

CONTENTS

PART I

MATHEMATICAL MODELING PRELIMINARIES

	Introduction	3
1	The Mathematical Modeling of Continuous Processes	7
2	The Mathematical Modeling of Discrete Processes	84

PART II

NUMERICAL METHODS FOR SIMULATING LINEAR SYSTEMS ON A DIGITAL COMPUTER

3	An Introduction to Linear System Simulation	129
4	Discrete Analog Simulation	142
5	Root-Matching Methods	182

PART III

NUMERICAL METHODS FOR SIMULATING NONLINEAR SYSTEMS ON A DIGITAL COMPUTER

6	Nonlinear System Simulation	203
7	Modern Numerical Integration Methods	217
8	Classical Numerical Integration Methods	249

PART IV

FAST FUNCTION EVALUATION TECHNIQUES

9	Nested Parenthetical Forms and Chebyshev Economization	279
---	--	-----

APPENDIXES

A	Substitution Methods for Simulating Transfer Functions	301
B	Jury's Table of Z Transforms	306
C	Zero-Order T Integration and Its Relation to the Mean Value Theorem	318
INDEX		327
