

Contents

Preface	vii
1 Mixtures of Normals	1
1.1 Finite Mixture of Normals Likelihood Function	6
1.2 Maximum Likelihood Estimation	9
1.3 Bayesian Inference for the Mixture of Normals Model	15
1.4 Priors and the Bayesian Model	16
1.5 Unconstrained Gibbs Sampler	25
1.6 Label-Switching	29
1.7 Examples	34
1.8 Clustering Observations	46
1.9 Marginalized Samplers	49
2 Dirichlet Process Prior and Density Estimation	59
2.1 Dirichlet Processes—A Construction	60
2.2 Finite and Infinite Mixture Models	64
2.3 Stick-Breaking Representation	68
2.4 Polya Urn Representation and Associated Gibbs Sampler	70
2.5 Priors on DP Parameters and Hyper-parameters	72
2.6 Gibbs Sampler for DP Models and Density Estimation	78
2.7 Scaling the Data	80
2.8 Density Estimation Examples	81

3 Non-parametric Regression	90
3.1 Joint vs. Conditional Density Approaches	90
3.2 Implementing the Joint Approach with Mixtures of Normals	93
3.3 Examples of Non-parametric Regression Using Joint Approach	96
3.4 Discrete Dependent Variables	104
3.5 An Example of Expenditure Function Estimation	108
4 Semi-parametric Approaches	115
4.1 Semi-parametric Regression with DP Priors	115
4.2 Semi-parametric IV Models	122
5 Random Coefficient Models	152
5.1 Introduction	152
5.2 Semi-parametric Random Coefficient Logit Models	157
5.3 An Empirical Example of a Semi-parametric Random Coefficient Logit Model	161
6 Conclusions and Directions for Future Research	187
6.1 When Are Non-parametric and Semi-parametric Methods Most Useful?	187
6.2 Semi-parametric or Non-parametric Methods?	189
6.3 Extensions	191
Bibliography	195
Index	201
