List of contributors [xiii]

Preface [xvii]

1. Lost fishes, who is counting? The extent of the threat to freshwater fish biodiversity [1]
William R. T. Darwall and Jörg Freyhof
 - 1.1 Introduction [1]
 - 1.2 Global distribution of freshwater fishes [3]
 - 1.3 State of knowledge on the extent and distribution of threats [4]
 - 1.4 Summary and conclusions [28]
 - 1.5 Discussion questions [31]
 - 1.6 References [32]
2. Why are freshwater fish so threatened? [37]
Gerard P. Closs, Paul L. Angermeier, William R. T. Darwall and Stephen R. Balcombe
 - 2.1 Introduction [37]
 - 2.2 Drivers and patterns of freshwater fish diversity [38]
 - 2.3 Life history, species traits and the risk of extinction [45]
 - 2.4 Movement and dispersal of fish in dendritic drainage networks [47]
 - 2.5 Competing for fresh water: understanding, managing and mitigating human impacts on aquatic fauna [52]
 - 2.6 Societal attitudes and economic development [63]
 - 2.7 Conclusions [67]
 - 2.8 Discussion questions [69]
 - 2.9 Acknowledgements [69]
 - 2.10 References [69]
3. Climate change effects on freshwater fishes, conservation and management [76]
Jani Heino, Jaakko Erkinaro, Ari Huusko and Miska Luoto
 - 3.1 Introduction [76]
 - 3.2 Responses of freshwater fish to geographic, environmental and climatic gradients [78]

- 3.3 Climate change effects on freshwater fishes [81]
- 3.4 Implications of climate change for conservation and management [92]
- 3.5 Conclusion [100]
- 3.6 Discussion questions [100]
- 3.7 Acknowledgements [101]
- 3.8 References [101]

- 4. Challenges and opportunities for fish conservation in dam-impacted waters [107]
Julian D. Olden
 - 4.1 Dammed if you do, damned if you don't [107]
 - 4.2 Dammed world [108]
 - 4.3 Environmental and ecological impacts of dams [112]
 - 4.4 Opportunities for fish conservation [122]
 - 4.5 Conclusion [141]
 - 4.6 Discussion questions [142]
 - 4.7 Acknowledgements [142]
 - 4.8 References [142]

- 5. Chemical pollution [149]
Nathaniel L. Scholz and Jenifer K. McIntyre
 - 5.1 Introduction [149]
 - 5.2 A legacy of toxics in freshwater habitats [152]
 - 5.3 Expanding from point sources to non-point sources of pollution [157]
 - 5.4 Agricultural run-off [158]
 - 5.5 Urban run-off [161]
 - 5.6 Contaminants of emerging concern [162]
 - 5.7 Resource extraction and transport [165]
 - 5.8 Pollution solutions, beyond dilution [168]
 - 5.9 Chemical pollution and freshwater fish conservation: a look forward [169]
 - 5.10 Discussion questions [173]
 - 5.11 References [174]

- 6. Multiple stressor effects on freshwater fish: a review and meta-analysis [178]
Christoph D. Matthaei and Katharina Lange
 - 6.1 Introduction [178]
 - 6.2 Multiple-stressors research on freshwater fish [179]
 - 6.3 Multiple-stressor experiments on freshwater fish – reviewing methods [186]
 - 6.4 Qualitative literature review: main findings and discussion [188]

- 6.5 Quantitative review: meta-analytic findings and discussion [200]
- 6.6 Future research needs [205]
- 6.7 Discussion questions [209]
- 6.8 References [209]

- 7. Infectious disease and the conservation of freshwater fish [215]
Martin Krkosek and Robert Poulin
 - 7.1 Introduction [215]
 - 7.2 Frequency-dependent transmission [218]
 - 7.3 Multi-host dynamics [219]
 - 7.4 Pollution and disease [223]
 - 7.5 Warming and disease [223]
 - 7.6 Population reduction [224]
 - 7.7 Genetic diversity and disease [226]
 - 7.8 Predator–prey dynamics [227]
 - 7.9 Geographic and taxonomic biases and trends [228]
 - 7.10 Conclusion [229]
 - 7.11 Discussion questions [231]
 - 7.12 References [232]

- 8. Non-indigenous fishes and their role in freshwater fish imperilment [238]
M. Jake Vander Zanden, Nicolas W. R. Lapointe and Michael P. Marchetti
 - 8.1 Introduction [238]
 - 8.2 Transport and introduction of non-indigenous freshwater fishes [241]
 - 8.3 Ecological impacts and responses [248]
 - 8.4 NIFs and interactions with other drivers [255]
 - 8.5 Management strategies [257]
 - 8.6 Summary [261]
 - 8.7 Discussion questions [261]
 - 8.8 Acknowledgements [262]
 - 8.9 References [262]

- 9. Riparian management and the conservation of stream ecosystems and fishes [270]
Mark S. Wipfli and John S. Richardson
 - 9.1 Ecological importance of riparian habitats to freshwater ecosystems [270]
 - 9.2 Riparian habitat alterations and impacts [277]
 - 9.3 Future prospects [281]
 - 9.4 Key knowledge gaps and future research directions [282]
 - 9.5 Discussion questions [284]
 - 9.6 References [284]

10. Fragmentation, connectivity and fish species persistence in freshwater ecosystems [292]
Keith B. Gido, James E. Whitney, Joshua S. Perkin and Thomas F. Turner
 - 10.1 Overview [292]
 - 10.2 Fragmentation of large rivers, streams and lakes [293]
 - 10.3 Conceptual framework for understanding fragmentation effects on fishes [296]
 - 10.4 Quantifying connectivity [301]
 - 10.5 Modelling responses to fragmentation [310]
 - 10.6 Conservation challenges and opportunities [311]
 - 10.7 Future direction and challenges [313]
 - 10.8 Discussion questions [316]
 - 10.9 Acknowledgements [316]
 - 10.10 References [316]

