List of Contributors	xi
Introduction	xv
1 The Maturation of Immune Function in Pregnancy and Early Childhood	1
<i>Bianca Schaub and Susan L. Prescott</i>	
Introduction	1
Immune development in health and disease	2
Interplay of innate and adaptive immune regulation in organ-specific responses	4
Key influences and determinants of early immune function and regulation	5
Modulating early immune development to promote immune regulation	9
Conclusion	11
References	11
2 Immunological Aspects of the Atopic March	19
<i>Rob C. Aalberse and Paolo M. Matricardi</i>	
Introduction	19
Global inventory of the developmental pattern of allergen-specific antibody	19
Tentative interpretation of phases observed in the serological picture	20
The trends of IgE levels to allergenic sources	22
Immunoglobulin E trends examined at a molecular level	23
Discussion	29
References	29
3 Atopic Dermatitis in Infancy and Childhood	33
<i>U. Wahn, T. Keil, L. Grabenhenrich and T. Werfel</i>	
Definition	33
Family history and genetics	33
Natural history of disease	35
Allergic sensitization and allergy as comorbidity	36
Rhinitis and asthma as comorbidity	37
Urticaria as comorbidity	37
Determinants of the disease	37

Key elements of treatment	38
Prevention	39
Long-term outcome in adulthood	40
References	41
Further reading	43
4 Adverse Reactions to Food	45
<i>Birgit Ahrens, Hugh A. Sampson and Kirsten Beyer</i>	
Clinical presentation of food allergy in infancy	45
Epidemiology and natural course	47
Pathogenesis	49
Diagnostic	51
Therapy	55
Immunotherapy for food allergy	56
References	58
Further reading	63
5 Viral-Induced Wheeze and Asthma Development	65
<i>Amaziah Coleman and James E. Gern</i>	
Introduction	65
Longitudinal studies of childhood wheezing	65
Etiology of wheezing illnesses in infancy	66
Risk factors for virus-induced wheezing	68
Progression from virus-induced wheezing to asthma	70
Do severe viral respiratory infections in infancy cause asthma?	72
Conclusions	75
References	76
6 Infantile Lung Function and Airway Hyperresponsiveness	83
<i>Karin C. Lødrup Carlsen</i>	
Introduction	83
Lung development	84
Lung function measurements	84
Lung function development	86
Postnatal impact on lung function development	87
Factors that may influence in utero lung function development	91
Infantile AHR	92
Summary and conclusion	93
References	94
7 The Development of Allergic Rhinitis in Childhood	103
<i>U. Wahn, T. Keil and L. Grabenhenrich</i>	
Incidence	103
Period prevalence	105

Sex differences	105
Comorbidity	105
The role of sensitization	107
Early predictors	107
Protective factors	108
Principles of therapy	108
Options for prevention	109
References	110
Further reading	111
8 Genes and Atopic Phenotypes	113
<i>Kathleen C. Barnes</i>	
Introduction	113
Tools for disentangling the genetics of atopy	113
Do genes co-associated with multiple childhood atopy phenotypes represent atopic march candidate genes?	116
Summary and conclusions	120
References	121
9 Epigenetic Factors Before and After Birth	133
<i>Petra Ina Pfefferle and Harald Renz</i>	
Introduction	133
Principles of epigenetic mechanisms	134
Epigenetics in T-cell development as a decisive mechanism for allergy development	137
Epigenetic control in fetal immune development	139
Environmental factors and epigenetic modifications in early allergy development	140
Allergens as triggers for Th2 responses are associated with epigenetic modifications in target cells	140
Microbes in the human environment are capable to protect against allergy development via epigenetic mechanisms	141
Airborne, xenobiotic exposures act through epigenetic modulation and enhance early allergic development	143
Dietary and metabolic factors are capable to modify epigenetic programs	144
Conclusion	145
Abbreviations	146
References	147
10 The Physiological Induction of Tolerance to Allergens	153
<i>Mimi L.K. Tang</i>	
Introduction	153
Mechanisms of oral tolerance	154

