Foreword (by Deborah Du Nann Winter)	xiii
Preface	xvii
Acknowledgments	xxi
About the Authors	xxv
PART 1 WHAT ON EARTH ARE WE DOING?	1
Chapter 1 There Are No <i>Environmental</i> Problems	3
Biology's Bottom Line: Carrying Capacity	5
Overconsumption: Our Ecological Footprint	11
Energy	12
Water	19
Food	21
Material Goods	25
Conclusion	29
Chapter 2 How Did We Get Here? From Western Thought to "Wise Use"	31
The Nature of Western Thought	34
Humans Are Separate from Nature	35
Nature Can and Should Be Controlled	38
Individuals Have a Right to Maximum Economic Gain	39
Progress Equals Growth	41
Divergent Voices	42
Environmentalism in the United States	43
Preservation and Conservation of Wilderness	43
The World Wars and Modern Living	46
Silent Spring and the Green Decade	55
Professional Environmentalism, Direct Action, and Wise Use	60
Partisan Policies and a Persistent Paradigm	62
Conclusion	63
Chapter 3 Where Do We Go from Here? Developing an Ecological Worldview	65
Ecological Principles	67
All Life Is Interdependent	68

Small Actions Can Cause Big Consequences	69
Life Systems Are Circular	70
There Are Limits to Growth	73
Diversity Equals Resilience	74
Upstream Solutions Are Better than Downstream Solutions	76
Living the Dream of a Sustainable World	79
Food	79
Interconnection	80
Circular Systems	80
Limits to Growth	83
Upstream Solutions	83
Diversity Is Resilience	84
Material Goods	87
Interconnection	87
Circular Systems	87
Limits to Growth	88
Upstream Solutions	89
Diversity Is Resilience	89
The Functions of Individual Behavior	90
Conclusion	91

PART 2 PSYCHOLOGY FOR A SUSTAINABLE FUTURE 93

Chapter 4	Psychology Can Help Save the Planet	95
	Growth in Green Psychology	97
	Psychology as a Sustainability Science	99
	What Psychologists Study: Operational Definitions of Variables	101
	Whom Psychologists Study: Participants	102
	How Psychologists Study: Research Designs	102
	Laboratory Experiments	103
	Correlational Studies	107
	Field Experiments	109
	Quasi-Experiments in the Field	111
	Running the Numbers: Statistical Analysis	112
	Measurement Tools for the Psychology of Sustainability	114
	Limits to Empiricism	119
	Conclusion	119
Chapter 5	The Power of the (Unsustainable) Situation	121
	Basics of Behavior Modification	122
	You Catch More Flies with Honey	124
	Timing Is Everything	125

The Short and Long of It	126
Old Habits Die Hard	127
Basics of Social Influence	128
We Do as Others Do	128
We Do as Others Push Us to Do	131
We Do What Makes Us Look Best	137
Engineering Sustainable Situations	139
Antecedent Strategies: What to Do and When to Do It	140
Information	140
Prompts	140
Modeling	141
Consequence Strategies: Was It Worth It?	141
Incentives	142
Informational Feedback	143
Social Feedback	143
Combining Contingencies	144
Conclusion	144
Chapter 6 It's Not Easy Thinking Green	147
Two Systems for Thinking	150
The Analytic System	150
The Automatic System	151
Careful Reasoning versus Quick Intuition	151
Cognitive Roots of Environmental Degradation	153
Perceptual Limits	153
Temporal Discounting	155
Affect	156
Availability Heuristic	158
Biases	160
Automaticity	163
Cognition for a Sustainable World	164
Raise Awareness	165
Increase Personal Relevance	167
Elicit Emotion	168
Encourage Intention	170
Provide Appropriate Knowledge	172
Moving toward a Greener World . . . Automatically	174
Conclusion	175
Chapter 7 Putting the "I" in Environment	177
How I Think	178
Knowledge	178
Beliefs	180

	Attitudes and Values	184
	Thinking Style	188
	Who I Am	191
	Personality	191
	Identity	195
	Gender	198
	Conclusion	200
Chapter 8	To Be (Green), or Not to Be (Green) . . . It's a Question of Motivation	203
	Motivation Grows from Within	204
	Seeded by Basic Needs	205
	Rooted in Core Values	209
	Planted in Perceptions of Control	212
	Situations Can Nurture Motivation	216
	Fairness Helps It Sprout	216
	Goals Direct Its Growth	220
	Feedback Is the Fertilizer	223
	Cultivating Change at Different Stages of Growth	226
	Conclusion	228
PART 3	WHAT'S GOOD FOR THE PLANET IS GOOD FOR US	229
Chapter 9	Making Ourselves Sick: Health Costs of Unsustainable Living	231
	Stressors in the Human Zoo	233
	Sleep Deprivation	234
	Overactivity and Inactivity	237
	Malnutrition	242
	Our Own Worst Enemy	247
	The Toxic Sea around Us	248
	Detecting Effects	249
	Disabilities and Disorders in Children	253
	Reproductive Abnormalities in Adults	257
	Health Hazards of Climate Change	259
	Conclusion	260
Chapter 10	Healing the Split between Planet and Self:	
	We All Need to Walk on the Wild Side	263
	The Ecological Unconscious and Biophilia	265
	Our Preference for Natural Settings	267
	Our Emotional Connection to Other Species	272
	Benefits of Contact with Nature	275

Improved Mental Health	275
Restorative Environments	277
Nature Therapies	281
Optimal Child Development	285
Playing in Nature	286
Learning to Love Nature	288
Conclusion: Reawakening the Ecological Unconscious	292
PART 4 GETTING PSYCHED FOR SUSTAINABILITY	295
Chapter 11 Getting Psyched for Sustainability: Being the Change We Want to See	297
Pursue a Positive Path to Sustainability	298
Visualize an Ecologically Healthy World	298
Use Meaningful Metrics	300
<i>Work</i> for Sustainability	302
Foster Resilience	304
Harness Human Nature	305
Act on Big Ideas via Small Steps	305
Go with the Evolutionary Flow	305
Develop New Heuristics	306
Leverage Moments of Flux	307
Create a Social Avalanche for Sustainability	308
Methodically Plan Change	308
Seek Opportunities to Lead	312
Seek Opportunities to Follow	315
Conclusion	317
Appendix: Self-Change Project	319
References	323
Name Index	389
Subject Index	405
