<i>Preface</i>	<i>page</i>	<i>xiii</i>
1	Confidence, likelihood, probability: An invitation	1
1.1	Introduction	1
1.2	Probability	4
1.3	Inverse probability	6
1.4	Likelihood	7
1.5	Frequentism	8
1.6	Confidence and confidence curves	10
1.7	Fiducial probability and confidence	14
1.8	Why not go Bayesian?	16
1.9	Notes on the literature	19
2	Inference in parametric models	23
2.1	Introduction	23
2.2	Likelihood methods and first-order large-sample theory	24
2.3	Sufficiency and the likelihood principle	30
2.4	Focus parameters, pivots and profile likelihoods	32
2.5	Bayesian inference	40
2.6	Related themes and issues	42
2.7	Notes on the literature	48
	Exercises	50
3	Confidence distributions	55
3.1	Introduction	55
3.2	Confidence distributions and statistical inference	56
3.3	Graphical focus summaries	65
3.4	General likelihood-based recipes	69
3.5	Confidence distributions for the linear regression model	72
3.6	Contingency tables	78
3.7	Testing hypotheses via confidence for alternatives	80
3.8	Confidence for discrete parameters	83

Contents

<i>Preface</i>	<i>page</i>	<i>xiii</i>
1 Confidence, likelihood, probability: An invitation		
1.1 Introduction		1
1.2 Probability		1
1.3 Inverse probability		4
1.4 Likelihood		6
1.5 Frequentism		7
1.6 Confidence and confidence curves		8
1.7 Fiducial probability and confidence		10
1.8 Why not go Bayesian?		14
1.9 Notes on the literature		16
		19
2 Inference in parametric models		
2.1 Introduction		23
2.2 Likelihood methods and first-order large-sample theory		23
2.3 Sufficiency and the likelihood principle		24
2.4 Focus parameters, pivots and profile likelihoods		30
2.5 Bayesian inference		32
2.6 Related themes and issues		40
2.7 Notes on the literature		42
Exercises		48
		50
3 Confidence distributions		
3.1 Introduction		55
3.2 Confidence distributions and statistical inference		55
3.3 Graphical focus summaries		56
3.4 General likelihood-based recipes		65
3.5 Confidence distributions for the linear regression model		69
3.6 Contingency tables		72
3.7 Testing hypotheses via confidence for alternatives		78
3.8 Confidence for discrete parameters		80
		83

3.9	Notes on the literature	91
	Exercises	92
4	Further developments for confidence distribution	100
4.1	Introduction	100
4.2	Bounded parameters and bounded confidence	100
4.3	Random and mixed effects models	107
4.4	The Neyman–Scott problem	111
4.5	Multimodality	115
4.6	Ratio of two normal means	117
4.7	Hazard rate models	122
4.8	Confidence inference for Markov chains	128
4.9	Time series and models with dependence	133
4.10	Bivariate distributions and the average confidence density	138
4.11	Deviance intervals versus minimum length intervals	140
4.12	Notes on the literature	142
	Exercises	144
5	Invariance, sufficiency and optimality for confidence distributions	154
5.1	Confidence power	154
5.2	Invariance for confidence distributions	157
5.3	Loss and risk functions for confidence distributions	161
5.4	Sufficiency and risk for confidence distributions	165
5.5	Uniformly optimal confidence for exponential families	173
5.6	Optimality of component confidence distributions	177
5.7	Notes on the literature	179
	Exercises	180
6	The fiducial argument	185
6.1	The initial argument	185
6.2	The controversy	188
6.3	Paradoxes	191
6.4	Fiducial distributions and Bayesian posteriors	193
6.5	Coherence by restricting the range: Invariance or irrelevance?	194
6.6	Generalised fiducial inference	197
6.7	Further remarks	200
6.8	Notes on the literature	201
	Exercises	202
7	Improved approximations for confidence distributions	204
7.1	Introduction	204
7.2	From first-order to second-order approximations	205

