Preface **xix**

1. A SURVEY OF EYE MOVEMENTS: CHARACTERISTICS AND TELEOLOGY **1**

WHY STUDY EYE MOVEMENTS? 2

VISUAL REQUIREMENTS OF EYE MOVEMENTS 3

FUNCTIONAL CLASSES OF EYE MOVEMENTS 4

ORBITAL MECHANICS: PHASIC AND TONIC INNERVATION 6

FORGING THE COMMAND FOR EYE MOVEMENTS: THE NEURAL INTEGRATOR 7

VESTIBULAR AND OPTOKINETIC SYSTEMS 7

The Vestibulo-Ocular Reflex: Responses to Brief Rotational and Linear Head Movements • Eye Movements in Response to Sustained Rotations: The Optokinetic System

SACCADIC SYSTEM 10

Quick Phases • Voluntary Saccades

SMOOTH PURSUIT AND VISUAL FIXATION 12

Smooth Pursuit • Visual Fixation • Similarities and Differences Between Fixation, Smooth Pursuit, and Optokinetic Eye Movements

COMBINED MOVEMENTS OF THE EYES AND HEAD 14

VERGENCE EYE MOVEMENTS 15

ADAPTIVE CONTROL OF EYE MOVEMENTS AND THE CEREBELLUM 16

VOLUNTARY CONTROL OF EYE MOVEMENTS 17

EYE MOVEMENTS AND SPATIAL LOCALIZATION 19

THE SCIENTIFIC METHOD APPLIED TO THE STUDY OF EYE MOVEMENTS 19

2. THE OCULAR MOTOR PERIPHERY **24**

THE ROLE OF THE OCULAR MOTOR PERIPHERY 24

THE KINEMATICS OF EYE ROTATION 25

THE EYEBALL AND ITS ATTACHMENTS: FASCIA AND EXTRAOCULAR MUSCLES 27

EMBRYOLOGY OF THE EXTRAOCULAR MUSCLES AND THEIR
INNERVATION 31

CHARACTERISTICS OF EXTRAOCULAR MUSCLE FIBERS 33
Differences from Skeletal Muscle • Different Forms of Extraocular Muscle Fiber

ELECTROPHYSIOLOGICAL CHARACTERISTICS OF EXTRAOCULAR
MUSCLE FIBERS 38

EXTRAOCULAR MUSCLE PROPRIOCEPTION 40

INNERVATION OF THE EXTRAOCULAR MUSCLES: ANATOMY OF
OCULAR MOTOR NERVES AND THEIR NUCLEI 42

Anatomy of the Abducens Nerve • Anatomy of the Trochlear Nerve • Anatomy of the
Oculomotor Nerve

QUANTITATIVE DESCRIPTIONS OF THE ORBITAL
CONTENTS 48

3. THE VESTIBULAR-OPTOKINETIC SYSTEM 55

FUNCTION OF THE VESTIBULAR-OPTOKINETIC SYSTEM 57

Head Rotations and Translations • Tilt Versus Translation Ambiguity • Vestibular-Visual Symbiosis

ANATOMY AND PHYSIOLOGY OF THE PERIPHERAL
VESTIBULAR SYSTEM 61

The Structure of the Labyrinth • The Blood Supply and Innervation of the Labyrinth • The
Mechanical Properties of the Semicircular Canals and Otolith Organs • Neural Activity in Vestibular
Afferents • Different Classes of Vestibular Afferents

BRAINSTEM ELABORATION OF THE VESTIBULO-OCULAR REFLEX 69

Anatomic Organization of the Vestibulo-Ocular Reflex • Vertical Semicircular Canal
Projections • Horizontal Semicircular Canal Projections • Otolith Projections • Neurophysiology
of the Vestibulo-Ocular Reflex • The Velocity-Storage Mechanism

