Preface to First Edition xvii
Preface to Second Edition xix
Acknowledgments xxi

Part I: Basics 1

Chapter 1 Introduction to Systems Modeling Concepts 3

1.1 Systems Specification Formalisms 3
1.1.1 Relation to Object Orientation 5
1.1.2 Evolution of Systems Formalisms 6
1.1.3 Combining Continuous and Discrete Formalisms 7
1.1.4 Quantized Systems 8
1.1.5 Extensions of DEVS 9
1.2 Levels of System Knowledge 11
1.3 Introduction to the Hierarchy of Systems Specifications 13
1.4 The Specification Levels Informally Presented 14
1.4.1 Observation Frame 14
1.4.2 I/O Behavior and I/O Function 16
1.4.3 State Transition System Specification 17
1.4.4 Coupled Component System Specification 18
1.5 System Specification Morphisms: Basic Concepts 18
1.6 Summary 21
1.7 Sources 22
Definitions, Acronyms, Abbreviations 23

Chapter 2 Framework for Modeling and Simulation 25

2.1 The Entities of the Framework 25
2.1.1 Source System 25
2.1.2 Experimental Frame 27
2.1.3 Model 29
2.1.4 Simulator 30
2.2 Primary Relations Among Entities 30
2.2.1 Modeling Relation: Validity 30
2.2.2 Simulation Relation: Simulator Correctness 32
2.3 Other Important Relationships 32
2.3.1 Modeling As Valid Simplification 32
2.3.2 Experimental Frame: Model Relationships 33
2.4 Time 34
2.5 Summary 35
2.6 Sources 36

Chapter 3 Modeling Formalisms and Their Simulators 37

3.1 Introduction 37
3.2 Discrete Time Models and Their Simulators 37
3.2.1 Discrete Time Simulation 39
3.2.2 Cellular Automata 40
3.2.3 Cellular Automaton Simulation Algorithms 43
3.2.4 Discrete Event Approach to Cellular Automaton Simulation 44
3.2.5 Switching Automata/Sequential Machines 45
3.2.6 Linear Discrete Time Networks and Their State Behavior 47
3.3 Differential Equation Models and Their Simulators 49
3.3.1 Continuous System Simulation 50
3.3.2 Feedback in Continuous Systems 55
3.3.3 Elementary Linear Systems 56
3.3.4 Nonlinear Oscillators: Limit Cycles and Chaotic Behaviors 61
3.3.5 Continuous System Simulation Languages and Systems 64
3.4 Discrete Event Models and Their Simulators 66
3.4.1 Introduction 66
3.4.2 Discrete Event Cellular Automata 67
3.4.3 Discrete Event World Views 70
3.5 Summary 72
3.6 Sources 73

Chapter 4 Introduction to Discrete Event System Specifications (DEVS) 75

4.1 Introduction 75
4.2 Classic DEVS System Specification 75
4.2.1 DEVS Examples 77
4.2.2 Classic DEVS With Ports 84
4.2.3 Classic DEVS Coupled Models 85
4.3 Parallel DEVS System Specification 89
4.3.1 Processor With Buffer 90
4.3.2 Parallel DEVS Coupled Models 91
4.4 Hierarchical Models 93
4.5 Object-Oriented Implementations of DEVS: An Introduction 93
4.5.1 Structural Inheritance 94
4.6 Summary 96
4.7 Sources 96

Chapter 5 Hierarchy of System Specifications 99

5.1 Time Base 99
5.2 Segments and Trajectories 100
5.2.1 Piecewise Continuous Segments 102
5.2.2 Piecewise Constant Segments 103
5.2.3 Event Segments 103
5.2.4 Sequences 104

5.3 I/O Observation Frame 104
5.4 I/O Relation Observation 105
5.5 I/O Function Observation 107
5.6 I/O System 108
5.6.1 Going from System Structure to Behavior 110
5.6.2 Time-Invariant Systems 112
5.6.3 Special Cases: Input-Free and Memoryless Systems 115
5.7 Iterative Specification of Systems 116
5.7.1 Generator Segments 117
5.7.2 Generator State Transition Systems 120
5.8 Multivariable Sets and Structured Systems 123
5.9 Multicomponent System Specification 125
5.10 Network of System Specifications (Coupled Systems) 127
5.10.1 Coupled System Specification 128
5.10.2 Coupled System Specification at the Structured System Level 129
5.11 Summary 131
5.12 Sources 133

