
2.4.6. Radiation efficiency . . . . .	20
2.5. Antenna radiating field region . . . . .	21
2.6. Performance evaluation of an UHF RFID tag . . . . .	22

2.6.1.	Estimating the maximum read range by Friis formula . . . . .	22
2.6.2.	Read range estimation via measurement in an anechoic chamber	24
<b>3.</b>	<b>Electrical characterization of different rubber sheets</b>	<b>27</b>
3.1.	Basics of the electrical characterization of a dielectric material . . .	28
3.2.	Basics of electric characterization methods . . . . .	30
3.2.1.	Electrical characterization using a parallel plate dielectric resonator (resonant method) . . . . .	30
3.2.2.	Electrical characterization using an open-end coaxial probe method (non-resonant method) . . . . .	32
3.3.	The measurement system in detail . . . . .	33
3.4.	Extraction of the material properties . . . . .	36
3.4.1.	Extraction of electrical parameters using a 3D EM model . .	37
3.4.2.	Modified extraction process in detail . . . . .	40
3.5.	Results of electrical parameters of rubber sheets . . . . .	43
3.5.1.	Electrical parameter of a CR rubber sheet . . . . .	44
3.5.2.	Electrical parameter of the EPDM rubber sheet . . . . .	47
3.6.	Investigating reliability, reproducibility and accuracy of the electrical characterization setup . . . . .	49
3.6.1.	The reliability of the modified extraction code . . . . .	49
3.6.2.	Reproducibility of measurements and the determined electrical parameters . . . . .	49
3.6.3.	Comparing the reliability and accuracy of the determined parameters . . . . .	50
3.7.	Summary of the chapter . . . . .	52
<b>4.</b>	<b>Design process of surface UHF RFID tag for rubber belts</b>	<b>55</b>
4.1.	Physical layout of a rubber belt . . . . .	55
4.2.	Representation of a belt with an electrical model . . . . .	57
4.3.	Surface UHF RFID tag design process . . . . .	59
4.3.1.	Basic of designed tag antenna . . . . .	60
4.3.2.	Designed surface UHF RFID tags . . . . .	64
4.4.	Performance analysis of the designed surface tags . . . . .	64
4.4.1.	Estimating the theoretical read range of the surface tags . .	64
4.4.2.	Read range estimations of the surface prototype tags via anechoic chamber . . . . .	68
4.4.3.	Checking the model by comparison of the read range for the tags . . . . .	71
4.4.4.	Variation in the read range due to various tolerances . . . .	72
4.5.	Investigation of the impact of different parameter variations of the belts . . . . .	73
4.5.1.	Impact of the electric parameter variations on the tag characteristics . . . . .	74

4.5.2. Impact of thickness variations on the tag characteristics . . .	75
4.5.3. Impact of changes in the shape of the rubber belt on the tag characteristics . . . . .	75
4.5.4. Impact of electrical parameter changes (caused by different chemical recipes) on the tag characteristics . . . . .	78
4.6. Bulk reading test to investigate logistic application . . . . .	80
4.7. Summary and outlook of the chapter . . . . .	81
<b>5. Embedded tag design process for the rubber belt</b>	<b>85</b>
5.1. Determination of a suitable antenna structure and fabrication technique	85
5.2. The embedded UHF RFID tag design process . . . . .	90
5.3. Mechanical testing of the embedded tag . . . . .	91
5.3.1. Tag placement inside a physical belt . . . . .	92
5.3.2. Mechanical test to check damages . . . . .	93
5.4. High speed test to detect a belt during operation . . . . .	93
5.5. Performance analysis of the embedded RFID tags . . . . .	94
5.5.1. Estimating the theoretical read range of the embedded tag based on the simulation . . . . .	95
5.5.2. Estimating the read range of the embedded tag based on anechoic chamber . . . . .	96
5.5.3. Variation in the tag performance . . . . .	97
5.6. Summary of the chapter . . . . .	98
<b>6. Summary and conclusions</b>	<b>101</b>
<b>A. Appendix</b>	<b>105</b>
A.1. Comparison of the electrical and physical belt model . . . . .	105
A.2. Impact of the belt on the tag characteristics . . . . .	106
