*Introduction* v  
*On the Origins of The Feynman  
Lectures on Physics*

A MEMOIR BY MATTHEW SANDS 1

---

## 1 *Prerequisites*

REVIEW LECTURE A

---

- 1-1 Introduction to the review lecture 15
- 1-2 Caltech from the bottom 16
- 1-3 Mathematics for physics 18
- 1-4 Differentiation 19
- 1-5 Integration 22
- 1-6 Vectors 23
- 1-7 Differentiating vectors 29
- 1-8 Line integrals 31
- 1-9 A simple example 33
- 1-10 Triangulation 38

## 2 *Laws and Intuition*

REVIEW LECTURE B

---

- 2-1 The physical laws 41
- 2-2 The nonrelativistic approximation 43
- 2-3 Motion with forces 44
- 2-4 Forces and their potentials 47
- 2-5 Learning physics by example 49
- 2-6 Understanding physics physically 50
- 2-7 A problem in machine design 53
- 2-8 Earth's escape velocity 64

Alternate Solutions 67

A Finding the acceleration of the weight using geometry 67

B Finding the acceleration of the weight using trigonometry 68

C Finding the force on the weight using torque and angular momentum 69

## 3 *Problems and Solutions*

REVIEW LECTURE C

---

3-1 Satellite motion 71

3-2 Discovery of the atomic nucleus 76

3-3 The fundamental rocket equation 80

3-4 A numerical integration 82

3-5 Chemical rockets 84

3-6 Ion propulsion rockets 85

3-7 Photon propulsion rockets 88

3-8 An electrostatic proton beam deflector 88

3-9 Determining the mass of the pi meson 91

## 4 *Dynamical Effects and Their Applications*

REVIEW LECTURE D

---

4-1 A demonstration gyroscope 96

4-2 The directional gyro 97

4-3 The artificial horizon 98

4-4 A ship-stabilizing gyroscope 99

4-5 The gyrocompass 100

4-6 Improvements in gyroscopes design and construction 104

4-7 Accelerometers 111

4-8 A complete navigational system 115

4-9 Effects of the earth's rotation 119

4-10 The spinning disk 122

4-11 Earth's nutation 125

4-12 Angular momentum in astronomy 125

4-13 Angular momentum in quantum mechanics 127

4-14 After the lecture 128

## 5 *Selected Exercises*

---

- 5-1 Conservation of energy, statics 135
- 5-2 Kepler's laws and gravitation 138
- 5-3 Kinematics 138
- 5-4 Newton's laws 139
- 5-5 Conservation of momentum 141
- 5-6 Vectors 143
- 5-7 Nonrelativistic two-body collisions in 3 dimensions 144
- 5-8 Forces 144
- 5-9 Potentials and fields 145
- 5-10 Units and dimensions 147
- 5-11 Relativistic energy and momentum 147
- 5-12 Rotations in two dimensions, the center mass 148
- 5-13 Angular momentum, the moment of inertia 149
- 5-14 Rotation in three dimensions 151
- Answers to Exercises 155
