

Contents

1	Introduction	1
	1.1 Linear Equations	16
	1.2 Notes	45
	1.3 Exercises	46
2	Scalar Conservation Laws	53
	2.1 Entropy Conditions	53
	2.2 The Riemann Problem	60
	2.3 Front Tracking	66
	2.4 Existence and Uniqueness	74
	2.5 Notes	88
	2.6 Exercises	89
3	A Short Course in Difference Methods	95
	3.1 Conservative Methods	95
	3.2 Higher-Order Schemes	115
	3.3 Error Estimates	127
	3.4 A Priori Error Estimates	139
	3.5 Measure-Valued Solutions	147
	3.6 Notes	165
	3.7 Exercises	165
4	Multidimensional Scalar Conservation Laws	171
	4.1 Dimensional Splitting Methods	171
	4.2 Dimensional Splitting and Front Tracking	180
	4.3 Convergence Rates	189
	4.4 Operator Splitting: Diffusion	205
	4.5 Operator Splitting: Source	212
	4.6 Notes	217
	4.7 Exercises	217
5	The Riemann Problem for Systems	223
	5.1 Hyperbolicity and Some Examples	223
	5.2 Rarefaction Waves	229

5.3	The Hugoniot Locus: The Shock Curves	235
5.4	The Entropy Condition	241
5.5	The Solution of the Riemann Problem	249
5.6	The Riemann Problem for the Euler Equations	260
5.7	Notes	277
5.8	Exercises	277
6	Existence of Solutions of the Cauchy Problem	283
6.1	Front Tracking for Systems	283
6.2	Convergence	297
6.3	Notes	310
6.4	Exercises	311
7	Well-Posedness of the Cauchy Problem	313
7.1	Stability	318
7.2	Uniqueness	344
7.3	Notes	366
7.4	Exercises	366
8	Conservation Laws with Discontinuous Flux Functions	367
8.1	The Riemann Problem	369
8.2	The Cauchy Problem	391
8.3	Uniqueness of Entropy Solutions	412
8.4	Notes	425
8.5	Exercises	426
A	Total Variation, Compactness, Etc.	427
A.1	Notes	438
A.2	Exercises	439
B	The Method of Vanishing Viscosity	441
B.1	Notes	455
B.2	Exercises	456
C	Answers and Hints	457
	Bibliography	503
	Index	513