Part II Modeling Formalisms and Simulation Algorithms 135

Chapter 6 Basic Formalisms: DEVS, DTSS, DESS 137

6.1 Basic System Specification Formalisms 137
6.2 Discrete Event System Specifications (DEVS) 138
6.2.1 Classic DEVS 138
6.2.2 Structure Specified by DEVS 139
6.2.3 Legitimacy: When is the Structure Specified by a DEVS Really a System? 141
6.3 Parallel DEVS 142
6.3.1 System Specified by Parallel DEVS 144
6.4 Discrete Time System Specification (DTSS) 144
6.5 Differential Equation System Specification (DESS) 146
6.6 Summary 147

Chapter 7 Basic Formalisms: Coupled Multicomponent Systems 149

7.1 Discrete Event Specified Network Formalism 149
7.1.1 Classic DEVS Coupled Models 150
7.1.2 Parallel DEVS Coupled Models 152
7.2 Multicomponent Discrete Event System Formalism 155
7.2.1 Event Scheduling Models 159
7.2.2 Combined Event Scheduling, Activity Scanning Simulation Strategy 159
7.2.3 Process Interaction Models 161
7.2.4 Translating Nonmodular Multicomponent DEVS Models into Modular Form 161
7.2.5 State Updating in Distributed Simulation 162

7.3 Discrete Time Specified Network Formalism 163
7.4 Multicomponent Discrete Time System Formalism 166
7.5 Differential Equation Specified Network Formalism 168
7.6 Multicomponent Differential Equations Specified System Formalism 169
7.7 Summary 171
7.8 Sources 172
Appendix 173

Chapter 8 Simulators for Basic Formalisms 175

8.1 Simulators for DEVS 176
8.1.1 Simulator for Basic DEVS 177
8.1.2 Simulators for Modular DEVS Networks 180
8.1.3 The Root-Coordinator 184
8.2 DEVS Bus 184
8.2.1 Simulator for Event Scheduling Multicomponent DEVS 185
8.2.2 Simulator for Activity Scanning and Process Interaction Multicomponent DEVS 187
8.3 Simulators for DTSS 189
8.3.1 Simulator for Atomic DTSS 190
8.3.2 Simulator for Instantaneous Functions 192
8.3.3 Simulator for Nonmodular Multicomponent DTSS 192
8.3.4 Simulators for Coupled DTSS 193
8.3.5 The Root-Coordinator 196
8.4 Simulators for DESS 197
8.4.1 Causal Simulator for DESS 197
8.4.2 Noncausal Simulator for DESS 198
8.5 Summary 201
8.6 Sources 201

Chapter 9 Multiformalism Modeling and Simulation 203

9.1 Brief Introduction to Specialized Formalisms 203
9.1.1 DESS Subformalisms: Systems Dynamics and Bond Graphs 203
9.1.2 DEVS Subformalisms: Petri Nets and Statecharts 204
9.2 Multiformalism Modeling 206
9.3 DEV&DESS: Combined Discrete Event and Differential Equation Specified Systems 208
9.3.1 A Simple Example: DEV&DESS Model of a Barrel Filler 210
9.3.2 System Specified by a DEV&DESS 213
9.4 Multimodeling with DEV&DESS 214
9.4.1 Example: Pot System with Command Inputs and Threshold Value Outputs 216
9.5 Coupled DEV&DESS: Network of Multiformalism Models 217
9.5.1 Basic Formalisms are Subsumed by DEV&DESS 217
9.5.2 Coupled DEV&DESS Formalism 219

9.6 Simulator for DEVS&DESS 222
9.6.1 The DEV&DESS-Simulator and-Coordinator 223
9.6.2 Integrating Different Modeling Formalisms 226
9.7 Sources 227
Appendix A: The System Specified By a DEV&DESS 229
Appendix B: The System Specified By a Multiformalism System–Closure Under Coupling of Networks of DEV&DESS 231

Chapter 10 DEVS-Based Extended Formalisms 233

10.1 Stochastic Systems: Conventional Approach to Uncertainty 233
10.2 DSDEVS (Dynamic Structure DEVS) 235
10.2.1 DSDEVS Closure Under Coupling 237
10.2.2 Example: Adaptive Processing Architectures 237
10.3 Symbolic DEVS 240
10.3.1 Symbolic DEVS Coupled Models 241
10.3.2 Example: Performance Evaluation of Basic Architectures 241
10.4 Fuzzy DEVS 244
10.4.1 Basic Fuzzy DEVS Formalism 247
10.4.2 Embedding Fuzzy DEVS in DEVS 250
10.4.3 Example: Fuzzy DEVS Model for Boiler System 251
10.5 Real-Time DEVS (RT-DEVS) 252
10.5.1 Formal Specification of Real-Time DEVS Models 252
10.5.2 Execution of RT-DEVS Models 253
10.5.3 Example of RT-DEVS: Elevator Control 254
10.5.4 Real-Time Simulation and RT-DEVS 257
10.6 Summary 259
10.7 Sources 259

