

# Contents

## **Foreword: I Ran with a Zombie**

Andrew Cartmel . . . . . xiii

## **Introduction: What can zombies teach us about mathematics?**

Robert Smith? . . . . . xvii

## **The Viral Spread of a Zombie Media Story**

Robert Smith? . . . . . 1

1.1 Introduction . . . . . 1

1.1.1 A Media Invasion of Zombies . . . . . 1

1.1.2 The Effects of Media . . . . . 3

1.2 The Model . . . . . 5

1.2.1 The Durability of a Media Story . . . . . 6

1.2.2 The Newsworthiness of a Media Story . . . . . 8

1.2.3 The Natural Lifespan of a Media Story . . . . . 9

1.3 Analysis . . . . . 9

1.3.1 Final Size Populations . . . . . 9

1.3.2 Stability . . . . . 10

1.3.3 A Competing Story . . . . . 11

1.4 The Power of a Right Hook . . . . . 12

1.5 Sample Scenarios . . . . . 12

1.6 Discussion . . . . . 16

A Acknowledgements . . . . . 20

B Glossary . . . . . 20

## **The Undead: A Plague on Humanity or a Powerful New Tool for Epidemiological Research?**

Jane M. Heffernan and Derek J. Wilson . . . . . 27

2.1 Introduction . . . . . 28

2.2 Creeping up on Us: The Origins of Zombies and the Bubonic Plague . . . . . 28

2.3 The Rising Tide: Modelling Epidemics . . . . . 30

2.4 Living with Vampires: Modelling Endemics . . . . . 36

2.5 Conclusions . . . . . 40

A Glossary . . . . . 41

|  |    |
|--|----|
| <b>When Zombies Attack! Alternate Ending</b>                                   |    |
| Phil Munz . . . . .  | 45 |
| 3.1 Title Sequence . . . . .   | 45 |
| 3.2 The Story So Far . . . . .   | 46 |
| 3.3 A Behind-the-Scenes Look at the Making of the Alternate Ending . . . . .   | 48 |
| 3.4 The End? . . . . .   | 51 |
| 3.5 DVD Extras . . . . .   | 53 |
| A Oscar Speech . . . . .   | 54 |
| B IMDB . . . . .   | 54 |
| <b>When Humans Strike Back! Adaptive Strategies for Zombie Attacks</b>         |    |
| Bard Ermentrout and Kyle Ermentrout . . . . .                                  | 57 |
| 4.1 Introduction . . . . .   | 57 |
| 4.2 Multiple Zombies . . . . .   | 58 |
| 4.3 Adaptive Strategies for Humans . . . . .                                   | 62 |
| 4.4 Discussion . . . . .   | 67 |

| B Glossary . . . . .   | 91 |

**How Long Can We Survive?**

Thomas E. Woolley, Ruth E. Baker, Eamonn A. Gaffney and Philip K. Maini 93

- 6.1 Introduction . . . . . 93
- 6.2 Random Walks and Diffusion . . . . . 94
- 6.3 A Mathematical Description of Diffusion . . . . . 95
- 6.4 Solution to the Diffusion Equation . . . . . 97
- 6.5 Time of First Interaction . . . . . 99
  - 6.5.1 Diffusive Time Scale . . . . . 99
- 6.6 Slowing the Infection . . . . . 101
  - 6.6.1 Interaction Kinetics . . . . . 101
  - 6.6.2 Is It Possible to Survive? . . . . . 102
  - 6.6.3 Infection Wave . . . . . 104
- 6.7 Conclusion . . . . . 105
  - A Diffusion Solution Details . . . . . 107
  - B Approximating First Interaction Time . . . . . 110
  - C Changing Coordinates . . . . . 111
  - D Acknowledgements . . . . . 113
  - E Glossary . . . . . 113

**Demographics of Zombies in the United States**

Daniel Zelterman . . . . . 117

- 7.1 Introduction . . . . . 117
- 7.2 Data Sources . . . . . 118
- 7.3 Demographic Variables Examined . . . . . 119
- 7.4 Univariate Results . . . . . 122
- 7.5 Multivariate Analyses . . . . . 125
- 7.6 Conclusion . . . . . 126
  - A Glossary . . . . . 127

**Is It Safe to Go Out Yet? Statistical Inference in a Zombie Outbreak Model**

Ben Calderhead, Mark Girolami and Desmond J. Higham . . . . . 129

- 8.1 Mathematical Modelling with Ordinary Differential Equations . . . . . 129
- 8.2 Simple Model . . . . . 131
- 8.3 More Realistic Model . . . . . 138
- 8.4 Model Selection . . . . . 141
- 8.5 Is It Safe to Go Out Yet? . . . . . 144
- 8.6 Discussion . . . . . 145
  - A Glossary . . . . . 147

