

Preface	p. x
Acknowledgments	p. xiv
Errata and Extended-Bibliography	p. xvi
Introduction	p. 1
Series expansions	p. 1
First Example	p. 2
Comparison with finite element methods	p. 4
Comparisons with Finite Differences	p. 6
Parallel Computers	p. 9
Choice of basis functions	p. 9
Boundary conditions	p. 10
Non-Interpolating and Pseudospectral	p. 12
Nonlinearity	p. 13
Time-dependent problems	p. 15
FAQ: Frequently Asked Questions	p. 16
The Chrysalis	p. 17
Chebyshev and Fourier Series	p. 19
Introduction	p. 19
Fourier series	p. 20
Orders of Convergence	p. 25
Convergence Order	p. 27
Assumption of Equal Errors	p. 31
Darboux's Principle	p. 32
Why Taylor Series Fail	p. 35
Location of Singularities	p. 36
Corner Singularities and Compatibility Conditions	p. 37
FACE: Integration-by-Parts Bound	p. 41
Asymptotic Calculation of Fourier Coefficients	p. 45
Convergence Theory: Chebyshev Polynomials	p. 46
Last Coefficient Rule-of-Thumb	p. 50
Convergence Theory for Legendre Polynomials	p. 51
Quasi-Sinusoidal Rule of Thumb	p. 54
Witch of Agnesi Rule-of-Thumb	p. 56
Boundary Layer Rule-of-Thumb	p. 57
Galerkin and Weighted Residual Methods	p. 61
Mean Weighted Residual Methods	p. 61
Completeness and Boundary Conditions	p. 64
Inner Product and Orthogonality	p. 65
Galerkin Method	p. 67
Integration-by-Parts	p. 68
Galerkin Method: Case Studies	p. 70

Separation-of-Variables and the Galerkin Method	p. 76
Heisenberg Matrix Mechanics	p. 77
The Galerkin Method Today	p. 80
Interpolation, Collocation and All That	p. 81
Introduction	p. 81
Polynomial interpolation	p. 82
Gaussian Integration and Pseudospectral Grids	p. 86
Pseudospectral Is Galerkin Method via Quadrature	p. 89
Pseudospectral Errors	p. 93
Cardinal Functions	p. 98
Introduction	p. 98
Whittaker Cardinal or "Sinc" Functions	p. 99
Trigonometric Interpolation	p. 100
Cardinal Functions for Orthogonal Polynomials	p. 104
Transformations and Interpolation	p. 107
Pseudospectral Methods for BVPs	p. 109
Introduction	p. 109
Choice of Basis Set	p. 109
Boundary Conditions: Behavioral and Numerical	p. 109
"Boundary-Bordering"	p. 111
"Basis Recombination"	p. 112
Transfinite Interpolation	p. 114
The Cardinal Function Basis	p. 115
The Interpolation Grid	p. 116
Computing Basis Functions and Derivatives	p. 116
Higher Dimensions: Indexing	p. 118
Higher Dimensions	p. 120
Corner Singularities	p. 120
Matrix methods	p. 121
Checking	p. 121
Summary	p. 123
Linear Eigenvalue Problems	p. 127
The No-Brain Method	p. 127
QR/QZ Algorithm	p. 128
Eigenvalue Rule-of-Thumb	p. 129
Four Kinds of Sturm-Liouville Problems	p. 134
Criteria for Rejecting Eigenvalues	p. 137
"Spurious" Eigenvalues	p. 139
Reducing the Condition Number	p. 142
The Power Method	p. 145
Inverse Power Method	p. 149

