# GIS Basics

Stephen Wise

London and New York

# Contents

<i>List of illustrations</i>	viii
<i>Preface</i>	xiv
<i>Acknowledgements</i>	xvi
<b>1 Introduction</b>	<b>1</b>
1.1 How computers solve problems	2
1.2 How computers store spatial data: vector and raster data models	5
1.3 Structure of the book	11
1.4 Pseudo-code	14
Further reading	18
<b>2 Vector data structures</b>	<b>20</b>
2.1 Storing points and lines	20
2.2 Storing area boundaries	26
2.3 Storing area boundaries: the topological approach	29
2.4 So what is topology?	32
2.5 And how does it help? The example of DIME	35
Further reading	38
<b>3 Vector algorithms for lines</b>	<b>40</b>
3.1 Simple line intersection algorithm	40
3.2 Why the simple line intersection algorithm won't work: a better algorithm	45
3.3 Dealing with wiggly lines	49
3.4 Calculations on lines: how long is a piece of string?	54
Further reading	59

<b>4</b>	<b>Vector algorithms for areas</b>	<b>61</b>
4.1	Calculations on areas: single polygons	61
4.2	Calculations on areas: multiple polygons	64
4.3	Point in polygon: simple algorithm	66
4.4	...and back to topology for a better algorithm	71
	Further reading	75
<b>5</b>	<b>The efficiency of algorithms</b>	<b>76</b>
5.1	How is algorithm efficiency measured?	76
5.2	The efficiency of the line intersection algorithm	79
5.3	More on algorithm efficiency	81
	Further reading	83
<b>6</b>	<b>Raster data structures</b>	<b>85</b>
6.1	Raster data structures: the array	86
6.2	Saving space: run length encoding and quadtrees	90
	Further reading	95
<b>7</b>	<b>Raster algorithms</b>	<b>96</b>
7.1	Raster algorithms: attribute query for run length encoded data	96
7.2	Raster algorithms: attribute query for quadtrees	99
7.3	Raster algorithms: area calculations	106
	Further reading	111
<b>8</b>	<b>Spatial indexing</b>	<b>113</b>
8.1	Binary search tree	113
8.2	Indexing data with a $k$ -d tree	118
8.3	Indexing vector data using a quadtree	122
8.4	Indexing raster data using Morton order	127
	Further reading	131
<b>9</b>	<b>Data structures for surfaces</b>	<b>133</b>
9.1	Data models for surfaces	134
9.2	Algorithms for creating grid surface models	139
9.3	Algorithms for creating a triangulated irregular network	144
9.4	Grid creation revisited	150
	Further reading	154

<b>10 Algorithms for surfaces</b>	<b>155</b>
10.1 Elevation, slope and aspect	155
10.2 Hydrological analysis using a TIN	162
10.3 Determining flow direction using a gridded DEM	165
10.4 Using the flow directions for hydrological analysis	169
Further reading	177
<b>11 Data structures and algorithms for networks</b>	<b>178</b>
11.1 Networks in vector and raster	178
11.2 Shortest path algorithm	180
11.3 Data structures for network data	187
11.4 The travelling salesman problem	195
Further reading	203
<i>Conclusion</i>	204
<i>Glossary</i>	205
<i>Bibliography</i>	211
<i>Index</i>	216