7.3	Pivot tuning	208
7.4	Bartlett corrections for the deviance	210
7.5	Median-bias correction	214
7.6	The t-bootstrap and abc-bootstrap method	217
7.7	Saddlepoint approximations and the magic formula	219
7.8	Approximations to the gold standard in two test cases	222
7.9	Further remarks	227
7.10	Notes on the literature	228
	Exercises	229
8	Exponential families and generalised linear models	233
8.1	The exponential family	233
8.2	Applications	235
8.3	A bivariate Poisson model	241
8.4	Generalised linear models	246
8.5	Gamma regression models	249
8.6	Flexible exponential and generalised linear models	252
8.7	Strauss, Ising, Potts, Gibbs	256
8.8	Generalised linear-linear models	260
8.9	Notes on the literature	264
	Exercises	266
9	Confidence distributions in higher dimensions	274
9.1	Introduction	274
9.2	Normally distributed data	275
9.3	Confidence curves from deviance functions	278
9.4	Potential bias and the marginalisation paradox	279
9.5	Product confidence curves	280
9.6	Confidence bands for curves	284
9.7	Dependencies between confidence curves	291
9.8	Notes on the literature	292
	Exercises	292
10	Likelihoods and confidence likelihoods	295
10.1	Introduction	295
10.2	The normal conversion	298
10.3	Exact conversion	301
10.4	Likelihoods from prior distributions	302
10.5	Likelihoods from confidence intervals	305
10.6	Discussion	311
10.7	Notes on the literature	312
	Exercises	313

11	Confidence in non- and semiparametric models	317
11.1	Introduction	317
11.2	Confidence distributions for distribution functions	318
11.3	Confidence distributions for quantiles	318
11.4	Wilcoxon for location	324
11.5	Empirical likelihood	325
11.6	Notes on the literature	332
	Exercises	333
12	Predictions and confidence	336
12.1	Introduction	336
12.2	The next data point	337
12.3	Comparison with Bayesian prediction	343
12.4	Prediction in regression models	346
12.5	Time series and kriging	350
12.6	Spatial regression and prediction	353
12.7	Notes on the literature	356
	Exercises	356
13	Meta-analysis and combination of information	360
13.1	Introduction	360
13.2	Aspects of scientific reporting	363
13.3	Confidence distributions in basic meta-analysis	364
13.4	Meta-analysis for an ensemble of parameter estimates	371
13.5	Binomial count data	374
13.6	Direct combination of confidence distributions	375
13.7	Combining confidence likelihoods	376
13.8	Notes on the literature	379
	Exercises	380
14	Applications	383
14.1	Introduction	383
14.2	Golf putting	384
14.3	Bowheads	387
14.4	Sims and economic prewar development in the United States	389
14.5	Olympic unfairness	391
14.6	Norwegian income	396
14.7	Meta-analysis of two-by-two tables from clinical trials	401
14.8	Publish (and get cited) or perish	409
14.9	Notes on the literature	412
	Exercises	413

11	Confidence in non- and semiparametric models	317
11.1	Introduction	317
11.2	Confidence distributions for distribution functions	318
11.3	Confidence distributions for quantiles	318
11.4	Wilcoxon for location	324
11.5	Empirical likelihood	325
11.6	Notes on the literature	332
	Exercises	333
12	Predictions and confidence	336
12.1	Introduction	336
12.2	The next data point	337
12.3	Comparison with Bayesian prediction	343
12.4	Prediction in regression models	346
12.5	Time series and kriging	350
12.6	Spatial regression and prediction	353
12.7	Notes on the literature	356
	Exercises	356
13	Meta-analysis and combination of information	360
13.1	Introduction	360
13.2	Aspects of scientific reporting	363
13.3	Confidence distributions in basic meta-analysis	364
13.4	Meta-analysis for an ensemble of parameter estimates	371
13.5	Binomial count data	374
13.6	Direct combination of confidence distributions	375
13.7	Combining confidence likelihoods	376
13.8	Notes on the literature	379
	Exercises	380
14	Applications	383
14.1	Introduction	383
14.2	Golf putting	384
14.3	Bowheads	387
14.4	Sims and economic prewar development in the United States	389
14.5	Olympic unfairness	391
14.6	Norwegian income	396
14.7	Meta-analysis of two-by-two tables from clinical trials	401
14.8	Publish (and get cited) or perish	409
14.9	Notes on the literature	412
	Exercises	413

15	Finale: Summary, and a look into the future	418
15.1	A brief summary of the book	418
15.2	Theories of epistemic probability and evidential reasoning	423
15.3	Why the world need not be Bayesian after all	428
15.4	Unresolved issues	430
15.5	Finale	435
	<i>Overview of examples and data</i>	437
	<i>Appendix: Large-sample theory with applications</i>	447
A.1	<i>Convergence in probability</i>	447
A.2	<i>Convergence in distribution</i>	448
A.3	<i>Central limit theorems and the delta method</i>	449
A.4	<i>Minimisers of random convex functions</i>	452
A.5	<i>Likelihood inference outside model conditions</i>	454
A.6	<i>Robust parametric inference</i>	458
A.7	<i>Model selection</i>	462
A.8	<i>Notes on the literature</i>	464
	<i>Exercises</i>	464
	<i>References</i>	471
	<i>Name index</i>	489
	<i>Subject index</i>	495