NEURAL SUBSTRATE FOR OPTOKINETIC RESPONSES 79

QUANTITATIVE ASPECTS OF THE VESTIBULAR-OPTOKINETIC SYSTEM 80

Vestibulo-Ocular Reflexes, Gain, Direction, and Phase: General Characteristics •
Determinants of VOR Gain: Rotational VOR • Determinants of VOR Gain: Translational
VOR • Determinants of VOR Gain: Eccentric Rotation • Determinants of VOR Gain: Direction
and the Axis of Eye Rotation • Determinants of VOR Phase and Time Constant • Optokinetic
Nystagmus • Optokinetic After-Nystagmus • Cervico-Ocular Reflex

ADAPTIVE PROPERTIES OF THE VESTIBULO-OCULAR REFLEX 95

Vestibulo-Ocular Reflex Habituation • Short-Term VOR Adaptation that Produces the Reversal
Phases of Nystagmus • Visually Induced Adaptation of the VOR • Mechanisms of Recovery from
Lesions in the Labyrinth

INFLUENCES OF THE VESTIBULOCEREBELLUM ON THE
VESTIBULO-OCULAR REFLEX 104

Anatomical Pathways by Which the Vestibulocerebellum Influences the VOR • Electrophysiological
Aspects of Vestibulocerebellum Control of the VOR • Effects of Vestibulocerebellar Lesions on the
Vestibulo-Ocular Reflex • Role of Cerebellum in Vestibulo-Ocular Reflex Adaptation

VESTIBULAR SENSATION AND THE ROLE OF THE CEREBRAL HEMISPHERES IN THE VESTIBULO-OCULAR REFLEX 108

CLINICAL EXAMINATION OF VESTIBULAR AND OPTOKINETIC FUNCTION 112

General Principles for Evaluating Vestibular Disorders • History Taking in Patients with Vestibular Disorders • The Clinical Examination of Patients with Vestibular Disorders

LABORATORY EVALUATION OF VESTIBULAR AND OPTOKINETIC FUNCTION 121

Quantitative Caloric Testing • Magnetic Field Stimulation • Quantitative Rotational Testing • Quantitative Head Impulse Testing • Testing Otolith-Ocular Responses • Optokinetic Testing

PATHOPHYSIOLOGY OF DISORDERS OF THE VESTIBULAR SYSTEM 128

Pathophysiology of Acute Unilateral Disease of the Labyrinth or Vestibular Nerve • Pathophysiology of Bilateral Loss of Vestibular Function • Pathophysiology of Lesions of Central Vestibular Connections • Pathophysiology of Disorders of the Optokinetic System

4. THE SACCADIC SYSTEM 169

THE PURPOSE OF SACCADES 170

BEHAVIOR OF THE SACCADIC SYSTEM 171

Saccadic Velocity and Duration • Saccadic Waveform • Saccadic Trajectory • Saccadic Reaction Time (Latency) • Saccadic Accuracy • Quantitative Aspects of Quick Phases of Nystagmus • Ballistic Nature of Saccadic Movements • Saccades During Visual Search • Saccades During Reading • Visual Consequences of Saccades

NEUROPHYSIOLOGY OF SACCADIC EYE MOVEMENTS 189

Brainstem Pathways for Saccades • Inputs to the Brainstem Saccadic Pulse Generator from Cerebral Cortex • Superior Colliculus • The Role of the Frontal Lobe • The Role of the Parietal Lobe • Summary of Fronto-Parietal Influences on the Control of Saccades • The Role of the Thalamus • The Role of the Basal Ganglia • The Cerebellar Contribution to Saccades

MODELS FOR SACCADE GENERATION 228

Models for Horizontal Saccades • Models for Oblique Saccades • Neuromimetic Models for Saccades in Two and Three Dimensions

ADAPTIVE CONTROL OF SACCADIC ACCURACY 233

Saccadic Adaptation Following Ocular Motor Palsy • Experimentally Induced Saccadic Adaptation • Neural Substrate For Saccadic Adaptation

SACCADES AND MOVEMENTS OF THE EYELIDS 240

EXAMINATION OF SACCADES 243

Clinical Examination of Saccades • Measurement of Saccades

PATHOPHYSIOLOGY OF ABNORMALITIES OF SACCADES 245

Disorders of Saccadic Velocity • Disorders of Saccadic Accuracy • Prematurely Terminated Saccades • Disorders of Initiation of Saccades • Inappropriate Saccades: Saccadic Intrusions and Oscillations

