Preface		хi
Ack	teknowledgments	
Ch	apter 1 Introduction	
1.1 1.2 1.3 1.4 1.5	The Problems of Decision under Uncertainty Expected Utility Theory and Risk Some Nonsequential Decision Problems A Model for Sequential Decision Making Notes Problems	3 7 18 28 33 34
	Part I CONTROL OF UNCERTAIN SYSTEMS OVER A FINITE HORIZON	
Cho	apter 2 The Dynamic Programming Algorithm	
2.1 2.2 2.3 2.4	The Basic Problem The Dynamic Programming Algorithm Time Lags. Correlated Disturbances, and Forecasts Notes Problems	39 47 57 63 64
Cho	apter 3 Applications in Specific Areas	
3.1 3.2 3.3 3.4 3.5	Linear Systems with Quadratic Cost Functional —The Certainty Equivalence Principle Inventory Control Dynamic Portfolio Analysis Optimal Stopping Problems—Examples Notes	70 81 89 95 102
	Problems	103

viii CONTENTS

Chapter 4 Problems with Imperfect State Information			
4.1	Reduction to the Perfect State Information Case	111	
4.2	Sufficient Statistics	122	
4.3	Linear Systems with Quadratic Cost Functionals		
	-Separation of Estimation and Control	129	
4.4	Finite State Markov Chains—A Problem of Instruction	137	
4.5	Hypothesis Testing—Sequential Probability Ratio Test	144	
4.6 4.7	Sequential Sampling of a Large Batch Notes	152	
4./	Problems	153	
	Appendix Least-Squares Estimation – The Kalman Filter	158	
Cho	apter 5 Computational Aspects of Dynamic Programming —Suboptimal Control		
5.1	The Curse of Dimensionality	179	
5.2	Discretization Procedures and Their Convergence	180	
5.3 5.4	Suboptimal Controllers and the Notion of Adaptivity	191 193	
5.5	Naïve Feedback and Open-Loop Feedback Controllers Partial Open-Loop Feedback Controllers and the Efficient Utilization of Forecasts	202	
5.6	Control of Systems with Unknown Parameters—Self-Tuning Regulators	207	
5.7	Notes	214	
	Problems	215	
	Part II CONTROL OF UNCERTAIN SYSTEMS OVER AN INFINITE HORIZON		
	INFINITE HORIZON		
Cho	apter 6 Minimization of Total Expected Value—Discounted Cost		
	apter 6 Minimization of Total Expected Value—Discounted Cost	225	
6.1	apter 6 Minimization of Total Expected Value—Discounted Cost Convergence and Existence Results	225	
	apter 6 Minimization of Total Expected Value—Discounted Cost	225	
6.1	convergence and Existence Results Computational Methods—Successive Approximation, Policy Iteration, Linear		
6.1 6.2	convergence and Existence Results Computational Methods—Successive Approximation, Policy Iteration, Linear Programming	234	
6.1 6.2 6.3	Convergence and Existence Results Computational Methods—Successive Approximation, Policy Iteration, Linear Programming Contraction Mappings	234 249	
6.1 6.2 6.3 6.4 6.5 6.6	Convergence and Existence Results Computational Methods—Successive Approximation, Policy Iteration, Linear Programming Contraction Mappings Unbounded Costs per Stage	234 249 251	
6.1 6.2 6.3 6.4 6.5 6.6 6.7	Convergence and Existence Results Computational Methods—Successive Approximation, Policy Iteration, Linear Programming Contraction Mappings Unbounded Costs per Stage Linear Systems and Quadratic Cost Functionals Inventory Control Nonstationary and Periodic Problems	234 249 251 266 268 271	
6.1 6.2 6.3 6.4 6.5 6.6	Convergence and Existence Results Computational Methods—Successive Approximation, Policy Iteration, Linear Programming Contraction Mappings Unbounded Costs per Stage Linear Systems and Quadratic Cost Functionals Inventory Control Nonstationary and Periodic Problems Notes	234 249 251 266 268 271 277	
