List of Figures	vii
List of Abbreviations	ix
1. Introduction	1
2. Background	5
2.1. Some liquid crystalline phases and their optical properties	5
2.1.1. Blue phases: distinguished mesophases	5
2.1.2. Optical properties of N, N* and BP	9
2.2. Electric field effects	12
2.2.1. Electro-optic Kerr effect	12
2.2.2. Electrostriction	15
2.2.3. Field-induced phase transitions	15
2.3. Liquid crystal displays	16
2.3.1. TN mode	16
2.3.2. VA mode	18
2.3.3. IPS mode	19
2.3.4. Cell design for blue phases	21
2.4. Polymerization	22
2.4.1. Initiation	23
2.4.2. Chain growth	24
2.4.3. Termination	25
2.5. Stabilization of the blue phase	26
2.5.1. Polymer-stabilized blue phase	27
2.5.2. Optimizing the electro-optic performance of PSBP	27
3. Experiments	29
3.1. Materials	29
3.1.1. Nematic liquid crystal	29
3.1.2. Chiral dopant	30
3.1.3. Monomers	31
3.1.4. Photo-initiator	32
3.1.5. Test cells	32
3.2. Sample preparation	33
3.2.1. Mixture preparation and processing	33
3.2.2. Preparation of test cells	34

Contents

3.3. Electro-optic measurements	34
3.3.1. Measurement of Bragg reflections	36
3.3.2. Static measurements	37
3.3.3. Dynamic measurements	39
3.4. Photo-DSC	40
3.4.1. Equipment and Experiment	40
3.4.2. Analysis of the photo-DSC data	41
4. Results and Discussion	43
4.1. Differences between unpolymerized and polymerized samples	43
4.1.1. Phase sequences of BP and PSBP mixtures	43
4.1.2. Anomalies affecting the Kerr measurement	49
4.1.3. Switching processes with different speed	52
4.1.4. Stability of polymer-stabilized blue phase	58
4.2. Influence of different parameters on the electro-optic performance	60
4.2.1. Chirality	60
4.2.2. Total monomer content	63
4.2.3. Cross-linker fraction	64
4.2.4. Different kinds of cross-linkers	66
4.2.5. Polymerization temperature	70
4.2.6. UV exposure time	73
5. Conclusions and Outlook	77
Appendix	81
A. Sample compositions	81
A.1. BP mixtures without monomers	81
A.2. PSBP mixtures with monomers	82
A.3. PSBP mixtures for the test series with varying sample composition	83
A.4. Mixture without monomers for test series with varying sample composition	86
B. Phase sequence and polymerization temperature of the mixtures	87
B.1. Individual mixtures	87
B.2. Mixtures for test series with monomer	88
B.3. Mixture for test series without monomers	90
B.4. Cells to test preparation conditions	90
C. Contributions in peer-reviewed journals	91
D. Conference contributions	91
D.1. Oral presentations	91
D.2. Poster presentations	92
Bibliography	93