5. SMOOTH VISUAL TRACKING AND FIXATION 289

THE NEED FOR SMOOTH VISUAL TRACKING 290

VISUAL FIXATION: AN OCULAR MOTOR BALANCING ACT 291

Relationship Between Fixational Eye Movements and Smooth Ocular Tracking

BEHAVIORAL PROPERTIES OF SMOOTH VISUAL TRACKING EYE MOVEMENTS 296

The Visual Stimuli for Smooth Visual Tracking • Dynamic Properties of Smooth-Pursuit Eye Movements • Properties of Optokinetic Responses • Smooth Pursuit to Predictable Target Motion

ADAPTIVE PROPERTIES OF SMOOTH PURSUIT 309

NEURAL SUBSTRATE FOR SMOOTH VISUAL TRACKING 310

Primary Visual Cortex and Smooth Pursuit • Contributions of the Middle Temporal Visual Area • Contributions of the Medial Superior Temporal Visual Area • Contribution of Posterior Parietal Cortex • The Frontal Lobes • Contributions of the Frontal Eye Fields (Frontal Pursuit Area) • Contributions of the Supplementary Eye Field • Contributions of Other Cortical Areas to Smooth Tracking • Contribution of the Basal Ganglia to Smooth Pursuit • Neural Substrate for the Components of Predictive Pursuit • Descending Pursuit Pathways to the Pontine Nuclei • The Cerebellar Contribution • The Accessory Optic System and Nucleus of the Optic Tract • The Neural Substrate for Adaptation of Smooth-Tracking Responses • Summary of Descending Pathways for Smooth Pursuit

MODELS OF SMOOTH PURSUIT 327

Simple Negative Feedback Models • Limitations of Negative Feedback Models: The Need for Efference Copy • Models that Account for the Predictive Properties of Smooth Pursuit

CLINICAL EXAMINATION OF FIXATION AND SMOOTH PURSUIT 331

Examining Fixation • Examining Smooth Pursuit

LABORATORY EVALUATION OF FIXATION AND SMOOTH PURSUIT 332

ABNORMALITIES OF VISUAL FIXATION AND SMOOTH PURSUIT 333

Abnormalities of Visual Fixation • Abnormalities of Smooth Pursuit • Smooth Pursuit and Visual Fixation Abnormalities Accompanying Failure of Development of Binocular Vision

6. GAZE HOLDING AND THE NEURAL INTEGRATOR 360

NEURAL CODING OF THE OCULAR MOTOR SIGNAL 362

The Need for a Neural Integrator of Ocular Motor Signals • Special Demands on the Neural Integrator

QUANTITATIVE ASPECTS OF NEURAL INTEGRATION 365

NEURAL SUBSTRATE FOR GAZE HOLDING 367

The Contribution of the Nucleus Prepositus Hypoglossi and Medial Vestibular Nucleus to Gaze Holding • The Interstitial Nucleus of Cajal and Vertical Gaze Holding • The Contribution of the Cerebellum to Gaze Holding • How a Network of Neurons Could Function as the Neural Integrator

CLINICAL EVALUATION OF GAZE HOLDING 375

LABORATORY EVALUATION OF GAZE HOLDING 376

**ABNORMALITIES OF THE NEURAL INTEGRATOR: GAZE-EVOKED
NYSTAGMUS 377**

Pathogenesis of Deficient Neural Integration • Pathogenesis of Centripetal Nystagmus and Rebound Nystagmus

7. THE NEURAL BASIS FOR CONJUGATE EYE MOVEMENTS 386

A WORKING HYPOTHESIS TO ACCOUNT FOR THE CONTROL OF GAZE 387

BRAINSTEM CIRCUITS FOR HORIZONTAL CONJUGATE MOVEMENTS 387

A Basic Circuit for the Control of Horizontal Conjugate Gaze • How Constituent Signals Are Synthesized into a Conjugate Horizontal Gaze Command • Interpreting the Effects of Discrete Lesions on Pathways for Horizontal Gaze