**The Social Zombie: Modelling Undead Outbreaks on Social Networks**

Laurent Hébert-Dufresne, Vincent Marceau, Pierre-André Noël,  
 Antoine Allard and Louis J. Dubé . . . . . 149

9.1 Introduction . . . . . 150

9.2 Modelling a Zombie Invasion: A Practical Guide . . . . . 150

9.2.1 Contact Networks 101 . . . . . 151

9.2.2 Building a Contact Network . . . . . 151

9.2.3 The Rules of the Game . . . . . 152

9.2.4 Monte Carlo Simulations . . . . . 153

9.3 Mathematical Zombies: A Theory of the Undead . . . . . 154

9.3.1 The Variables of the System . . . . . 154

9.3.2 Moment-Closure Approximation . . . . . 155

9.3.3 Writing the Dynamical System . . . . . 157

9.4 Results: Does Humanity Have the Slightest Chance? . . . . . 158

9.4.1 Choosing the Victims . . . . . 158

9.4.2 Body Count . . . . . 159

9.5 The Social Zombie: Adapting for Realism . . . . . 162

9.5.1 The New Rules of the Game . . . . . 162

9.5.2 Hope Is the Last Thing to Die, Isn't It? . . . . . 164

9.6 A Conclusion on Networks . . . . . 165

9.7 . . . and Zombies . . . . . 166

A Numerical Integration . . . . . 167

B Glossary . . . . . 169

**Zombie Infection Warning System Based on Fuzzy Decision-Making**

Micael S. Couceiro, Carlos M. Figueiredo, J. Miguel A. Luz and Michael J.  
 Delorme . . . . . 171

10.1 Introduction . . . . . 171

10.2 Zombie Mathematical Models . . . . . 173

10.2.1 The Base Model . . . . . 173

10.2.2 Incorporating Latent Infection . . . . . 173

10.2.3 Zombie Outbreak with Quarantine of Zombies and Infected  
 Individuals . . . . . 174

10.2.4 Medical Treatment for Zombies . . . . . 174

10.3 Introduction to Fuzzy Systems . . . . . 175

10.3.1 Zombie Infection Warning System . . . . . 179

10.3.2 Decision-Making System Using Fuzzy Logic . . . . . 181

10.4 Experimental Results . . . . . 182

10.5 Conclusions . . . . . 185

A Acknowledgements . . . . . 187

B Glossary . . . . . 187

**Is There a Zombicidal Maniac Near You? You'd Better Hope So!**  
 Nick Beeton, Alex Hoare and Brody Walker . . . . . 191

- 11.1 Introduction . . . . . 191
- 11.2 Data Collection . . . . . 193
- 11.3 Agent-Based Model . . . . . 193
- 11.4 Stochastic Model . . . . . 195
- 11.5 Transmission Dynamics . . . . . 196
- 11.6 Zombie Management . . . . . 199
- 11.7 Observations on Behaviour . . . . . 202
- 11.8 Discussion . . . . . 202
  - A Acknowledgements . . . . . 204
  - B Glossary . . . . . 205

**Zombies in the City: A NetLogo Model**  
 Jennifer Badham and Judy-anne Osborn . . . . . 209

- 12.1 Introduction . . . . . 209
- 12.2 Methodology . . . . . 211
  - 12.2.1 Why Use ABMs and NetLogo? . . . . . 211
  - 12.2.2 Our NetLogo Model . . . . . 212
  - 12.2.3 Experimental Design . . . . . 214
- 12.3 Generic Behaviours Exhibited by the Model . . . . . 216
  - 12.3.1 Zombies Win . . . . . 216
  - 12.3.2 Humans Win . . . . . 217
  - 12.3.3 Stalemate . . . . . 217
- 12.4 Effects of Speed and Skill . . . . . 218
  - 12.4.1 Humans Slow and Unskilled . . . . . 218
  - 12.4.2 Humans Fast and Unskilled . . . . . 221
  - 12.4.3 Humans Skilled and Slow . . . . . 221
  - 12.4.4 Humans Faster Than Zombies and Skilled . . . . . 224
- 12.5 Implications for Education and Research Training . . . . . 229
- 12.6 Conclusion . . . . . 230
  - A Acknowledgements . . . . . 230
  - B Glossary . . . . . 231

**An Evolvable Linear Representation for Simulating Government Policy in Zombie Outbreaks**  
 Daniel Ashlock, Joseph Alexander Brown and Clinton Innes . . . . . 233

- 13.1 Introduction . . . . . 233
- 13.2 The Discrete-Time Model . . . . . 235
- 13.3 Representation of Government Policies . . . . . 237
  - 13.3.1 Overview of Policies . . . . . 237
  - 13.3.2 Public Response to Government Policies . . . . . 238
- 13.4 The Evolutionary Algorithm . . . . . 239
