Table of Contents

Preface ix

1. **ZF theory and some point sets on the real line** 1

2. **Countable versions of AC and real analysis** 21

3. **Uncountable versions of AC and Lebesgue nonmeasurable sets** 35

4. **The Continuum Hypothesis and Lebesgue nonmeasurable sets** 53

5. **Measurability properties of sets and functions** 67

6. **Radon measures and nonmeasurable sets** 87

7. **Real-valued step functions with strange measurability properties** 107

8. **A partition of the real line into continuum many thick subsets** 123

9. **Measurability properties of Vitali sets** 137

10. **A relationship between the measurability and continuity of real-valued functions** 151

11. **A relationship between absolutely nonmeasurable functions and Sierpiński–Zygmund type functions** 167

12. **Sums of absolutely nonmeasurable injective functions** 181

IDS Basel Bern

13. A large group of absolutely nonmeasurable additive functions 195

14. Additive properties of certain classes of pathological functions 209

15. Absolutely nonmeasurable homomorphisms of commutative groups 225

16. Measurable and nonmeasurable sets with homogeneous sections 239

17. A combinatorial problem on translation invariant extensions of the Lebesgue measure 253

18. Countable almost invariant partitions of G-spaces 269

19. Nonmeasurable unions of measure zero sections of plane sets 287

20. Measurability properties of well-orderings 299

Appendix 1: The axioms of set theory 317

Appendix 2: The Axiom of Choice and Generalized Continuum Hypothesis 341

Appendix 3: Martin's Axiom and its consequences in real analysis 355

Appendix 4: ω_1-dense subsets of the real line 371

Appendix 5: The beginnings of descriptive set theory 381