BRAINSTEM CIRCUITS FOR VERTICAL AND TORSIONAL MOVEMENTS 395

Rostral Interstitial Nucleus of the Medial Longitudinal Fasciculus (RIMLF): The Substrate for Vertical Saccades • Interpretation of Effects of Discrete Lesions on Substrate for Vertical Saccades • The Interstitial Nucleus of Cajal (INC): Substrate for Vertical Gaze Holding • Interpretation of Effects of Discrete Lesions on Substrate for Vertical Gaze Holding • The Neural Substrate for Vertical Vestibular and Smooth Pursuit Movements • Interpretation of Effects of Discrete Lesions on Substrate for Vertical Pursuit and Vestibular Eye Movements • Other Midbrain Neurons that May Contribute to Control of Vertical Gaze • Coordination of Eyelid Movements with Vertical Saccades • A Mechanism for Monitoring the Fidelity of Gaze

CEREBELLAR INFLUENCES ON GAZE 406

Contributions of the Flocculus and Paraflocculus • Interpretation of Effects of Discrete Lesions on the Flocculus and Paraflocculus • Contributions of the Nodulus and Ventral Uvula • Interpretation of Effects of Discrete Lesions of the Nodulus and Ventral Uvula • Contributions of the Dorsal Vermis • Interpretation of Effects of Discrete Lesions of the Dorsal Vermis • Contributions of the Fastigial Nucleus • Interpretation of Effects of Discrete Lesions of the Fastigial Nucleus • Contributions of the Cerebellar Hemispheres and Dentate Nucleus to the Control of Eye Movements • The Role of the Inferior Olivary Nucleus and Cerebellum in Gaze Control

**THE INFLUENCE OF THE CEREBRAL HEMISPHERES AND BASAL GANGLIA
ON THE CONTROL OF EYE MOVEMENTS 416**

Approaches to Studying the Cerebral Control of Gaze • Contributions of Posterior Cortical Areas • Primary Visual Cortex and Gaze Control • Contributions of Secondary Visual Areas • Contributions of the Temporal Lobe • Contributions of the Parietal Lobe to Gaze Control • Contributions of the Posterior Parietal Cortex • Contributions of the Pulvinar to Gaze Control • Contributions of the Frontal Lobe to Gaze Control • Contributions of the Frontal Eye Field (FEF) • Contributions of the Supplementary Eye Field (SEF) • Contributions of the Dorsolateral Prefrontal Cortex (DLPC) • Role of Anterior Cingulate Cortex (ACC) • Contributions of the Thalamic Nuclei • Descending Parallel Pathways that Control Gaze

8. EYE-HEAD MOVEMENTS 474

OCULAR MOTOR AND CEPHALOMOTOR SYSTEMS 474

GEOMETRY AND KINEMATICS OF HEAD ROTATION 475

HEAD AND GAZE STABILIZATION 476

Mechanical Properties of the Head and Neck Tissues • Stabilization of the Head During Natural Activities • Head Stability in Eccentric Positions • Visual Consequences of Head Translations: Motion Parallax

RAPID GAZE SHIFTS ACHIEVED BY COMBINED EYE-HEAD MOVEMENTS 479

Behavioral Properties • Neural Substrate for Rapid Eye-Head Gaze Shifts • Models for Eye-Head Saccades

SMOOTH TRACKING WITH EYES AND HEAD 494

Behavioral Properties • Neural Substrate for Smooth Eye-Head Pursuit

EXAMINATION OF EYE-HEAD MOVEMENTS 499

LABORATORY EVALUATION OF EYE-HEAD MOVEMENTS 500

DISORDERS OF EYE-HEAD MOVEMENT 502

Disorders of Head and Gaze Stabilization • Disorders of Voluntary Head and Gaze Control • Eye-Head Strategies in Patients with Abnormal Saccades • Smooth Head Tracking Disorders

9. VERGENCE EYE MOVEMENTS 520

THE ROLE OF VERGENCE EYE MOVEMENTS 521

VERGENCE AND SENSORY FUSION 522

STIMULI TO VERGENCE MOVEMENTS 523

Fusional Vergence • Accommodative Vergence • Interactions Between Accommodation and Vergence

