Generalized Descriptive Set Theory and Classification Theory

Sy-David Friedman
Tapani Hyttinen
Vadim Kulikov

ISSN 0065-9266 (print) ISSN 1947-6221 (online)

American Mathematical Society
Providence, Rhode Island

Contents

| | |
|--|----|
| Chapter 1. History and Motivation | 1 |
| Chapter 2. Introduction | 3 |
| 1. Notations and Conventions | 3 |
| 2. Ground Work | 4 |
| 3. Generalized Borel Sets | 10 |
| Chapter 3. Borel Sets, Δ_1^1 Sets and Infinitary Logic | 13 |
| 1. The Language $L_{\kappa+\kappa}$ and Borel Sets | 13 |
| 2. The Language $M_{\kappa+\kappa}$ and Δ_1^1 -Sets | 16 |
| Chapter 4. Generalizations From Classical Descriptive Set Theory | 23 |
| 1. Simple Generalizations | 23 |
| 2. On the Silver Dichotomy | 25 |
| 3. Regularity Properties and Definability of the CUB Filter | 30 |
| 4. Equivalence Modulo the Non-stationary Ideal | 39 |
| Chapter 5. Complexity of Isomorphism Relations | 51 |
| 1. Preliminary Results | 51 |
| 2. Classifiable | 56 |
| 3. Unclassifiable | 56 |
| Chapter 6. Reductions | 59 |
| 1. Classifiable Theories | 59 |
| 2. Unstable and Superstable Theories | 61 |
| 3. Stable Unsuperstable Theories | 68 |
| Chapter 7. Open Questions | 77 |
| Bibliography | 79 |
