|--|-----------|
| Preface | ix |
| Preliminaries | ix |
| Overview of this book | ix |
| Part I | ix |
| Part II | xi |
| Part III | xii |
| Acknowledgements | xiii |
| 0 Introduction | 1 |
| Avoiding the paradox in set theory | 1 |
| Avoiding the paradox in type theory | 4 |
| The approach | 5 |
| I The Evolution of Type Theory until the 1940s | 7 |
| 1 Prehistory | 9 |
| 1a Paradox threats | 10 |
| 1b Paradox threats in formal systems | 11 |
| 1b1 Functions and their course of values | 12 |
| 1b2 The Russell Paradox in <i>Grundgesetze</i> | 15 |
| 1b3 How wrong was Frege? | 16 |
| 1b4 The importance of Russell's Paradox | 18 |
| 2 Type theory in Principia Mathematica | 19 |
| 2a Principia's propositional functions | 22 |
| 2a1 Definition | 22 |
| 2a2 Principia's propositional functions as λ -terms | 24 |
| 2a3 Principia's pfs and their translation in λ -calculus | 26 |
| 2a4 Principia's related notions | 29 |

| | | |
|--|--|------------|
| 2a5 | Principia's substitution | 31 |
| 2b | The Ramified Theory of Types RTT | 35 |
| 2b1 | Types | 35 |
| 2b2 | Formalisation of the Ramified Theory of Types | 40 |
| 2b3 | Discussion and examples | 43 |
| 2c | Properties of RTT | 49 |
| 2c1 | Types and free variables | 49 |
| 2c2 | Strong normalisation | 51 |
| 2c3 | Subterm property | 58 |
| 2d | Legal propositional functions | 59 |
| | Conclusions | 65 |
| 3 | Deramification | 69 |
| 3a | History of the deramification | 70 |
| 3a1 | The problematic character of RTT | 70 |
| 3a2 | The Axiom of Reducibility | 72 |
| 3a3 | Deramification | 74 |
| 3b | The Simple Theory of Types STT | 76 |
| 3b1 | Constructing the Simple Theory of Types from RTT | 76 |
| 3b2 | Church's simply typed λ -calculus λ_{\rightarrow} Church | 77 |
| 3b3 | Comparison of RTT with λ_{\rightarrow} Church | 79 |
| 3b4 | Comparison of STT with λ_{\rightarrow} Church | 79 |
| 3c | Are orders to be blamed? | 81 |
| 3c1 | Kripke's Theory of Truth KTT | 82 |
| 3c2 | RTT in KTT | 86 |
| 3c3 | Orders and types | 99 |
| | Conclusions | 100 |
| II Propositions as Types, Pure Type Systems, AUTOMATH | | 103 |
| 4 | Propositions as Types and Pure Type Systems | 105 |
| 4a | Propositions as Types and Proofs as Terms (PAT) | 106 |
| 4a1 | Intuitionistic logic | 106 |
| 4a2 | The discovery of PAT: Curry | 107 |
| 4a3 | The discovery of PAT: Howard | 110 |
| 4a4 | The discovery of PAT: de Bruijn | 111 |
| 4b | Lambda calculus | 112 |
| 4c | Pure Type Systems | 116 |
| 4c1 | The Barendregt cube | 118 |
| 4c2 | Metaproperties of PTSs | 121 |

| | | |
|----------|--|------------|
| 5 | The pre-PAT RTT and STT in PAT-style | 125 |
| 5a | RTT in PAT style | 125 |
| 5a1 | An introduction to λ RTT | 126 |
| 5a2 | The system λ RTT | 132 |
| 5a3 | Meta-properties of λ RTT | 136 |
| 5a4 | Interpreting RTT in λ RTT | 139 |
| 5a5 | Logic in RTT and λ RTT | 144 |
| 5a6 | Various implementations of PAT | 146 |
| 5b | STT in PAT style | 150 |
| | Conclusions | 151 |
| 6 | A Correspondence between RTT and the system Nuprl | 153 |
| 6a | On the role of orders | 154 |
| 6b | The Nuprl type system | 156 |
| 6b1 | A fragment of Nuprl in PTS-style | 157 |
| 6b2 | Orders in Nuprl | 162 |
| 6b3 | Evaluating the order of a Nuprl term | 165 |
| 6c | RTT in Nuprl | 168 |
| 6c1 | Ramified Types in Nuprl | 168 |
| 6c2 | Propositional Functions of RTT in Nuprl | 171 |
| | Conclusions | 173 |
| 7 | Automath | 179 |
| 7a | Description of AUTOMATH | 182 |
| 7a1 | Books, lines and expressions | 182 |
| 7a2 | Correct books | 189 |
| 7a3 | Definitional equality | 191 |
| 7a4 | Some elementary properties | 193 |
| 7b | From AUT-68 towards a PTS | 194 |
| 7b1 | The choice of the correct formation (II) rules and the parameter types $\forall x:A.B$ | 195 |
| 7b2 | The different treatment of constants and variables | 198 |
| 7b3 | The definition system and the translation using \S | 198 |
| 7c | λ 68 | 200 |
| 7c1 | Definition and elementary properties | 200 |
| 7c2 | Reduction and conversion | 206 |
| 7c3 | Subject reduction | 212 |
| 7c4 | Strong normalisation | 216 |
| 7c5 | The formal relation between AUT-68 and λ 68 | 220 |
| 7d | More Suitable Pure Type Systems for AUTOMATH | 223 |
| 7d1 | λ 68 with parameters, II-reduction and II-application | 224 |