DYNAMIC PROPERTIES OF VERGENCE MOVEMENTS 524

Horizontal Vergence • Vertical Vergence and Cyclovergence • Vergence Responses to Natural Stimuli • Properties of Vergence Made in Conjunction with Other Eye Movements

NEURAL SUBSTRATE OF VERGENCE MOVEMENTS 535

Ocular Motoneurons and Vergence • Premotor Commands for Vergence in the Midbrain • Premotor Commands for Vergence in the Pons • Influence of the Cerebellum on Vergence • Cerebral Control of Vergence

CONCEPTUAL MODELS OF SUPRANUCLEAR CONTROL OF VERGENCE 542

ADAPTIVE MECHANISMS TO MAINTAIN OCULAR ALIGNMENT 544

Phoria Adaptation • Disconjugate Adaptation

EXAMINATION OF VERGENCE MOVEMENTS 549

Vergence Induced by Combined Disparity-Accommodation Stimuli • Testing Vergence Responses to Disparity Stimuli • Testing Vergence Responses to Accommodative Stimuli

LABORATORY TESTING OF VERGENCE EYE MOVEMENTS 550

ABNORMALITIES OF VERGENCE 550

Development Disorders of Vergence • Acquired Disorders of Vergence • Effects of Convergence on Conjugate Forms of Nystagmus

10. DIAGNOSIS OF PERIPHERAL OCULAR MOTOR PALSIES AND STRABISMUS 569

PHYSIOLOGIC BASIS FOR CLINICAL TESTING OF DIPLOPIA: CONJUGATE MOVEMENTS: YOKE MUSCLE PAIRS 570

Law of Reciprocal Innervation • Hering's Law of Motor Correspondence • Deviations of the Visual Axes: Definitions

CLINICAL TESTING IN DIPLOPIA 571

History: The Symptomatology of Strabismus • The Examination in Strabismus

PATHOPHYSIOLOGY OF SOME CLINICAL SIGNS THAT COMMONLY ACCOMPANY STRABISMUS 581

Primary and Secondary Deviation • Past-Pointing and Disturbance of Egocentric Localization • Head Tilts and Turns • Dynamic Properties of Eye Movements in Paralytic Strabismus

CLINICAL FEATURES AND DIAGNOSIS OF CONCOMITANT STRABISMUS 584

Patterns of Occurrence of Concomitant Strabismus • Characteristics of Misalignment in Patients with Childhood Strabismus • Dynamic Properties of Eye Movements in Patients with Childhood Strabismus • Pathogenesis of Childhood Strabismus

CLINICAL FEATURES OF OCULAR NERVE PALSIES 588

ABDUCENS NERVE PALSY 589

Clinical Features of Abducens Nerve Palsy • Disorders Affecting the Abducens Nucleus: Horizontal Gaze Palsy • Disorders Affecting the Abducens Fascicles • Disorders Affecting the Subarachnoid Portion of the Abducens Nerve • Disorders Affecting the Petrous Portion of the Abducens Nerve • Disorders Affecting the Cavernous Portion of the Abducens Nerve • Bilateral Abducens Nerve Palsy • Abducens Nerve Palsy in Children • Management of Abducens Nerve Palsy

TROCHLEAR NERVE PALSY 597

Clinical Features of Trochlear Nerve Palsy • Disorders Affecting the Trochlear Nucleus and Fascicles • Trochlear Nerve Palsy Due to Head Trauma • Other Common Causes of Trochlear Nerve Palsy • Congenital Trochlear Nerve Palsy • Management of Trochlear Nerve Palsy • Brown's Syndrome • Superior Oblique Myokymia

OCULOMOTOR NERVE PALSY 603

Clinical Features of Oculomotor Nerve Palsy • Nuclear Oculomotor Nerve Palsy • Congenital Oculomotor Nerve Palsy • Disorders Affecting the Fascicles of the Oculomotor Nerve • Disorders Affecting the Subarachnoid Portion of the Oculomotor Nerve • Compression of the Oculomotor Nerve at the Tentorial Edge • Disorders Affecting the Cavernous Portion of the Oculomotor Nerve • Infarction of the Oculomotor Nerve • Oculomotor Nerve Palsy Due to Trauma • Aberrant Regeneration of the Oculomotor Nerve • Partial Oculomotor Nerve Palsy • Management of Oculomotor Nerve Palsy

