CONTENTS

PART 1. BACKGROUND THEORY

CHAPTER	1. Introduction to the theory of linear integral equ	ations
1.	Definitions and examples	2
2.	Solution by iteration. The Liouville-Neumann series	4
3.	Existence of solutions. The Fredholm Alternative	5
4.	Proof of the Fredholm Alternative for equations of	_
_	the second kind	7
5.	Characteristic values and characteristic functions	8
6.	Singular values and singular functions	10
CHAPTER	2. Quadrature and Fourier series	
1.	Simple quadrature rules	12
2.	Convergence and correction terms	14
3.	Special quadrature formulae	16
4.	Construction of Fourier series	18
5.	Convergence of Fourier series	21
CHAPTER	3. Numerical linear algebra	
1.	Introduction, Systems of linear equations	23
2.	Linear least squares problems and the determination	
	of the rank of a matrix	28
3.	The algebraic eigenvalue problem	32
CHAPTER	4. Function spaces and linear operators	
1.	Motivation: Why talk about function spaces?	41
2.	Some relevant vector spaces	42
3.	Basic properties of Hilbert spaces	47
4.	Linear operators on Hilbert and Banach spaces	49
CHAPTER	5. Basic approximation theory	
1.	Introduction	54
2.	Types of approximating functions	54
3.	Interpolation (collocation)	55
4.	Best approximations	57
5.	Approximation algorithms	59
	PART 2. GENERAL NUMERICAL METHODS	
CHAPTER	6. Quadrature methods for Fredholm equations of the	second kir
1.	Introduction	64
2.	Formulation of discrete equations	65
3.	Choice of quadrature formula	67

Deferred approach to the limit
 Nonlinear equations
 Singular integral equations
 Removal of the diagonal term
 Use of product integration methods

10. Singularity in the solution

Use of finite differences

4.

11. Error analysis of quadrature methods 76

68

70

71

72

73

74

76

CHAPTER 7. Expansion methods

1. 2. 3. 4. 5.	Nature of approximating function Criteria for determining the approximation Choice of $\phi_0(x)$, $\phi_1(x)$,, $\phi_n(x)$ Theory of projection methods Other methods	80 81 87 92 94
CHAPTER	8. Linear programming solutions to integral equations	
1.	Outline of the method	97

1. Odd1110 01 0	90
2 A simple example	90
Z. A Simple Sharper State method	99
3. Further details of the method	100
. Free as hounds	100
4. Error bounds	101
5 Numerical examples	101
J. Numerical enamples	106
6. Acknowledgements	100

CHAPTER 9. Rayleigh-Ritz-Galerkin methods

1	Introduction	108
1.	mb s si servelue problem	109
2.	The eigenvalue problem	112
3.	Inhomogeneous equations	110
4.	Error estimates	113
5.	Numerical performance	116
6	Extension to nonlinear equations	120
.	Accession to include a particular and the second se	121
1.	Comparison with other methods	

CHAPTER 10. Numerical solution of the eigenvalue problem

1.	Methods based on quadrature rules	126
2.	Treatment of discontinuities using methods based on	132
3.	Expansion methods for the eigenproblem	135

CHAPTER 11. Volterra equations of the second kind

1.	Introduction	140
2	Multistep methods	141
3	Runge-Kutta methods	145
J.	Block methods	148
4. 5	Spline approximations	150
۲. د	Convergence and stability	151
0.	tonvergence and stability	158
/.	A-stability and the cubic spline method	190

CHAPTER 12. Methods for Volterra equations of first kind

1.	Introduction	162
2.	Conversion to equations of the second kind	163
3.	Numerical methods of solution	164
4.	Use of quadrature rules in the equation of the	
	first kind	164
5.	Higher order accuracy	167
6.	Product integration	170
•••	Appendix	172

