<b>Preface</b>	<i>page xi</i>
<b>Acknowledgments</b>	<b>xiv</b>
<b>1 Introduction</b>	<b>1</b>
<b>2 Preliminaries</b>	<b>3</b>
2.1 Logic	3
2.2 Complexity theory	5
<b>3 Basic complexity theory</b>	<b>8</b>
3.1 The P versus NP problem	8
3.2 Bounded arithmetic formulas	17
3.3 Bibliographical and other remarks	22
<b>4 Basic propositional logic</b>	<b>23</b>
4.1 Propositional proof systems	23
4.2 Resolution	25
4.3 Sequent calculus	31
4.4 Frege systems	42
4.5 The extension and the substitution rules	53
4.6 Quantified propositional logic	57
4.7 Bibliographical and other remarks	60
<b>5 Basic bounded arithmetic</b>	<b>62</b>
5.1 Theory $I\Delta_0$	63
5.2 Theories $S_2$ and $T_2$	68
5.3 Theory PV	75

5.4	Coding of sequences	79
5.5	Second order systems	83
5.6	Bibliographical and other remarks	92
<b>6</b>	<b>Definability of computations</b>	<b>93</b>
6.1	Polynomial time with oracles	94
6.2	Bounded number of queries	97
6.3	Interactive computations	97
6.4	Bibliographical and other remarks	101
<b>7</b>	<b>Witnessing theorems</b>	<b>102</b>
7.1	Cut-elimination for bounded arithmetic	102
7.2	$\Sigma_i^b$ -definability in $S_2^i$ and oracle polynomial time	105
7.3	$\Sigma_{i+2}^b$ - and $\Sigma_{i+1}^b$ -definability in $S_2^i$ and bounded queries	113
7.4	$\Sigma_{i+2}^b$ -definability in $T_2^i$ and counterexamples	120
7.5	$\Sigma_1^b$ -definability in $T_2^1$ and polynomial local search	121
7.6	Model-theoretic constructions	126
7.7	Bibliographical and other remarks	131
<b>8</b>	<b>Definability and witnessing in second order theories</b>	<b>132</b>
8.1	Second order computations	132
8.2	Definable functionals	134
8.3	Bibliographical and other remarks	138
<b>9</b>	<b>Translations of arithmetic formulas</b>	<b>139</b>
9.1	Bounded formulas with a predicate	139
9.2	Translation into quantified propositional formulas	144
9.3	Reflection principles and polynomial simulations	158
9.4	Model-theoretic constructions	172
9.5	Witnessing and test trees	180
9.6	Bibliographical and other remarks	183
<b>10</b>	<b>Finite axiomatizability problem</b>	<b>185</b>
10.1	Finite axiomatizability of $S_2^i$ and $T_2^i$	185
10.2	$T_2^i$ versus $S_2^{i+1}$	186
10.3	$S_2^i$ versus $T_2^i$	193
10.4	Relativized cases	194
10.5	Consistency notions	202
10.6	Bibliographical and other remarks	208
<b>11</b>	<b>Direct independence proofs</b>	<b>210</b>
11.1	Herbrandization of induction axioms	210
11.2	Weak pigeonhole principle	213

11.3	An independence criterion	220
11.4	Lifting independence results	225
11.5	Bibliographical and other remarks	231
<b>12</b>	<b>Bounds for constant-depth Frege systems</b>	<b>232</b>
12.1	Upper bounds	232
12.2	Depth $d$ versus depth $d + 1$	236
12.3	Complete systems	243
12.4	$k$ -evaluations	252
12.5	Lower bounds for the pigeonhole principle and for counting principles	258
12.6	Systems with counting gates	266
12.7	Forcing in nonstandard models	272
12.8	Bibliographical and other remarks	277
<b>13</b>	<b>Bounds for Frege and extended Frege systems</b>	<b>279</b>
13.1	Counting in Frege systems	279
13.2	An approach to lower bounds	286
13.3	Boolean valuations	289
13.4	Bibliographical and other remarks	297
<b>14</b>	<b>Hard tautologies and optimal proof systems</b>	<b>299</b>
14.1	Finitistic consistency statements and optimal proof systems	299
14.2	Hard tautologies	304
14.3	Bibliographical and other remarks	307
<b>15</b>	<b>Strength of bounded arithmetic</b>	<b>308</b>
15.1	Counting	308
15.2	A circuit lower bound	312
15.3	Polynomial hierarchy in models of bounded arithmetic	316
15.4	Bibliographical and other remarks	324