MULTIPLE OCULAR MOTOR NERVE PALSIES 610

Brainstem Lesions Causing Ophthalmoplegia • Amyotrophic Lateral Sclerosis (ALS) • Cavernous Sinus and Superior Orbital Fissure Syndromes • Head Trauma and Ophthalmoplegia • Neuropathies Causing Ophthalmoplegia • Ocular Neuromyotonia

DISORDERS OF THE NEUROMUSCULAR JUNCTION 615

Systemic Botulism • Botulinum Toxin as Therapy for Abnormal Eye Movements • The Lambert-Eaton Myasthenic Syndrome • Myasthenia Gravis

CHRONIC PROGRESSIVE EXTERNAL OPHTHALMOPLÉGIA AND RESTRICTIVE OPHTHALMOPATHIES 623

Involvement of the Extraocular Muscles in Muscular Dystrophies • Kearns-Sayre Syndrome and Disorders of Mitochondrial DNA

THYROID-ASSOCIATED OPHTHALMOPATHY 627

ACQUIRED RESTRICTIVE OPHTHALMOPATHY 629

CONGENITAL CRANIAL DYSINNERVATION DISORDERS (CCDD) AND CONGENITAL FIBROSIS OF THE EXTRAOCULAR MUSCLES 629

11. DIAGNOSIS OF NYSTAGMUS AND SACCADIC INTRUSIONS 657

AN APPROACH TO THE PATIENT WITH NYSTAGMUS 658

Characteristics of the Nystagmus • Influence of Eye Position (Gaze Angle) on the Direction of Nystagmus • Coordinate Systems and the Evaluation of Nystagmus • Summary of System for Interpreting the Examination of Nystagmus • How Measuring Eye Movements Aids Diagnosis of Nystagmus, Saccadic Intrusions, and Oscillations • Visual Consequences of Nystagmus • Overview of Pathogenesis of Nystagmus: Disturbance of Three Mechanisms that Normally Hold Gaze Steady

NYSTAGMUS DUE TO VESTIBULAR IMBALANCE 666

Nystagmus Caused by Peripheral Vestibular Disorders • Nystagmus Caused by Disorders of Central Vestibular Circuits • Periodic Alternating Nystagmus • Seesaw and Hemi-Seesaw Nystagmus

NYSTAGMUS OCCURRING WHEN THE EYES ARE IN ECCENTRIC GAZE 688

Gaze-Evoked Nystagmus • Differences Between Physiologic “End-Point” Nystagmus and Pathologic Gaze-Evoked Nystagmus • Bruns Nystagmus • Centripetal and Rebound Nystagmus

NYSTAGMUS OCCURRING IN ASSOCIATION WITH DISEASE OF THE VISUAL SYSTEM 692

Pathogenesis of Nystagmus Occurring with Visual System Disorders • Clinical Features of Nystagmus in Association with Visual System Disease

ACQUIRED PENDULAR NYSTAGMUS AND ITS RELATIONSHIP TO VISUAL PATHWAYS 696

Clinical Characteristics of Acquired Pendular Nystagmus • Acquired Pendular Nystagmus with Demyelinative Disease • Oculopalatal Tremor (Myoclonus)

CONVERGENT-DIVERGENT FORMS OF NYSTAGMUS 704

Convergent-Divergent Pendular Oscillations • Vertical Jerk Nystagmus with a Convergent-Divergent Horizontal Component • Convergence-Retraction Nystagmus

CONGENITAL FORMS OF NYSTAGMUS 706

The Nature of Congenital Ocular Oscillations • Infantile Nystagmus Syndrome (INS) or Congenital Nystagmus • Fusional Maldevelopment Nystagmus Syndrome (FMNS) and Latent Nystagmus • Spasmus Nutans Syndrome