Mechanisms of airway tolerance	160
Mechanisms of action of iTreg in mediating oral and airway tolerance	164
Early-life exposures can influence immune programming of tolerance	164
Summary	165
References	166
11 Microbiome and the Effect on Immune Response	171
<i>Maria C. Jenmalm and Bengt Björkstén</i>	
Introduction	171
Coevolutionary interdependency of the microbiome and the immune system	171
Microbiome acquisition and development	172
Effects of the microbiome on immune development	177
Influence of the microbiome on allergy development	179
Future perspectives	182
References	182
12 Indoor Allergen Exposure	195
<i>Susanne Lau and Magnus Wickman</i>	
Pet exposure	196
Preventive measures reducing pet allergen exposure	197
House dust mite	197
House dust mite avoidance	200
Cockroaches	201
Molds	201
Other allergens	202
Summary	202
References	203
13 Microbial Influences on the Development of Atopy	209
<i>Erika von Mutius</i>	
References	214
14 Role of Vaccines	219
<i>Christoph Grüber and Robert A. Wood</i>	
Introduction	219
Allergens that may be contained in vaccines	219
Allergic immune responses to vaccines	223
Immunization and development of allergy	223
Considerations for some specific vaccines	225
Diagnostic aspects	227
Identification of patients at heightened risk	228
Immunization of patients at heightened risk	228
Conclusion	229
References	229

15	Breast—Always Best?	235
	<i>Kirsi M. Järvinen, Karl E. Bergmann and Renate Bergmann</i>	
	Introduction	235
	Historical aspects	236
	Challenges with studies	237
	Evidence for breastfeeding in allergy prevention	238
	Possible mechanisms by which breastfeeding may protect against allergies	241
	Impact of maternal interventions during breastfeeding on prevention of allergy	248
	Conclusions	250
	Abbreviations	251
	References	251
16	Dietary Interventions in Infancy	261
	<i>M.M. Vonk, A.I. Kostadinova, M.V. Kopp, B.C.A.M. van Esch, L.E.M. Willemsen, L.M.J. Knippels and J. Garssen</i>	
	Introduction	261
	The gut, the diet, and oral tolerance in early life	262
	Allergens in the diet: from avoidance toward tolerance induction	263
	Immunomodulation via dietary interventions	265
	Conclusion	275
	Abbreviations	276
	References	277
17	Allergen Exposure and Avoidance as Part of Early Intervention and Prevention	285
	<i>Hasan Arshad and Thomas Platts-Mills</i>	
	Allergen avoidance	288
	Allergen exposure, sensitization, and disease	289
	House dust mite allergen avoidance in primary prevention	291
	Avoidance of other allergens	294
	Why environmental allergen avoidance in primary prevention is not effective	295
	Secondary avoidance	296
	Studies involving moving patients to a sanatorium or hospital	296
	Secondary allergen avoidance by making changes in the patient's own home	297
	References	298
18	Pharmacotherapies Early in Life to Prevent the Atopic March	303
	<i>Jonathan M. Spergel and John O. Warner</i>	
	Introduction	303
	Adverse effects of pharmacotherapies on allergy outcomes	307
	Prevention strategies	309
	Conclusions	315
	References	316

19	The Role of Antiviral Strategies for the Prevention of Childhood Asthma	321
	<i>Ronald B. Turner and Peter W. Heymann</i>	
	Introduction/Background	321
	General antiviral strategies to consider	322
	Lessons learned from antiviral strategies focused on RSV	323
	Antiviral strategies for rhinovirus	324
	Specific antivirals	326
	Asthma exacerbations provoked by rhinovirus in the atopic population	328
	Conclusions	330
	References	332
20	Prevention of Allergy/Asthma—New Strategies	337
	<i>Patrick Holt</i>	
	Introduction	337
	Asthma initiation during childhood	338
	Asthma genetics and environmental risk factors	338
	Major risk factors for atopic asthma operating during early life	338
	Timing is crucial	339
	Plasticity of clinical phenotypes in early life	339
	Postnatal allergen exposure and risk for allergic disease: is more worse, or better?	340
	Hidden complexities relating to effects of microbial exposures on atopic disease phenotypes	341
	Interactions between early infections and aeroallergen sensitization in driving development of allergic disease: atopic asthma as a paradigm	342
	Causal pathways for asthma development in childhood—development of a roadmap for rational design of early intervention strategies	342
	References	346
21	Antiallergic Strategies: Induction of Tolerance to Food	351
	<i>Gideon Lack, Alexandra Santos, Martin Penagos and Katrina Allen</i>	
	Introduction	351
	Definition of oral tolerance	351
	Immunological mechanisms of oral tolerance	352
	Clinical phenotypes of oral tolerance	352
	Risk and protective factors for food allergy	355
	Tolerance induction in the prevention of food allergy	357
	Allergen-specific immunotherapy in the management of food allergy	361
	Conclusion	370
	References	370
