Contents

Chapter 1. Introduction 1
1.1. Informal description of the limit model 4
1.2. Example I: Mutation counting 9
1.3. Example II: Polynomial selective costs 10
1.4. Example III: Demographic selective costs 11
1.5. Comments on the literature 12
1.6. Overview of the remainder of the work 14

Chapter 2. Definition, Existence, and Uniqueness of the Dynamical System 15
2.1. Spaces of measures 15
2.2. Definition of the dynamical system 17
2.3. Existence and uniqueness of solutions 18
2.4. Lemmas used in the proof of existence and uniqueness 19
2.5. Density form of the dynamical system 21
2.6. Mutation measures with infinite total mass 25

Chapter 3. Equilibria 27
3.1. Introductory example: One-dimensional systems 28
3.2. Introductory example: Multiplicative selective costs 29
3.3. Fréchet derivatives 33
3.4. Existence of equilibria via perturbation 34
3.5. Concave selective costs 36
3.6. Concave selective costs: Existence and stability of equilibria 42
3.7. Iterative computation of the minimal equilibrium 45
3.8. Stable equilibria in the concave setting via perturbation 45
3.9. Equilibria for demographic selective costs 47

Chapter 4. Mutation, Selection, and Recombination in Discrete Time 51
4.1. Mutation and selection in discrete time 51
4.2. Recombination in discrete time 53
4.3. Recombination trees and annealed recombination 55
4.4. Vintages 59

Chapter 5. Shattering and the Formulation of the Convergence Result 63
5.1. Shattering of random measures 63
5.2. Consequences of shattering 66
5.3. Convergence to Poisson of iterated recombination 68
5.4. Atoms in the initial intensity 71
5.5. Preview of the main convergence result 72

Chapter 6. Convergence with Complete Poissonization 75

Chapter 7. Supporting Lemmas for the Main Convergence Result 81
7.1. Estimates for Radon-Nikodym derivatives 81
7.2. Comparisons with complete Poissonization 91

Chapter 8. Convergence of the Discrete Generation System 103
8.1. Outline of the proof 103
8.2. The convergence theorem 104

Appendix A. Results Cited in the Text 111
A.1. Gronwall's Inequality 111
A.2. Two expectation approximations 111
A.3. Identities for Poisson random measures 112
A.4. Bounds for Poisson random measures 114
A.5. Bounds for Radon-Nikodym derivatives 117