11. Conservation of migratory fishes in freshwater ecosystems [324]
Peter B. McIntyre, Catherine Reidy Liermann, Evan Childress, Ellen J. Hamann, J. Derek Hogan, Stephanie R. Januchowski-Hartley, Aaron A. Koning, Thomas M. Neeson, Daniel L. Oele and Brenda M. Pracheil
 - 11.1 Ecological classes of migratory freshwater fishes [326]
 - 11.2 Triple jeopardy: dependence on multiple habitats and their interconnections [330]
 - 11.3 Ecological and societal implications of declining freshwater fish migrations [334]
 - 11.4 Societal dimensions of conservation [340]
 - 11.5 Future research directions [349]
 - 11.6 Discussion questions [353]
 - 11.7 Acknowledgements [353]
 - 11.8 References [353]

12. Protecting apex predators [361]
Kirk O. Winemiller, Paul Humphries and Bradley J. Pusey
 - 12.1 Introduction [361]
 - 12.2 A brief global survey of fishes that are apex predators in freshwater ecosystems [363]
 - 12.3 Threats and challenges to large predatory fishes and freshwater biodiversity [374]
 - 12.4 Influence of large predatory fishes on freshwater communities and ecosystems [387]
 - 12.5 Potential barriers and solutions to the conservation of freshwater fish diversity and abundance [389]
 - 12.6 Future outlook for the conservation of large apex predatory fishes [391]
 - 12.7 Discussion questions [393]
 - 12.8 References [394]

13. Artificial propagation of freshwater fishes: benefits and risks to recipient ecosystems from stocking, translocation and re-introduction [399]
John M. Epifanio and Robin S. Waples
 - 13.1 Introduction [399]
 - 13.2 Brief history of propagation and stocking [403]
 - 13.3 Potential benefits of artificial propagation [408]
 - 13.4 Risks associated with artificial propagation [418]
 - 13.5 Risks associated with introductions, stock transfers, re-introductions and translocations [422]
 - 13.6 A proposed analytical framework for addressing benefit and risk conflicts [422]
 - 13.7 'Best practices' and artificial propagation reform [426]
 - 13.8 Our call to include formally analysing a fuller range of risks and benefits [430]
 - 13.9 Conclusion [433]
 - 13.10 Discussion questions [434]
 - 13.11 Acknowledgements [434]
 - 13.12 References [434]

14. Freshwater conservation planning [437]
Virgilio Hermoso, Simon Linke, Stephanie R. Januchowski-Hartley and Mark J. Kennard
 - 14.1 Introduction [437]
 - 14.2 Past approaches to identifying freshwater conservation priorities [440]
 - 14.3 Systematic conservation planning methods/tools [444]
 - 14.4 Addressing freshwater ecosystem processes and threats to improve adequacy of systematic conservation planning in a changing world [449]
 - 14.5 Current challenges to effective planning and implementation of conservation in freshwater ecosystems [455]
 - 14.6 Discussion questions [460]
 - 14.7 References [461]

15. Sustainable inland fisheries – perspectives from the recreational, commercial and subsistence sectors from around the globe [467]
Steven J. Cooke, Vivian M. Nguyen, John M. Dettmers, Robert Arlinghaus, Michael C. Quist, Denis Tweddle, Olaf L. F. Weyl, Rajeev Raghavan, Marcela Portocarrero-Aya, Edwin Agudelo Cordoba and Ian G. Cowx
 - 15.1 Introduction [467]
 - 15.2 Characteristics of inland fisheries [470]
 - 15.3 Case studies [474]
 - 15.4 Synthesis [494]
 - 15.5 Achieving a sustainable future for inland fisheries [497]
 - 15.6 Discussion questions [499]
 - 15.7 Acknowledgements [500]
 - 15.8 References [500]

16. Understanding and conserving genetic diversity in a world dominated by alien introductions and native transfers: the case study of primary and peripheral freshwater fishes in southern Europe [506]
Valerio Ketmaier and Pier Giorgio Bianco
 - 16.1 Introduction [506]
 - 16.2 Biodiversity at risk [508]
 - 16.3 How can genetics help? [510]
 - 16.4 Study cases [512]
 - 16.5 Conclusions and future directions [527]
 - 16.6 Discussion questions [528]
 - 16.7 References [529]

17. Maintaining taxonomic skills; the decline of taxonomy – a threat to fish conservation [535]
Maria J. Collares-Pereira, Paul H. Skelton and Ian G. Cowx
 - 17.1 Introduction [535]
 - 17.2 Paradigm shifts in conservation [537]
 - 17.3 Erosion of taxonomy capacity [541]
 - 17.4 Evolution of new tools [546]
 - 17.5 Integrating modern taxonomy into conservation [550]
 - 17.6 Maintaining taxonomic skills for conservation [555]
 - 17.7 Discussion questions [557]
 - 17.8 Acknowledgements [557]
 - 17.9 References [557]

18. Synthesis – what is the future of freshwater fishes? [563]
Gerard P. Closs, Martin Krkosek and Julian D. Olden
 - 18.1 Why should we conserve freshwater fish diversity? [563]
 - 18.2 Can humans coexist with diverse freshwater fish communities? [565]
 - 18.3 Major challenges for scientists and managers [566]
 - 18.4 Opportunities for effective conservation [568]
 - 18.5 Confronting an immense and imminent threat [570]
 - 18.6 References [572]
