|---|------|
| <b>Foreword</b>                                     | v    |
| <b>Preface</b>                                      | xvii |
| <b>Chapter 1 Introduction</b>                       | 1    |
| 1.1 Basic Concepts and Examples                     | 2    |
| 1.2 Overview by Chapter                             | 8    |
| 1.2.1 Inference                                     | 9    |
| 1.2.2 Search  | 10   |
| 1.3 Mathematical Background                         | 12   |
| 1.3.1 Sets, Domains, and Tuples                     | 13   |
| 1.3.2 Relations                                     | 13   |
| 1.3.3 Graphs: General Concepts                      | 17   |
| 1.3.4 Background in Complexity                      | 19   |
| 1.4 Bibliographical Notes                           | 21   |
| 1.5 Exercises                                       | 21   |
| <b>Part I Basics of Constraint Processing</b>       | 23   |
| <b>Chapter 2 Constraint Networks</b>                | 25   |
| 2.1 Constraint Networks and Constraint Satisfaction | 25   |
| 2.1.1 The Basics of the Framework                   | 25   |
| 2.1.2 Solutions of a Constraint Network             | 27   |
| 2.1.3 Constraint Graphs                             | 29   |
| 2.2 Numeric and Boolean Constraints                 | 34   |
| 2.2.1 Numeric Constraints                           | 34   |
| 2.2.2 Boolean Constraints and Propositional CNF     | 35   |
| 2.2.3 Combinatorial Circuits Diagnosis              | 37   |

|                  |  |           |
|------------------|--|-----------|
| 2.3              | Properties of Binary Constraint Networks                   | 38        |
| 2.3.1            | Equivalence and Deduction with Constraints                 | 38        |
| 2.3.2            | The Minimal and the Projection Networks                    | 40        |
| 2.3.3            | Binary-Decomposable Networks                               | 44        |
| 2.4              | Summary  | 45        |
| 2.5              | Bibliographical Notes                                      | 45        |
| 2.6              | Exercises  | 45        |
| <b>Chapter 3</b> | <b>Consistency-Enforcing and Constraint Propagation</b>    | <b>51</b> |
| 3.1              | Why Propagate Constraints?                                 | 51        |
| 3.2              | Arc-Consistency  | 54        |
| 3.3              | Path-Consistency   | 61        |
| 3.4              | Higher Levels of $i$ -Consistency                          | 67        |
| 3.4.1            | A Note on 3-Consistency and Path-Consistency               | 69        |
| 3.5              | Arc-Consistency for Nonbinary Constraints                  | 70        |
| 3.5.1            | Generalized Arc-Consistency                                | 70        |
| 3.5.2            | Global Constraints   | 71        |
| 3.5.3            | Bounds-Consistency   | 73        |
| 3.6              | Constraint Propagation for Numeric and Boolean Constraints | 74        |
| 3.6.1            | Algebraic Constraints                                      | 74        |
| 3.6.2            | Boolean Constraint Propagation                             | 75        |
| 3.7              | Trees, Bivalued Networks, and Horn Theories                | 76        |
| 3.8              | Summary  | 77        |
| 3.9              | Bibliographical Notes                                      | 78        |
| 3.10             | Exercises  | 80        |
| <b>Chapter 4</b> | <b>Directional Consistency</b>                             | <b>85</b> |
| 4.1              | Graph Concepts: Induced Width                              | 86        |
| 4.1.1            | Greedy Algorithms for Finding Induced Widths               | 88        |
| 4.1.2            | Chordal Graphs   | 90        |
| 4.1.3            | $k$ -Trees   | 91        |
| 4.2              | Directional Local Consistency                              | 91        |
| 4.2.1            | Directional Arc-Consistency                                | 92        |
| 4.2.2            | Directional Path-Consistency                               | 94        |
| 4.2.3            | Directional $i$ -Consistency                               | 96        |
| 4.2.4            | Graph Aspects of Directional Consistency                   | 98        |
| 4.3              | Width versus Local Consistency                             | 100       |
| 4.3.1            | Solving Trees: Case of Width 1                             | 100       |

