Contents

1 Compartmental Modelling 1
1.1 Death Process 2
1.1.1 Survival of One Individual 2
1.1.2 Level of Small Populations 9
1.1.3 Medium Population Size 17
1.1.4 Large Populations 28
1.1.5 More than One Type of Transition 31
1.1.6 Applications 37
1.1.7 Summary/Conclusion 49
1.1.8 Exercise 50
1.2 Dynamics in Discrete Time 53
1.2.1 The Galton-Watson-Process 54
1.2.2 Large Populations in Discrete Time 66
1.2.3 Markov Chains 82
1.2.4 Exercise 100
1.3 Dynamics in Continuous Time 101
1.3.1 The Birth-Death Process 101
1.3.2 Linear Deterministic Dynamics 107
1.3.3 Exercise 115

Appendix: Compartmental Modelling 117
1 Proofs 117
1.1 Perron's Theorem 117
1.2 Irreducibility and Aperiodicity Implies Primitivity 121
2 Solutions 124
2.1 Death Process 124
2.2 Dynamics in Discrete Time 134
2.3 Dynamics in Continuous Time 136
2.4 Markov Chains 140
2.5 Dynamics in Continuous Time 144

2 Mathematical Ecology 157
2.1 Single Species Models 158
2.1.1 Exponential Growth 158
2.1.2 Limited Resources 162
2.1.3 Further Limited Growth Models 191
2.1.4 Harvesting Problems 194
2.1.5 Conclusion 198
2.1.6 Exercises 199
2.2 Metapopulation Models 200
2.2.1 Levin's Basic Model 201
2.2.2 Habitat Destruction 201
2.2.3 Rescue and Allee Effect 203
2.2.4 Heterogeneity in Patch Size 204
2.2.5 Conclusion 206
2.2.6 Exercises 206
2.3 Interacting Populations 206
2.3.1 Basic Tools for Nonlinear Systems 207
2.3.2 Predator-Prey Models 212
2.3.3 Competition Models 243
2.3.4 Modelling Symbiosis 256
2.3.5 Food Chains and Food Webs with Three Trophic Levels ... 257
2.3.6 Exercises 263

Appendix: Mathematical Ecology 268
1 Program Codes for the Mathematical Ecology Chapter 268
1.1 Exponential Growth 268
1.2 Cobwebbing 269
1.3 Nicholson-Bailey 272
1.4 Some Useful 2D Plots 274
2 Solutions 274

3 Structured Models in Ecology 297
3.1 Spatially Structured Models 297
3.1.1 Diffusion 298
3.1.2 Reaction Diffusion Equations 304
3.1.3 Boundary Conditions 305
3.1.4 Linear Models for Diffusion 306
3.1.5 Density-Dependent Diffusion 316
3.1.6 Correlated Random Walk 322
3.1.7 Spatial Steady States 339
3.1.8 Travelling Wave 341
3.1.9 Chemotaxis 348
3.1.10 Contact Process 350
3.1.11 Stochastic Predator-Prey Model 365
3.1.12 Conclusion 372
3.1.13 Exercises 374

3.2 Age, Size and Stage Structure 376
3.2.1 Life Tables 377
3.2.2 Leslie Model 379
3.2.3 Continuous Age Structured Models 380
3.2.4 Size and Stage Structure 390
3.2.5 Exercises 396
3.3 Sex Structure 399
3.3.1 Basic Model Approach 399

Appendix: Structured Models in Ecology 404
1 Solutions 404

4 Epidemiology 415
4.1 Deterministic Models for Homogeneous Populations 416
4.1.1 Kermack-McKendrick Model: SIR Model 416
4.1.2 SIR Model with Population Dynamic and Vaccination 422
4.1.3 Structured Population: Core Group Model 427
4.1.4 Estimations of the Reproduction Number 429
4.1.5 SISI Model with Bistability 440
4.1.6 Exercises 444
4.2 Stochastic Epidemic Models 445
4.2.1 SIS Model 445
4.2.2 Random Graphs and the Final Size of Epidemics 446
4.3 Age Structured Epidemic Models 450
4.3.1 Model and Reproduction Number 450
4.3.2 Stability Considerations for the Endemic Equilibrium 456
4.3.3 Indirect Effect of Vaccination 465
4.3.4 Optimal Vaccination Pattern 467

Appendix: Epidemiology 478
1 Solutions 478

5 Reaction Kinetics 483
5.1 Chemical Reactions 483
5.1.1 Law of Mass Action 483
5.1.2 Singular Perturbation Theory 488
5.1.3 Michaelis-Menten Enzyme Kinetics 492
5.1.4 Positive Cooperativity 498
5.1.5 Competitive Inhibitors of Enzymes 502
5.1.6 Noncompetitive Inhibitors of Enzymes 505
5.1.7 Goldbeter Model 507
5.1.8 Exercises 512
5.2 Gene Regulatory Networks 514
5.2.1 Genes, Transcription and Translation 515
5.2.2 Deterministic Models for Gene Expression 526
5.2.3 Feedback Systems 530

5.2.4 General Background: Dynamics Driven by Feedback Loops 542
5.2.5 Positive Feedback and Stochasticity 551
5.2.6 Application I: Violence of Lambda-Phages 556
5.2.7 Application II: Clock Model 561
5.2.8 Application III: Quorum Sensing 564
5.2.9 Exercises 580
5.3 Alternative Approaches for Regulatory Pathways 581
5.3.1 Boolean Networks 581
5.3.2 Petri Nets 587
5.3.3 Exercises 596
5.4 Pattern Formation 596
5.4.1 Turing Mechanism 596
5.4.2 Linear Stability Analysis for Diffusion-Driven Instability 597
5.4.3 Gierer-Meinhardt Model 601
5.4.4 Belousov-Zhabotinskii Reaction 603
5.4.5 Exercises 609

Appendix: Reaction Kinetics 610
1 Solutions 610

6 Neuronal Activity 633
6.1 Hodgkin-Huxley Model 633
6.2 Fitzhugh-Nagumo Model 638
6.2.1 Simplified Model for Neuronal Activity 639
6.3 Small Networks: Periodic Bursting 644
6.3.1 Self Inhibition 646
6.3.2 Time Scales and Averaging 647
6.4 Large Networks: Greenberg-Hastings Automata 649
6.4.1 Cellular Automata 650
6.4.2 Greenberg-Hastings Automata 651
6.4.3 Definitions for Greenberg-Hastings Automata 652
6.4.4 The Winding Number 656
6.4.5 The Potential 661
6.4.6 Survival of Pattern 665
6.5 Exercises 667

Appendix: Neuronal Activity 669
1 Solutions 669

7 Evolution 673
7.1 Population Genetics 674
7.1.1 Neutral Evolution 675
7.1.2 Fisher-Wright-Haldane Model 682

7.2 Adaptive Dynamics 685
7.2.1 Logistic Equation 686
7.2.2 Analysis of a Singular Point 689
7.3 Exercises 693

Appendix: Evolution 694
1 Solutions 694
