Preface	ix
---------	----

Part 1 Inquiry into Statics

1	From the Classics to Keynes	3
1.1	Legacy of the Classics	4
1.2	Solving the Classical System	11
1.3	The Keynesian Perspective	12
1.4	From the Ruins	20
2	Anatomy of a Static Keynesian Macro System	24
2.1	The Model Structure	24
2.2	Amplifying the Equilibrium Relationships	27
2.3	Diagramming the Interrelationships	35
2.4	Emergence of the Bond Market	38
2.5	Autonomous Displacements and Policy Implications	41
2.6	Interdependent Shifts and Kinked Curves	45

Part 2 Elementary Dynamics

3	Toward Dynamics: Theory and Practice	51
3.1	Temporal Movements in a Static System	52
3.2	Model Metamorphosis: From Statics to Dynamics	54
3.3	Effects of Alternative Lag Structures	60

3.4	Taxonomy and Terminology of Temporal Responses	65
3.5	Dynamic Multipliers and Econometric Models	70
3.6	Dating Business Cycles in Practice	75
3.7	Constructing Composite and Diffusion Indices: An Example	79
3.8	An Indicator Approach to Anticipating Business Cycle Turns	83
3.9	The Scope of Harmonic Motion within Business Cycles	87
4	Popular Models of Cyclical Response	94
4.1	The Acceleration Principle	94
4.2	Frisch's Theory of Erratic Shocks	99
4.3	A Samuelson-Type Interaction Model	99
4.4	The Contribution of Hicks	106
4.5	Metzler's Perspective on Inventories	108
4.6	On Consumption and Investment	115

Part 3 Dynamics Extended

5	Lagged Effects in Consumption	119
5.1	Keynes' Law of Consumption: A Fall from Grace	119
5.2	A Tenuous Reconciliation	128
5.3	Habit Persistence and the Consumer	131
5.4	Discontinuous and Continuous Habit Persistence	138
5.5	The Coming of Wealth Theories	142
5.6	The Permanent Income Hypothesis	143
5.7	From Permanents to Measureds and Beyond	148
5.8	The Life Cycle Hypothesis	154
5.9	Shortsightedness: Similarities within a Principal Difference	156
5.10	Recapitulation and a Comment on Partial Adjustment	160
6	Investment, Inertia, and Temporal Motion	163
6.1	Contrapuntal Principles of Profits and Acceleration	164
6.2	Marginal Product and Marginal Efficiency	167
6.3	The Flexible Accelerator	177
6.4	On the Financial Side of Investment	183
6.5	An Inertial Multiplier-Accelerator Model	186
6.6	Lessons and Thoughts from Dynamics	192

Part 4 Mechanism of Policy

7	Policy Decisions under Certainty and Uncertainty	197
7.1	An Analytical Framework	199
7.2	Pairing Instruments and Targets	205

7.3	Instruments as Targets	208
7.4	Consequences of Uncertainty: Random Exogenous Variables	210
7.5	Enter Uncertainty Regarding Multipliers	213
7.6	Summing Up	219
8	Policy Discretion and Rules	221
8.1	A Challenge to Functional Finance	221
8.2	Feedback Controls and Their Effects	228
8.3	Feedbacks in Combination	235
8.4	Further Endorsement of Feedbacks	238
8.5	Rational Expectations: Completing the Circle?	243

Part 5 Equilibrium Dynamics and Policy

9	Celebrated Paradigms of Economic Growth	251
9.1	Dimensions of Technical Progress	252
9.2	The Model of Harrod	257
9.3	Professor Domar's Effort	260
9.4	The Neoclassical View of Growth	263
9.5	Neoclassical Growth under the CES	269
9.6	Cambridge Growth, Kaldor Style	273
9.7	The Cambridge of Robinson	279
9.8	Neoclassical Growth with a Cambridge Saving Function	283
10	Growth under Vintage Capital	286
10.1	From Vintages to Aggregates	287
10.2	Neoclassical Growth despite Embodiment	290
10.3	Basics of Aggregation Amplified	296
10.4	The Putty-Clay Hypothesis	300
10.5	A Model with Embodied Progress and Putty-Clay Capital	304
10.6	The Steady Growth Solution	308
10.7	Further Properties of Steady Growth: Comparative Dynamics	313
10.8	Reformulation under Adaptive Rationality	319
11	Growth and Policy: The Speed of Adjustment	325
11.1	Some Determinants of Adjustment Time	328
11.2	Linkage with the Elasticity of Substitution	334
11.3	An Apparatus for Examining Adjustment when Putty-Clay Rules	337
11.4	Response Paths: The Case of Static Expectations	342
11.5	Response Paths and Adaptive Rationality	346
11.6	Determinants Reconsidered under Putty-Clay	350
11.7	A Concluding Thought	357

Appendixes

A	Quantitative Tools of Economic Analysis	359
A.1	The Limit	359
A.2	The Derivative	361
A.3	Indeterminate Forms and l'Hospital's Rule	364
A.4	<i>Differential Calculus of Several Variables</i>	364
A.5	Homogeneous Functions	368
A.6	Maxima and Minima of Functions: One Independent Variable	369
A.7	Maxima and Minima: Several Independent Variables	371
A.8	Constrained Maxima and Minima	374
A.9	The Integral	377
A.10	Two Natural Functions: The Log and the Exponential	380
A.11	Linear and Convex Combinations	384
A.12	Mathematical Expectation and Its Arithmetic	385
A.13	Regression Analysis: Ordinary Least Squares	387
B	Mathematics of the Composite Indices of Leading, Coincident, and Lagging Indicators	393
C	Functional Forms in the CES Production Family	396
C.1	The Elasticity of Substitution and the CES Function	396
C.2	The Leontief Function	398
C.3	The Cobb-Douglas Function	399
C.4	The Linear-Isoquant Function	399
D	Outline for Solving Linear Difference Equations	400
D.1	The Solution Mechanism	400
D.2	Solution for the Basic Multiplier Model	402
D.3	Solution for the Interaction Model	404
	Indexes	407
	Name Index	
	Subject Index