Chapter 11 Parallel and Distributed Discrete Event Simulation 261

11.1 Problem Characterization of Parallel Discrete Event Simulation 262
11.2 Conservative Parallel Discrete Event Simulation 264
11.2.1 Conservative Parallel DEVS Simulator 268
11.3 Optimistic Parallel Discrete Event Simulation 273
11.3.1 Time-Warp DEVS Simulator 275
11.3.2 Riskfree Optimistic DEVS Simulator 281
11.4 Parallel DEVS Simulator 284
11.5 Summary 287
11.6 Sources 287

Part III System Morphisms: Abstraction, Representation, Approximation 293

Chapter 12 Hierarchy of System Morphisms 295

12.1 The I/O Frame Morphism 297
12.2 The I/O Relation Observation Morphism 297

12.3 The I/O Function Morphism 298
12.3.1 IOFO System Morphism Implies IORO System Morphism 300
12.4 The I/O System Morphism 301
12.4.1 I/O System Morphism Implies IOFO and IORO Morphism 302
12.4.2 The Lattice of Partitions and the Reduced Version of a System 305
12.5 System Morphism for Iteratively Specified Systems 308
12.5.1 Iterative Specification Morphism Implies I/O System Morphism 309
12.5.2 Specialization of Morphisms for Iteratively Specified Systems 310
12.6 The Structured System Morphism 311
12.7 Multicomponent System Morphism 314
12.8 The Network of Systems Morphism 317
12.9 Homomorphism and Cascade Decompositions 320
12.10 Characterization of Realizable I/O Relations and Functions 324
12.10.1 Canonical Realization 326
12.11 Summary 327
12.12 Sources 327

Chapter 13 Abstraction: Constructing Model Families 329

13.1 Scope/Resolution/Interaction Product 329
13.1.1 Complexity 330
13.1.2 Size/Resolution Trade-Off: Simplification Methods 332
13.1.3 How Objectives and Experimental Frame Determine Abstraction Possibilities 334
13.2 Integrated Families of Models 335
13.2.1 Integrated Model Family Example: Space Travel 335
13.2.2 Space Travel Base Model 336
13.3 Aggregation: Homogeneity/Coupling Indifference Principles 339
13.3.1 Coupling Conditions Imposed by Anonymity 342
13.3.2 Constructing Lumped Models Based on Identity-Erasing Aggregation 344
13.3.3 All-To-One Coupling 348
13.3.4 Example of Aggregation Model Construction: Space Travel 349
13.3.5 Constructing Aggregations Through State and Block Refinement 351
13.3.6 Time Scale Relations 353
13.3.7 Universality/Applicability of Identity-Erasing Aggregations 353
13.4 Abstractions for Event-Based Control 354
13.4.1 Boundary-Based DEVS 354
13.4.2 DEVS Abstraction: Space Travel Example 357
13.5 Parameter Morphisms 358
13.5.1 Linear Systems Parameter Morphisms 359

13.5.2 Example Lumpable: Linear DTSS and Parameter Morphisms 360
13.5.3 Constraints on Parameter and State Spaces: Disaggregation 362
13.5.4 Using Parameter Morphisms in an Integrated Model Family 362
13.6 Summary 364
13.7 Sources 364

Chapter 14 Verification, Validation, Approximate Morphisms: Living with Error ... 367

14.1 Verification 367
14.2 Validation at the Behavioral Level 368
14.2.1 Quantitative Comparison 371
14.2.2 Qualitative Comparison 372
14.3 Performance/Validity (e.g., Speed/Accuracy) Trade-off 373
14.4 Approximate Morphisms and Error Behavior 377
14.4.1 Approximate Morphisms and the Specification Hierarchy 377
14.4.2 Approximate Homomorphisms and Error Propagation 378
14.4.3 Example: Approximate Linear System Homomorphisms 382
14.5 Approximate Morphisms at the Coupled System Level 384
14.5.1 Error-Driven Aggregation Refinement 384
14.6 Validation at Structural Levels 387
14.6.1 Calibration, Parameter Identification, Sensitivity 388
14.6.2 Local/Global, Cross-Model Validation 388
14.7 Sources 389