Combining Global and Local Methods	p. 149
Detouring into the Complex Plane	p. 151
Common Errors	p. 155
Symmetry and Parity	p. 159
Introduction	p. 159
Parity	p. 159
Modifying the Grid to Exploit Parity	p. 165
Other Discrete Symmetries	p. 165
Axisymmetric and Apple-Slicing Models	p. 170
Explicit Time-Integration Methods	p. 172
Introduction	p. 172
Spatially-Varying Coefficients	p. 175
The Shamrock Principle	p. 177
Linear and Nonlinear	p. 178
Example: KdV Equation	p. 179
Implicitly-Implicit: RLW and QG	p. 181
Partial Summation, the FFT and MMT	p. 183
Introduction	p. 183
Partial Summation	p. 184
The Fast Fourier Transform: Theory	p. 187
Matrix Multiplication Transform	p. 190
Costs of the Fast Fourier Transform	p. 192
Generalized FFTs and Multipole Methods	p. 195
Off-Grid Interpolation	p. 198
Fast Fourier Transform: Practical Matters	p. 200
Summary	p. 200
Aliasing, Spectral Blocking, and Blow-Up	p. 202
Introduction	p. 202
Aliasing and Equality-on-the-Grid	p. 202
"2 h-Waves" and Spectral Blocking	p. 205
Aliasing Instability: History and Remedies	p. 210
Dealiasing and the Orszag Two-Thirds Rule	p. 211
Energy-Conserving: Constrained Interpolation	p. 213
Energy-Conserving Schemes: Discussion	p. 214
Aliasing Instability: Theory	p. 216
Summary	p. 218
Implicit Schemes and the Slow Manifold	p. 222
Introduction	p. 222
Dispersion and Amplitude Errors	p. 224
Errors and CFL Limit for Explicit Schemes	p. 226
Implicit Time-Marching Algorithms	p. 228

Semi-Implicit Methods	p. 229
Speed-Reduction Rule-of-Thumb	p. 230
Slow Manifold: Meteorology	p. 231
Slow Manifold: Definition and Examples	p. 232
Numerically-Induced Slow Manifolds	p. 236
Initialization	p. 239
The Method of Multiple Scales (Baer-Tribbia)	p. 241
Nonlinear Galerkin Methods	p. 243
Weaknesses of the Nonlinear Galerkin Method	p. 245
Tracking the Slow Manifold	p. 248
Three Parts to Multiple Scale Algorithms	p. 249
Splitting and Its Cousins	p. 252
Introduction	p. 252
Fractional Steps for Diffusion	p. 255
Pitfalls in Splitting, I: Boundary Conditions	p. 256
Pitfalls in Splitting, II: Consistency	p. 258
Operator Theory of Time-Stepping	p. 259
High Order Splitting	p. 261
Splitting and Fluid Mechanics	p. 262
Semi-Lagrangian Advection	p. 265
Concept of an Integrating Factor	p. 265
Misuse of Integrating Factor Methods	p. 267
Semi-Lagrangian Advection: Introduction	p. 270
Advection and Method of Characteristics	p. 271
Three-Level, 2D Order Semi-Implicit	p. 273
Multiply-Upstream SL	p. 275
Numerical Illustrations and Superconvergence	p. 277
Two-Level SL/SI Algorithms	p. 280
Noninterpolating SL and Numerical Diffusion	p. 281
Off-Grid Interpolation	p. 283
Off-Grid Interpolation: Generalities	p. 283
Spectral Off-grid	p. 284
Low-order Polynomial Interpolation	p. 284
McGregor's Taylor Series Scheme	p. 286
Higher Order SL Methods	p. 286
History and Relationships to Other Methods	p. 286
Summary	p. 289
Matrix-Solving Methods	p. 290
Introduction	p. 290
Stationary One-Step Iterations	p. 291
Preconditioning: Finite Difference	p. 293