CHAPTER 13. Fredholm equations of the first kind

1.	Introduction	175
2.	Nature of the problem	175

3. 4.	Singular function analysis Fundamental theorems	177 178
5.	Applications; noise; need for filtering	179
6.	Method of expansion in singular functions	180
7.	Use of other expansions	181
8.	Method of regularization	182
9.	Iterative methods	184
10.	Probabilistic methods	185
CHAPTER	14. Methods for integro-differential equations	
1.	Introduction. Volterra integro-differential equations	189
2.	Boundary value problems in integro-differential	102
2	equations	192
3.	Expansion methods for integro-differential equations	190
4.	Partial integro-differential equations	200
CHAPTER	15. Theory of nonlinear integral equations	
1.	The theory of nonlinear integral equations from	
	the standpoint of functional analysis	207
2.	The classical Schmidt-Lichtenstein theory	209
3.	Algebraic integral equations	211
4.	Contractive and monotone equations of second kind	212
5.	Bifurcation	218
6.	Hammerstein integral equations with Green's	
	function kernels	219
7.	Acknowledgements	220
CHAPTER	16. Methods for nonlinear systems of equations	
CHAPTER 1.	16. Methods for nonlinear systems of equations Direct methods	223
CHAPTER 1. 2.	16. Methods for nonlinear systems of equations Direct methods Methods based on functional analysis	223 225
CHAPTER 1. 2. 3.	16. Methods for nonlinear systems of equations Direct methods Methods based on functional analysis Iterative procedures, including Newton's method	223 225 229
CHAPTER 1. 2. 3. 4.	16. Methods for nonlinear systems of equations Direct methods Methods based on functional analysis Iterative procedures, including Newton's method Variational methods	223 225 229 232
CHAPTER 1. 2. 3. 4. 5.	16. Methods for nonlinear systems of equations Direct methods Methods based on functional analysis Iterative procedures, including Newton's method Variational methods Continuation methods	223 225 229 232 232
CHAPTER 1. 2. 3. 4. 5. 6.	16. Methods for nonlinear systems of equations Direct methods Methods based on functional analysis Iterative procedures, including Newton's method Variational methods Continuation methods Computational aspects of the solution of nonlinear	223 225 229 232 232
CHAPTER 1. 2. 3. 4. 5. 6.	16. Methods for nonlinear systems of equations Direct methods Methods based on functional analysis Iterative procedures, including Newton's method Variational methods Continuation methods Computational aspects of the solution of nonlinear systems	223 225 229 232 232 232
CHAPTER 1. 2. 3. 4. 5. 6. 7.	16. Methods for nonlinear systems of equations Direct methods Methods based on functional analysis Iterative procedures, including Newton's method Variational methods Continuation methods Computational aspects of the solution of nonlinear systems Acknowledgements	223 225 229 232 232 232 234 234
CHAPTER 1. 2. 3. 4. 5. 6. 7.	16. Methods for nonlinear systems of equations Direct methods Methods based on functional analysis Iterative procedures, including Newton's method Variational methods Continuation methods Computational aspects of the solution of nonlinear systems Acknowledgements	223 225 229 232 232 232 234 235

PART 3. APPLICATIONS

CHAPTER	19. Singular integrals and boundary value problems	
1.	Singular integral equations	258
2.	Dirichlet's problem	259
3.	Two Fredholm integral equations of the first kind	260
4.	Flow around a hydrofoil	262
5.	The dock problem	264
CHAPTER	20. Problems in two-dimensional potential theory	
1.	Introduction	267
2.	Boundary value problems for Laplace's equation	267
3.	Integral equation formulations	268
4.	Conformal mapping	270
5.	Numerical approximations	2/1
0.	Lxamples	272
CHAPTER	21. Numerical solution of scalar diffraction problems	
1.	Introduction	275
2.	Mathematical statement of the problem	275
3.	Integral equation formulations for the exterior	
	Neumann problem	277
4.	Failure of the integral equations at interior	
F	eigenvalues	2/9
5.	Improved integral equation formulations	201
7.	Numerical approximations	285
<i>.</i>	Numerical approximations	205
CHAPTER	22. A problem in the theory of water waves	
1.	Introduction	291
2.	Series expansions	292
3.	Another approach, by integral equations	297
CHAPTER	23. Use of finite elements in multidimensional problems in practice	
1.	Introduction	300
2.	The finite-element-type solution of integral equations	303
3.	Applications of the method	305
4.	Numerical results	307
CHAPTER	24. Potential problems in three dimensions	
1.	Introduction	312
2.	First formulation	313
3.	Second formulation	314
4.	Existence of solutions	315
5.	Discretisation	316

252 254 CHAPTER 25. Scattering problems in quantum mechanics

1. 2. 3. 4. 5.	Introduction Collision between two particles Solution for negative E Solution for positive E Three-body scattering	321 322 323 327 328
6.	Numerical solution of the Faddeev equations	331