LID NYSTAGMUS 716

SACCADIC INTRUSIONS AND OSCILLATIONS 716

Recognizing Saccadic Intrusions and Oscillations • Square-Wave Jerks • Macrosaccadic Oscillations • Saccadic Pulses, Ocular Flutter, and Opsoclonus • Pathogenesis of Saccadic Intrusions

TREATMENTS FOR NYSTAGMUS AND SACCADIC INTRUSIONS 727

Rational Therapy of Abnormal Eye Movements: Identifying What to Treat • Pharmacological Treatments of Abnormal Eye Movements • Rationale for Drug Treatments of Nystagmus • Treatment of Peripheral Vestibular Forms of Nystagmus • Treatment of Downbeat and Upbeat Nystagmus • Treatment of Periodic Alternating Nystagmus • Treatment of Acquired Pendular Nystagmus • Treatment of Seesaw and Hemi-Seesaw Nystagmus • Treatment of Nystagmus in Episodic Ataxia Type 2 • Drug Treatment of Congenital Forms of Nystagmus • Treatment of Saccadic Intrusions and Oscillations • Optical Treatments of Abnormal Eye Movements • Procedures to Weaken the Extraocular Muscles • Application of Somatosensory or Auditory Stimuli to Suppress Nystagmus

12. DIAGNOSIS AND MANAGEMENT OF VESTIBULAR DISORDERS 769

VERTIGO AND DIZZINESS 772

Clinical Features of Acute Peripheral Vestibulopathy

ACUTE VERTIGO 777

Infections Causing Acute Vertigo • Trauma Causing Vertigo • Tullio Phenomenon • Toxic Causes of Vertigo

RECURRENT VERTIGO 782

Ménière's Syndrome • Otosclerosis • Inflammatory Disorders Causing Recurrent Vertigo • Migraine and Recurrent Vertigo: Vestibular Migraine • Vascular Disorders and Recurrent Vertigo • Epilepsy, Hyperventilation, and Other Miscellaneous Causes of Vertigo • Undiagnosed Recurrent Vertigo

POSTURALLY INDUCED VERTIGO 789

Benign Paroxysmal Positional Vertigo (BPPV) • Other Causes of Positional Vertigo

TREATMENT OF VERTIGO 796

OSCILLOPSIA 801

Oscillopsia Due to an Abnormal VOR • Oscillopsia Due to Paresis of Extraocular Muscles • Oscillopsia Due to Nystagmus and Other Abnormal Eye Movements

SKEW DEVIATION AND THE OCULAR TILT REACTION (OTR) 804

Clinical Features of Skew Deviation and OTR • Topologic Diagnosis of Skew Deviation and the OTR

13. DISORDERS OF OCULAR MOTILITY DUE TO DISEASE OF THE BRAINSTEM, CEREBELLUM, AND DIENCEPHALON 836

OCULAR MOTOR SYNDROMES CAUSED BY LESIONS IN THE MEDULLA 837

Paramedian Medullary Lesions Impairing Gaze Holding • Manifestations of Disease Affecting the Vestibular Nuclei • Wallenberg's Syndrome (Dorsolateral Medullary Infarction) • Effects of Disease Involving the Inferior Olivary Nucleus: The Syndrome of Oculopalatal Tremor

OCULAR MOTOR SYNDROMES CAUSED BY DISEASE OF THE CEREBELLUM 844

Three Principal Cerebellar Syndromes • Effects of Cerebellar Hemisphere Lesions on Eye Movements • Other Disorders of Eye Movements Attributed to Cerebellar Disease • Developmental Anomalies of the Hindbrain and Cerebellum • Ocular Motor Findings in the Hereditary Ataxias (Appendix C) • Paraneoplastic Cerebellar Degeneration • Cerebellar Stroke • Cerebellar Mass Lesions

OCULAR MOTOR SYNDROMES CAUSED BY DISEASE OF THE PONS 859

Lesions of the Abducens Nucleus • Lesions of the Paramedian Pontine Reticular Formation (PPRF) • Lesions of the Medial Longitudinal Fasciculus: Internuclear Ophthalmoplegia (INO) • Combined Unilateral Conjugate Gaze Palsy and INO: “One-and-a-Half Syndrome” and Other Variants • Selective Cell Vulnerability in the Pons