Computing Iterates: FFT/Matrix Multiplication	p. 297
Alternative Preconditioners	p. 299
Raising the Order Through Preconditioning	p. 301
Multigrid: An Overview	p. 301
MRR Method	p. 304
Delves-Freeman Block-and-Diagonal Iteration	p. 307
Recursions and Formal Integration: Constant Coefficient ODEs	p. 312
Direct Methods for Separable PDE's	p. 314
Fast Iterations for Almost Separable PDEs	p. 317
Positive Definite and Indefinite Matrices	p. 318
Preconditioned Newton Flow	p. 320
Summary and Proverbs	p. 322
Coordinate Transformations	p. 323
Introduction	p. 323
Programming Chebyshev Methods	p. 323
Theory of 1-D Transformations	p. 325
Infinite and Semi-Infinite Intervals	p. 326
Maps for Endpoint and Corner Singularities	p. 327
Two-Dimensional Maps and Corner Branch Points	p. 329
Periodic Problems and the Arctan/Tan Map	p. 330
Adaptive Methods	p. 332
Almost-Equispaced Kosloff/Tal-Ezer Grid	p. 334
Methods for Unbounded Intervals	p. 338
Introduction	p. 338
Domain Truncation	p. 339
Domain Truncation for Rapidly-decaying Functions	p. 339
Domain Truncation for Slowly-Decaying Functions	p. 340
Domain Truncation for Time-Dependent Wave Propagation: Sponge Layers	p. 340
Whittaker Cardinal or "Sinc" Functions	p. 341
Hermite functions	p. 346
Semi-Infinite Interval: Laguerre Functions	p. 353
New Basis Sets via Change of Coordinate	p. 355
Rational Chebyshev Functions: TB <sub>n</sub>	p. 356
Behavioral versus Numerical Boundary Conditions	p. 361
Strategy for Slowly Decaying Functions	p. 363
Numerical Examples: Rational Chebyshev Functions	p. 366
Semi-Infinite Interval: Rational Chebyshev TL <sub>n</sub>	p. 369
Numerical Examples: Chebyshev for Semi-Infinite Interval	p. 370
Strategy: Oscillatory, Non-Decaying Functions	p. 372
Weideman-Cloot Sinh Mapping	p. 374
Summary	p. 377

Spherical and Cylindrical Geometry	p. 380
Introduction	p. 380
Polar, Cylindrical, Toroidal, Spherical	p. 381
Apparent Singularity at the Pole	p. 382
Polar Coordinates: Parity Theorem	p. 383
Radial Basis Sets and Radial Grids	p. 385
One-Sided Jacobi Basis for the Radial Coordinate	p. 387
Boundary Value and Eigenvalue Problems on a Disk	p. 389
Unbounded Domains Including the Origin in Cylindrical Coordinates	p. 390
Annular Domains	p. 390
Spherical Coordinates: An Overview	p. 391
The Parity Factor for Scalars: Sphere versus Torus	p. 391
Parity II: Horizontal Velocities and Other Vector Components	p. 395
The Pole Problem: Spherical Coordinates	p. 398
Spherical Harmonics: Introduction	p. 399
Legendre Transforms and Other Sorrows	p. 402
FFT in Longitude/MMT in Latitude	p. 402
Substitutes and Accelerators for the MMT	p. 403
Parity and Legendre Transforms	p. 404
Hurrah for Matrix/Vector Multiplication	p. 404
Reduced Grid and Other Tricks	p. 405
Schuster-Dilts Triangular Matrix Acceleration	p. 405
Generalized FFT: Multipoles and All That	p. 407
Summary	p. 407
Equiareal Resolution	p. 408
Spherical Harmonics: Limited-Area Models	p. 409
Spherical Harmonics and Physics	p. 410
Asymptotic Approximations, I	p. 410
Asymptotic Approximations, II	p. 412
Software: Spherical Harmonics	p. 414
Semi-Implicit: Shallow Water	p. 416
Fronts and Topography: Smoothing/Filters	p. 418
Fronts and Topography	p. 418
Mechanics of Filtering	p. 419
Spherical splines	p. 420
Filter Order	p. 422
Filtering with Spatially-Variable Order	p. 423
Topographic Filtering in Meteorology	p. 423
Resolution of Spectral Models	p. 425
Vector Harmonics and Hough Functions	p. 428
Radial/Vertical Coordinate: Spectral or Non-Spectral?	p. 429