6.1 6.2 6.3 6.4 6.5 6.6 6.7	Convergence and Existence Results Computational Methods—Successive Approximation, Policy Iteration, Linear Programming Contraction Mappings Unbounded Costs per Stage Linear Systems and Quadratic Cost Functionals Inventory Control Nonstationary and Periodic Problems	234 249 251 266 268 271	
6.1 6.2 6.3 6.4 6.5 6.6 6.7 6.8	Convergence and Existence Results Computational Methods—Successive Approximation, Policy Iteration, Linear Programming Contraction Mappings Unbounded Costs per Stage Linear Systems and Quadratic Cost Functionals Inventory Control Nonstationary and Periodic Problems Notes	234 249 251 266 268 271 277	
6.1 6.2 6.3 6.4 6.5 6.6 6.7 6.8	Convergence and Existence Results Computational Methods—Successive Approximation, Policy Iteration, Linear Programming Contraction Mappings Unbounded Costs per Stage Linear Systems and Quadratic Cost Functionals Inventory Control Nonstationary and Periodic Problems Notes Problems	234 249 251 266 268 271 277	
6.1 6.2 6.3 6.4 6.5 6.6 6.7 6.8	Convergence and Existence Results Computational Methods—Successive Approximation, Policy Iteration, Linear Programming Contraction Mappings Unbounded Costs per Stage Linear Systems and Quadratic Cost Functionals Inventory Control Nonstationary and Periodic Problems Notes Problems Apter 7 Minimization of Total Expected Value—Undiscounted Cost	234 249 251 266 268 271 277 279	
6.1 6.2 6.3 6.4 6.5 6.6 6.7 6.8	Convergence and Existence Results Computational Methods—Successive Approximation, Policy Iteration, Linear Programming Contraction Mappings Unbounded Costs per Stage Linear Systems and Quadratic Cost Functionals Inventory Control Nonstationary and Periodic Problems Notes Problems Apter 7 Minimization of Total Expected Value—Undiscounted Cost Convergence and Existence Results	234 249 251 266 268 271 277 279	
6.1 6.2 6.3 6.4 6.5 6.6 6.7 6.8 <i>Cha</i>	Convergence and Existence Results Computational Methods—Successive Approximation, Policy Iteration, Linear Programming Contraction Mappings Unbounded Costs per Stage Linear Systems and Quadratic Cost Functionals Inventory Control Nonstationary and Periodic Problems Notes Problems Apper 7 Minimization of Total Expected Value—Undiscounted Cost Convergence and Existence Results Optimal Stopping	234 249 251 266 268 271 277 279	
6.1 6.2 6.3 6.4 6.5 6.6 6.7 6.8 Chac 7.1 7.2 7.3	Convergence and Existence Results Computational Methods—Successive Approximation, Policy Iteration, Linear Programming Contraction Mappings Unbounded Costs per Stage Linear Systems and Quadratic Cost Functionals Inventory Control Nonstationary and Periodic Problems Notes Problems Apper 7 Minimization of Total Expected Value—Undiscounted Cost Convergence and Existence Results Optimal Stopping Optimal Gambling Strategies	234 249 251 266 268 271 277 279	

CONTENTS		
Chapter 8 Minimization of Average Expected Value		
8.1 Existence Results	332	
8.2 Successive Approximation	342	
8.3 Policy Iteration	349	
8.4 Infinite State Space—Linear Systems with Quadratic Cost Functionals	353	
8.5 Notes Problems	356	
Appendix Existence Analysis under the Weak Accessibility Condition	357	
Appendix Existence Analysis under the weak Accessionity Condition	358	
APPENDIXES		
Appendix A Mathematical Review	367	
Appendix B On Optimization Theory	374	
Appendix C On Probability Theory	377	
Appendix D On Finite State Markov Chains	382	
References	387	
Index	395
