Part	I GIS	5, Geocomputation, and GIS Data	1
1	Introd	uction	3
1.1 1.2 1.3	What is Geocom GIS-ena	geocomputation? aputation and water resources science and engineering abled geocomputation in water resources science and	3 4
1.4 1.5 1.6	enginee Why she Motivat Concluc Referen	ering ould water resources engineers and scientists study GIS cion and organization of this book ding remarks lees	5 5 7 9
2	A Brie	f History of GIS and Its Use in Water	
	Resou	rces Engineering	11
2.1 2.2	Introdu Geograj hardwa	iction phic Information Systems (GIS) – software and re	11 11
2.3	Remote	e sensing and global positioning systems and	**
2 /	develop	oment of GIS	12 13
2.5	Recent	trends in GIS	19
2.6	Benefit	s of using GIS in water resources engineering	
27	and sci Challen	ence ges and limitations of GIS-based approach to water	20
2.7	resourc	es engineering	20
	2.7.1	Limitation 1: incompatibilities between real-world and GIS modeled systems	20
	2.7.2	Limitation 2: inability of GIS to effectively handle	01
	2.7.3	time dimension Limitation 3: subjectivity arising from the availability of multiple geoprocessing tools	21
	2.7.4	Limitation 4: ground-truthing and caution against extrapolation	21
	2.7.5	Limitation 5: crisp representation of fuzzy geographic	
	2.7.6	boundaries Limitation 6: dynamic rescaling of maps and intrinsic	21
	2.7.7	Limitation 7: inadequate or improper understanding	22
	2.7.8	Limitation 8: limited support for handling of advanced mathematical algorithms	22
2.8	Concluc Referen	ling remarks ices	23 25
3	Hydrol	ogic Systems and Spatial Datasets	27
3.1	Introdu	ction	27
3.2	Hydrolo	gical processes in a watershed	27
3.3	manage 3.3.1	ment and modeling studies Digital elevation models (DEMs)	28 28

3.4	Sources of data for developing digital elevation models 3.4.1 Accuracy issues surrounding digital elevation models	30 30
3.5	Sensitivity of hydrologic models to DEM resolution 3.5.1 Land use and land cover (LULC)	31 32
	cover maps	32
3.6	Accuracy issues surrounding land use land cover maps 3.6.1 Anderson classification and the standardization of	32
	LULC mapping	33
3.7	Sensitivity of hydrologic models to LULC resolution	34
	3.7.1 LULC, impervious surface, and water quality	34
20	5.7.2 Soli Udlasels Sourcos of data for developing soil mans	20
3.0	Accuracy issues surrounding soil mapping	37
3.10	Sensitivity of hydrologic models to soils resolution	38
3.11	Concluding remarks	43
	References	44
4	Water-Related Geospatial Datasets	47
4.1	Introduction	47
4.2	River basin, watershed, and subwatershed delineations	47
4.3	Streamflow and river stage data	48
4.4	Groundwater level data	48
4.5	Climate datasets	48
4.6	Vegetation indices	49
4./	4.7.1 Importance of soil moisture in water resources	49
	applications	49
	4.7.2 Methods for obtaining soil moisture data	50
	4.7.3 Remote sensing methods for soil moisture	50
	ASSESSMENTS	50
48	Water quality datasets	51
4.9	Monitoring strategies and needs	51
4.10	Sampling techniques and recent advancements in sensing	
	technologies	52
4.11	Concluding remarks	53
	References	53
5	Data Sources and Models	55
5.1	Digital data warehouses and repositories	55
5.2	Software for GIS and geocomputations	55
5.3	Software and data models for water resources applications	59
5.4	Concluding remarks	60