Basis for Axial Coordinate in Cylindrical Coordinates	p. 429
Axial Basis in Toroidal Coordinates	p. 429
Vertical/Radial Basis in Spherical Coordinates	p. 429
Stellar Convection in a Spherical Annulus: Glatzmaier (1984)	p. 430
Non-Tensor Grids: Icosahedral, etc.	p. 431
Robert Basis for the Sphere	p. 433
Parity-Modified Latitudinal Fourier Series	p. 434
Projective Filtering for Latitudinal Fourier Series	p. 435
Spectral Elements on the Sphere	p. 437
Spherical Harmonics Besieged	p. 438
Elliptic and Elliptic Cylinder Coordinates	p. 439
Summary	p. 440
Special Tricks	p. 442
Introduction	p. 442
Sideband Truncation	p. 443
Special Basis Functions, I: Corner Singularities	p. 446
Special Basis Functions, II: Wave Scattering	p. 448
Weakly Nonlocal Solitary Waves	p. 450
Root-Finding by Chebyshev Polynomials	p. 450
Hilbert Transform	p. 453
Spectrally-Accurate Quadrature Methods	p. 454
Introduction: Gaussian and Clenshaw-Curtis Quadrature	p. 454
Clenshaw-Curtis Adaptivity	p. 455
Mechanics	p. 456
Integration of Periodic Functions and the Trapezoidal Rule	p. 457
Infinite Intervals and the Trapezoidal Rule	p. 458
Singular Integrands	p. 458
Sets and Solitaries	p. 460
Symbolic Calculations	p. 461
Introduction	p. 461
Strategy	p. 462
Examples	p. 465
Summary and Open Problems	p. 472
Teh Tau-Method	p. 473
Introduction	p. 473
[tau]-Approximation for a Rational Function	p. 474
Differential Equations	p. 476
Canonical Polynomials	p. 476
Nomenclature	p. 478
Domain Decomposition Methods	p. 479
Introduction	p. 479

Notation	p. 480
Connecting the Subdomains: Patching	p. 480
Weak Coupling of Elemental Solutions	p. 481
Variational Principles	p. 484
Choice of Basis and Grid	p. 485
Patching versus Variational Formalism	p. 486
Matrix Inversion	p. 487
The Influence Matrix Method	p. 488
Two-Dimensional Mappings and Sectorial Elements	p. 491
Prospectus	p. 492
Books and Reviews	p. 494
A Bestiary of Basis Functions	p. 495
Trigonometric Basis Functions: Fourier Series	p. 495
Chebyshev Polynomials: $T_n(x)$	p. 497
Chebyshev Polynomials of the Second Kind: $U_n(x)$	p. 499
Legendre Polynomials: $P_n(x)$	p. 500
Gegenbauer Polynomials	p. 502
Hermite Polynomials: $H_n(x)$	p. 505
Rational Chebyshev Functions: $TB_n(y)$	p. 507
Laguerre Polynomials: $L_n(x)$	p. 508
Rational Chebyshev Functions: $TL_n(y)$	p. 509
Graphs of Convergence Domains in the the Complex Plane	p. 511
Direct Matrix-Solvers	p. 514
Matrix Factorizations	p. 514
Banded Matrix	p. 518
Matrix-of-Matrices Theorem	p. 520
Block-Banded Elimination: the "Lindzen-Kuo" Algorithm	p. 520
Blck and "Bordered" Matrices	p. 522
Cyclic Banded Matrices (Periodic Boundary Conditions)	p. 524
Parting shots	p. 524
Newton Iteration	p. 526
Introduction	p. 526
Examples	p. 529
Eigevalue Problems	p. 531
Summary	p. 534
The Continuation Method	p. 536
Introduction	p. 536
Examples	p. 537
Initialization Strategies	p. 538
Limit Points	p. 542
Bifurcation points	p. 544

Pseudoarclength Continuation	p. 546
Change-of-Coordinate Derivative Transformations	p. 550
Cardinal Functions	p. 561
Introduction	p. 561
General Fourier Series: Endopint Grid	p. 562
Fourier Cosine Series: Endpoint Grid	p. 563
Fourier Sine Series: Endpoint Grid	p. 565
Cosine Cardinal Functions: Interior Grid	p. 567
Sine Cardinal Functions: Interior Grid	p. 568
Sinc(x): Whittaker cardinal function	p. 569
Chebyshev Gauss-Lobatto ("Endpoints")	p. 570
Chebyshev Polynomials: Interior or "Roots" Grid	p. 571
Legendre Polynomials: Gauss-Lobatto Grid	p. 572
Transformation of Derivative Boundary Conditions	p. 575
Glossary	p. 577
Index	p. 586
References	p. 595