| | | |
|--|---|------------|
| 7d2 | AUT-QE | 225 |
| 7d3 | $\Delta\Lambda$ | 227 |
| | Conclusions | 229 |
| III Extensions of Pure Type Systems | | 231 |
| 8 | Pure Type Systems with definitions | 233 |
| 8a | Definitions in contexts | 234 |
| 8a1 | Comparison with the definitions of AUTOMATH | 237 |
| 8b | Definitions in the terms and the contexts | 238 |
| 8b1 | Comparison with the definitions of AUTOMATH | 238 |
| | Conclusions | 240 |
| 9 | The Barendregt cube with parameters | 243 |
| 9a | On parameters in the Barendregt cube | 244 |
| 9b | The Barendregt cube refined with parameters | 250 |
| | Conclusions | 253 |
| 10 | Pure Type Systems with parameters and definitions | 255 |
| 10a | Parametric constants and definitions | 256 |
| 10b | Properties of terms | 270 |
| 10b1 | Basic properties | 270 |
| 10b2 | Church-Rosser for $\rightarrow_{\beta\delta}$ | 273 |
| 10b3 | Strong normalisation for \rightarrow_{δ} | 278 |
| 10c | Properties of legal terms | 281 |
| 10d | Restrictive use of parameters | 290 |
| 10d1 | $\vec{C}\vec{D}$ -PTSs with restricted parameters | 292 |
| 10d2 | Imitating parameters by λ -abstractions | 294 |
| 10d3 | Refined Barendregt cubes | 297 |
| 10e | Systems in the refined Barendregt cube | 298 |
| 10e1 | ML | 299 |
| 10e2 | LF | 299 |
| 10e3 | λ_{68} and AUT-68 | 300 |
| 10e4 | λ_{QE} and AUT-QE | 301 |
| 10e5 | PAL | 302 |
| 10f | First-order predicate logic | 303 |
| | Conclusions: Yet another extension of PTSs? | 307 |
| | Practical motivation | 307 |
| | The heart of type theory | 308 |
| | Future work | 310 |

| | | |
|----------|--|------------|
| A | Type systems in this book | 311 |
| Aa | Pure Type Systems | 311 |
| Ab | The Barendregt cube | 312 |
| Ac | The Ramified Theory of Types | 314 |
| Ac1 | RTT | 314 |
| Ac2 | λ RTT | 317 |
| Ad | The Simple Theory of Types | 318 |
| Ad1 | STT | 318 |
| Ad2 | λ STT | 320 |
| Ae | Church's simply typed λ -calculus λ_{\rightarrow} Church | 321 |
| Af | A fragment of Nuprl in PTS-style | 322 |
| Ag | AUTOMATH | 324 |
| Ag1 | AUT-68 | 324 |
| Ag2 | λ 68 | 326 |
| Ah | Pure Type Systems with definitions | 328 |
| Ah1 | PTSs with definitions in contexts | 328 |
| Ah2 | PTSs with definitions in the terms and the contexts | 330 |
| Ai | Pure Type Systems with parametric constants | 332 |
| Aj | A $\vec{C}\vec{D}$ -PTS and its subsystems | 333 |
| Aj1 | PTSs with parameters and definitions | 333 |
| Aj2 | PTSs with restricted parameters and definitions | 335 |
| | Bibliography | 337 |
| | Subject Index | 349 |
| | Name Index | 355 |
| | List of Figures | 357 |