OCULAR MOTOR SYNDROMES CAUSED BY LESIONS OF THE MIDBRAIN 877

Vertical Gaze Palsies • Lesions of the Rostral Interstitial Nucleus of the Medial Longitudinal Fasciculus (RIMLF) and Vertical Saccadic Palsy • Lesions of the Interstitial Nucleus of Cajal • Effects of Lesions of the Posterior Commissure and Nucleus of the Posterior Commissure • Clinical Manifestations of Lesions Affecting Several Midbrain Structures • Selective Cell Vulnerability in the Midbrain

OCULAR MOTOR SYNDROMES CAUSED BY LESIONS IN THE SUPERIOR COLLICULUS 887

OCULAR MOTOR SYNDROMES CAUSED BY LESIONS IN THE DIENCEPHALON 888

Effects of Thalamic Lesions on Eye Movements • Effects of Pulvinar Lesions on Eye Movements

14. DISORDERS OF OCULAR MOTILITY WITH DISEASE AFFECTING THE BASAL GANGLIA, CEREBRAL CORTEX, AND IN SYSTEMIC CONDITIONS 916

DISORDERS INVOLVING THE BASAL GANGLIA 917

Parkinsonism and Related Akinetic-Rigid Syndromes • Eye Movement Disorders in Hyperkinetic Movement Syndromes

OCULAR MOTOR SYNDROMES CAUSED BY LESIONS IN THE CEREBRAL HEMISPHERES 940

Disturbances of Gaze with Acute Hemispheric Lesions • Enduring Disturbances of Gaze Caused by Unilateral Hemispheric Lesions • Effects of Focal Hemispheric Lesions on Gaze

OCULAR MOTOR APRAXIA 951

Acquired Ocular Motor Apraxia • Saccadic Palsy Following Cardiac and Aortic Surgery • Congenital Ocular Motor Apraxia (Infantile-Onset Saccade Initiation Delay [ISID])

EYE MOVEMENTS DURING EPILEPTIC SEIZURES 961

ABNORMALITIES OF EYE MOVEMENTS IN PATIENTS WITH DEMENTIA 963

Alzheimer’s Disease • Creutzfeldt-Jakob Disease • HIV and Dementia • Eye Movements Following Traumatic Brain Injury (TBI) • Amyotrophic Lateral Sclerosis and Eye Movements

EYE MOVEMENT DISORDERS IN PSYCHIATRIC ILLNESSES 969

Disorders of Eye Movements in Schizophrenia • Eye Movements in Autism Spectrum Disorders (ASD) • Bipolar Affective Disorder • Eye Movements in Other Psychiatric Disorders

EYE MOVEMENTS IN STUPOR AND COMA 975

Resting Position of the Eyes in Unconscious Patients • Spontaneous Eye Movements in Unconscious Patients • Reflex Eye Movements in Unconscious Patients

OCULAR MOTOR DYSFUNCTION IN MULTIPLE SCLEROSIS (MS) 980

Value of Examining Eye Movements in MS Patients • Clinical Evaluation of Eye Movements in MS • Measuring Eye Movements in MS • The Role of Eye Movements in the Management of MS

OCULAR MOTOR MANIFESTATIONS OF METABOLIC AND DEFICIENCY DISORDERS 984

Eye Movement Disorders in Infants Who Eventually Develop Normally • Lipid Storage Diseases • Wernicke's Encephalopathy • Leigh's Syndrome • Genetic Disorders of Central Myelin • Hereditary Disorders Causing Vitamin E Deficiency • Wilson's Disease

EFFECTS OF DRUGS ON EYE MOVEMENTS 990**Appendix A A Summary Scheme for the Bedside Ocular Motor Examination 1025****Appendix B A Summary of Methods for Measuring Eye Movements 1029****Appendix C Tables of Ocular Motor Findings in Hereditary Ataxias 1035****Appendix D Table of Videos and Their Legends 1049****Index 1075**

Online edition: www.oxfordmedicine.com/neurologyofeyemovements5e