|                  |  |            |
|------------------|--|------------|
| 4.3.2            | Solving Width-2 Problems                     | 102        |
| 4.3.3            | Solving Width- $i$ Problems                  | 103        |
| 4.4              | Adaptive Consistency and Bucket Elimination  | 104        |
| 4.5              | Summary                                      | 110        |
| 4.6              | Bibliographical Notes                        | 111        |
| 4.7              | Exercises                                    | 112        |
| <b>Chapter 5</b> | <b>General Search Strategies: Look-Ahead</b> | <b>117</b> |
| 5.1              | The State Space Search                       | 118        |
| 5.1.1            | Variable Ordering                            | 119        |
| 5.1.2            | Consistency Level                            | 119        |
| 5.2              | Backtracking                                 | 123        |
| 5.2.1            | Complexity of Extending a Partial Solution   | 125        |
| 5.2.2            | Improvements to Backtracking                 | 127        |
| 5.3              | Look-Ahead Strategies                        | 130        |
| 5.3.1            | Look-Ahead Algorithms for Value Selection    | 131        |
| 5.3.2            | Look-Ahead for Variable Ordering             | 137        |
| 5.3.3            | The Cycle-Cutset Effect                      | 140        |
| 5.3.4            | An Implementation Issue                      | 141        |
| 5.3.5            | Extensions to Stronger Look-Aheads           | 141        |
| 5.4              | Satisfiability: Look-Ahead in Backtracking   | 142        |
| 5.5              | Summary                                      | 144        |
| 5.6              | Bibliographical Notes                        | 144        |
| 5.7              | Exercises                                    | 146        |
| <b>Chapter 6</b> | <b>General Search Strategies: Look-Back</b>  | <b>151</b> |
| 6.1              | Conflict Sets                                | 151        |
| 6.2              | Backjumping Styles                           | 153        |
| 6.2.1            | Gaschnig's Backjumping                       | 154        |
| 6.2.2            | Graph-Based Backjumping                      | 155        |
| 6.2.3            | Conflict-Directed Backjumping                | 162        |
| 6.2.4            | $i$ -Backjumping                             | 166        |
| 6.3              | Complexity of Backjumping                    | 166        |
| 6.4              | Learning Algorithms                          | 169        |
| 6.4.1            | Graph-Based Learning                         | 170        |
| 6.4.2            | Deep versus Shallow Learning                 | 172        |
| 6.4.3            | Jumpback Learning                            | 173        |
| 6.4.4            | Bounded and Relevance-Bounded Learning       | 174        |

|                  |   |            |
|------------------|---|------------|
| 6.4.5            | Nonsystematic Randomized Backtrack Learning     | 174        |
| 6.4.6            | Complexity of Backtracking with Learning        | 175        |
| 6.5              | <b>Look-Back Techniques for Satisfiability</b>  | <b>175</b> |
| 6.6              | <b>Integration and Comparison of Algorithms</b> | <b>178</b> |
| 6.6.1            | Integrating Backjumping and Look-Ahead          | 178        |
| 6.6.2            | Comparison of Algorithms                        | 180        |
| 6.7              | <b>Summary</b>                                  | <b>186</b> |
| 6.8              | <b>Bibliographical Notes</b>                    | <b>186</b> |
| 6.9              | <b>Exercises</b>                                | <b>188</b> |
| <b>Chapter 7</b> | <b>Stochastic Greedy Local Search</b>           | <b>191</b> |
| 7.1              | <b>Greedy Local Search</b>                      | <b>192</b> |
| 7.1.1            | The Algorithm                                   | 192        |
| 7.1.2            | Heuristics for Improving Local Search           | 194        |
| 7.2              | <b>Random Walk Strategies</b>                   | <b>195</b> |
| 7.2.1            | WalkSAT   | 195        |
| 7.2.2            | Properties of Local Search                      | 197        |
| 7.2.3            | Examples of Empirical Evaluation                | 198        |
| 7.3              | <b>Hybrids of Local Search and Inference</b>    | <b>198</b> |
| 7.3.1            | The Effect of Constraint Propagation on SLS     | 198        |
| 7.3.2            | Local Search on Cycle-Cutset                    | 200        |
| 7.4              | <b>Summary</b>                                  | <b>205</b> |
| 7.5              | <b>Bibliographical Notes</b>                    | <b>206</b> |
| 7.6              | <b>Exercises</b>                                | <b>207</b> |