Chapter 15 DEVS and DEVS-like Systems: Universality and Uniqueness 391

15.1 Relation Between Classical and Parallel DEVS: Is There One or Two? 391
15.2 Universality and Uniqueness of DEVS 393
15.2.1 Systems with DEVS Interfaces 393
15.2.2 Behavior of DEVS-like Systems 395
15.2.3 Universality of DEVS 396
15.2.4 Example: DEVS Realization of DEVS-like System 397
15.2.5 Uniqueness of DEVS 398
15.3 DEVS Representation of DTSS 399
15.3.1 Input-Free Moore 400
15.3.2 Multiported FNSS 400
15.3.3 Moore DTSS with Input 401
15.3.4 Mealy DTSS 401
15.3.5 DEVS Strong Simulation of DTSS Coupled Models 401
15.4 Efficient DEVS Simulation of DTSS Networks 403
15.5 Summary 405
15.6 Sources 405
Appendix: Isomorphically Representing DEVS-like Systems by DEVS 406

Chapter 16 DEVS Representation of Systems 411

16.1 DEVS Bus Revisited 411
16.1.1 Approaches to DEVS Representation of Continuous Systems 412
16.2 DEVS Representation Using Conventional Approach 414
16.2.1 DTSS Simulation of a DESS Integrator 415
16.2.2 Simulation of Coupled Systems by DTSS 416
16.2.3 Discretized Simulation of Coupled DESS with Arbitrarily Small Error 418
16.2.4 DEVS Representation of DESS via DTSS Simulation 419
16.3 Quantization: An Alternative Approach for DEVS Representation 419
16.3.1 Quantized Systems 421
16.3.2 Exactly Quantizable Systems 422
16.3.3 Quantized Integrator: Approximation of DESS 424
16.3.4 Coupled Systems with Quantized Components 425
16.3.5 Quantized Simulation of Coupled Systems with Arbitrarily Small Error 427
16.3.6 Quantized Simulation of Coupled DESS with Arbitrarily Small Error 429
16.3.7 DEVS Representation of Quantized Systems 430
16.3.8 DEVS Representation of Quantized Integrator 431
16.3.9 DEVS Simulation of Coupled Quantized Systems 432
16.3.10 Quantization-Based DEVS Simulation of DESS 433
16.4 Simulation Study of Quantization 434
16.4.1 Some Indicative Simulation Results 434
16.4.2 Comparing Quantized DEVS with Pure DTSS Simulation of DESS 437
16.4.3 Insight from Second-Order Linear Oscillator 439
16.5 Conjectures for Further Research 441
16.6 Summary 443
16.7 Sources 444
16.8 Problems 445
Appendix 1 Closed Loop DTSS Simulation 447
Appendix 2 Uniformly Segmentable Input Sets 449
Appendix 3 Exact Simulation by DEVS 451
Appendix 4 Closed Loop Quantized Simulation 452

Part IV System Design and Modeling and Simulation Environments 455

Chapter 17 DEVS-Based Design Methodology 457

17.1 Methodology Overview 457
17.2 DEVS Definition Language 459
17.2.1 Atomic DEVS Definition 460
17.2.2 The Coupled DEVS Definition 462
17.2.3 Example: Generator-Buffer-Processor Model 463

17.3 Execution of DEVS Definition 466
17.4 Logical Analysis: Model Verification 468
17.4.1 Assertional Specification of Temporal Logic 468
17.4.2 TL Specification Language 473
17.5 Model Verification by Language Acceptance Checking 475
17.6 Performance Evaluation 477
17.7 Implementation: DEVS Model Execution 477
17.8 Summary 479
17.9 Sources 479

Chapter 18 System Entity Structure/Model Base Framework 481

18.1 Model Base Management by System Entity Structure 481
18.2 System Entity Structure 482
18.3 System Entity Structure/Model Base (SES/MB) Framework 485
18.4 Example: Design of a Transaction Processing System 486
18.4.1 System Entity Structure 487
18.4.2 Model Base 487
18.4.3 Pruning and Model Synthesis 487
18.4.4 Performance Evaluation 488
18.5 Automatic Pruning of an SES 490
18.6 Summary 491
18.7 Sources 492

Chapter 19 Collaboration and the Future 495

19.1 An Architecture for M&S 495
19.2 How Does Collaboration Support M&S? 497
19.2.1 Model Construction 497
19.2.2 Model Composition 497
19.2.3 Supporting M&S with Collaboration Environments 497
19.3 Summary 499
19.4 Sources 499

Index 501
