Contents

1 Introduction **1**

2 Projective Modules Over Polynomial Rings **9**

2.1 Quillen's Proof of Serre's Problem 9

2.1.1 Finitely-Generated Projective Modules 9

2.1.2 Finitely-Generated Stably Free Modules 16

2.1.3 Concrete Local-Global Principle 21

2.1.4 The Patchings of Quillen and Vaserstein 27

2.1.5 Horrocks' Theorem 28

2.1.6 Quillen Induction Theorem 29

2.2 Suslin's Proof of Serre's Problem 31

2.2.1 Making the Use of Maximal Ideals Constructive 31

2.2.2 A Reminder About the Resultant 31

2.2.3 A Lemma of Suslin 34

2.2.4 A More General Strategy (By "Backtracking") 36

2.2.5 Suslin's Lemma for Rings Containing an Infinite Field 38

2.2.6 Suslin's Algorithm 41

2.2.7 Suslin's Solution to Serre's Problem 47

2.2.8 A Simple Result About Coherent Rings 48

2.3 Constructive Definitions of Krull Dimension 50

2.3.1 Ideals and Filters 50

2.3.2 Zariski Lattice 51

2.3.3 Krull Boundary 51

2.3.4 Pseudo-Regular Sequences and Krull Dimension 53

2.3.5 Krull Dimension of a Polynomial Ring Over a Discrete Field 55

2.3.6 Application to the Stable Range Theorem 56

2.3.7 Serre's Splitting Theorem and Forster-Swan Theorem 57

2.3.8 Support on a Ring and n-Stability 58

2.4 Projective Modules Over $\mathbf{R}[X_1,\ldots,X_n]$, $\mathbf{R}$ an Arithmetical Ring 66
2.4.1 A Constructive Proof of Brewer-Costa-Maroscia Theorem 66
2.4.2 The Theorem of Lequain, Simis and Vasconcelos 71
2.5 Suslin's Stability Theorem 76
2.5.1 "Obvious" Syzygies 76
2.5.2 $\mathrm{E}_2(\mathbf{R})$ as a Subgroup of $\mathrm{SL}_2(\mathbf{R})$ 77
2.5.3 Suslin's Normality Theorem 83
2.5.4 Unimodular Rows and Elementary Operations 86
2.5.5 Local-Global Principle for Elementary Polynomial Matrices 88
2.5.6 A Realization Algorithm for $\mathrm{SL}_3(\mathbf{R}[X])$ 92
2.5.7 Elementary Unimodular Completion 93
2.6 The Hermite Ring Conjecture 95
2.6.1 The Hermite Ring Conjecture in Dimension One 95
2.6.2 Stably Free Modules Over $\mathbf{R}[X]$ of Rank $>$ dim $\mathbf{R}$ are Free 99
2.6.3 Two New Conjectures 101

3 Dynamical Gröbner Bases **105**
3.1 Dickson's Lemma and the Division Algorithm 105
3.2 Gröbner Rings 112
3.3 Gröbner Bases Over Strongly Discrete Coherent Arithmetical Rings 117
3.3.1 Gröbner Bases Over a Coherent Valuation Ring 117
3.3.2 Gröbner Bases Over $\mathbb{Z}/p^\alpha\mathbb{Z}$ 126
3.3.3 When a Valuation Domain Is Gröbner? 128
3.3.4 When a Coherent Valuation Ring with Zero-Divisors is Gröbner? 133
3.3.5 Dynamical Gröbner Bases Over Gröbner Arithmetical Rings 138
3.3.6 A Parallelisable Algorithm for Computing Dynamical Gröbner Bases Over $\mathbb{Z}/m\mathbb{Z}$ via the Chinese Remainder Theorem 142
3.3.7 A Parallelisable Algorithm for Computing Gröbner Bases Over $(\mathbb{Z}/p^\alpha\mathbb{Z})\times(\mathbb{Z}/p^\alpha\mathbb{Z})$ 144
3.3.8 Dynamical Gröbner Bases Over $\mathbb{F}_2[a,b]/\langle a^2-a, b^2-b\rangle$ 147
3.3.9 Dynamical Gröbner Bases Over the Integers 149
3.3.10 Gröbner Bases Over the Integers via Prime Factorization 151
3.3.11 A Branching-Free Algorithm for Computing Gröbner Bases Over the Integers 153

3.4 Computing Syzygy Modules with Polynomial Rings Over Gröbner Arithmetical Rings 156
3.4.1 Computing Syzygy Modules with Polynomial Rings Over Gröbner Valuation Rings 156
3.4.2 Computing Dynamically a Generating Set for Syzygies of Polynomials Over Gröbner Arithmetical Rings 166

4 Syzygies in Polynomial Rings Over Valuation Domains 173
4.1 Preliminary Tools 174
4.2 Saturation of Finitely-Generated Sub-**V**-Modules of $\mathbf{V}[X_1,\ldots,X_k]^m$ 177
4.3 Saturation of a Finitely-Generated $\mathbf{V}[X]$-Module, with **V** a Valuation Domain 186
4.4 Computing Syzygies Over $\mathbf{R}[X]$, with **R** a Prüfer Domain 194
4.4.1 The Case of a Valuation Domain 194
4.4.2 The Case of a Prüfer Domain 196
4.5 The Multivariate Case 196
4.5.1 Hilbert Series 196
4.5.2 The Saturation Defect Series 199
4.5.3 A Saturation Algorithm in the Multivariate Case 202

5 Exercises 207

6 Detailed Solutions to the Exercises 221
