

Contents

1	Introduction	1
	Valerio Capraro and Martino Lupini	
1.1	von Neumann Algebras and II_1 Factors	1
1.2	Voiculescu's Free Entropy	5
1.3	History of Connes' Embedding Conjecture	6
1.4	Hyperlinear and Sofic Groups	7
1.5	Kaplansky's Direct Finiteness Conjecture	8
1.6	Kaplansky's Group Ring Conjectures	11
2	Sofic and Hyperlinear Groups	13
	Martino Lupini	
2.1	Definition of Sofic Groups	13
2.2	Definition of Hyperlinear Groups	18
2.3	Classes of Sofic and Hyperlinear Groups	23
2.4	Closure Properties of the Classes of Sofic and Hyperlinear Groups.....	24
2.5	Further Examples of Sofic Group	27
2.6	Logic for Invariant Length Groups	33
2.7	Model Theoretic Characterization of Sofic and Hyperlinear Groups.....	39
2.8	The Kervaire-Laudenbach Conjecture	41
2.9	Other Metric Approximations and Higman's Group	43
2.10	Rank Rings and Kaplansky's Direct Finiteness Conjecture	48
2.11	Logic for Tracial von Neumann Algebras.....	52
2.12	The Algebraic Eigenvalues-Conjecture	57
2.13	Entropy	60
	2.13.1 Entropy of a Single Transformation	60
	2.13.2 Entropy of an Integer Bernoulli Shift.....	61
	2.13.3 Tilings on Amenable Groups	62
	2.13.4 Entropy of Actions of Amenable Groups	64
	2.13.5 Entropy of Bernoulli Shifts of an Amenable Group	64

2.13.6	Entropy of Actions of Sofic Groups	66
2.13.7	Bernoulli Actions of Sofic Groups.....	67
3	Connes' Embedding Conjecture	73
	Valerio Capraro	
3.1	The Hyperfinite II_1 Factor	73
3.2	Hyperlinear Groups and Rădulescu's Theorem.....	75
3.3	Kirchberg's Theorem.....	78
3.3.1	Effros-Marechal Topology on the Space of von Neumann Algebras	78
3.3.2	Proof of Kirchberg's Theorem	81
3.4	Connes' Embedding Conjecture and Lance's WEP	85
3.5	Algebraic Reformulation of the Conjecture.....	95
3.6	Brown's Invariant	100
3.6.1	Convex Combinations of Representations into \mathcal{R}^U	100
3.6.2	Extreme Points of $\text{Hom}(M, \mathcal{R}^U)$ and a Problem of Popa	103
	Conclusions	109
A	Tensor Product of C^*-Algebras	113
B	Ultrafilters and Ultralimits	117
	Vladimir G. Pestov	
	Bibliography	141
	Index	149
