

CONTENTS

Foreword	xvi
Contributors	xviii
Preface	xx
1. The Impact of Biotechnology on Plant Agriculture	1
<i>Graham Brookes</i>	
1.0 Chapter Summary and Objectives	1
1.0.1 Summary	1
1.0.2 Discussion Questions	1
1.1 Introduction	1
1.2 Cultivation of Biotechnology (GM) Crops	2
1.3 Why Farmers Use Biotech Crops	4
1.4 GM's Effects on Crop Production and Farming	7
1.5 How the Adoption of Plant Biotechnology has Impacted the Environment	8
1.5.1 Environmental Impacts from Changes in Insecticide and Herbicide Use	8
1.5.2 Impact on GHG Emissions	11
1.6 Conclusions	13
Life Box 1.1 Norman E. Borlaug	14
Life Box 1.2 Mary-Dell Chilton	15
Life Box 1.3 Robert T. Fraley	17
References	19
2. Mendelian Genetics and Plant Reproduction	20
<i>Matthew D. Halfhill and Suzanne I. Warwick</i>	
2.0 Chapter Summary and Objectives	20
2.0.1 Summary	20
2.0.2 Discussion Questions	20
2.1 Overview of Genetics	20
2.2 Mendelian Genetics	23
2.2.1 Law of Segregation	26
2.2.2 Law of Independent Assortment	26
2.3 Mitosis and Meiosis	27
2.3.1 Mitosis	29
2.3.2 Meiosis	29
2.3.3 Recombination	30
2.3.4 Cytogenetic Analysis	31
2.3.5 Mendelian Genetics and Biotechnology Summary	32
2.4 Plant Reproductive Biology	32
2.4.1 History of Research in Plant Reproduction	32
2.4.2 Mating Systems	32
2.4.3 Hybridization and Polyploidy	36
2.4.4 Mating Systems and Biotechnology Summary	38
2.5 Conclusion	38

Life Box 2.1	Richard A. Dixon	39
Life Box 2.2	Michael L. Arnold	40
References		42
3. Plant Breeding		43
	<i>Nicholas A. Tinker and Elroy R. Cober</i>	
3.0	Chapter Summary and Objectives	43
3.0.1	Summary	43
3.0.2	Discussion Questions	43
3.1	Introduction	44
3.2	Central Concepts in Plant Breeding	45
3.2.1	Simple vs. Complex Inheritance	45
3.2.2	Phenotype vs. Genotype	46
3.2.3	Mating Systems, Varieties, Landraces, and Pure Lines	47
3.2.4	Other Topics in Population and Quantitative Genetics	49
3.2.5	The Value of a Plant Variety Depends on Many Traits	51
3.2.6	A Plant Variety Must Be Environmentally Adapted	51
3.2.7	Plant Breeding is a Numbers Game	52
3.2.8	Plant Breeding is an Iterative and Collaborative Process	52
3.2.9	Diversity, Adaptation, and Ideotypes	53
3.2.10	Other Considerations	56
3.3	Objectives in Plant Breeding	56
3.4	Methods of Plant Breeding	57
3.4.1	Methods of Hybridization	58
3.4.2	Self-Pollinated Species	58
3.4.3	Outcrossing Species	63
3.4.4	Clonally Propagated Species	67
3.5	Breeding Enhancements	68
3.5.1	Doubled Haploidy	68
3.5.2	Marker-Assisted Selection	68
3.5.3	Mutation Breeding	70
3.5.4	Apomixis	71
3.6	Conclusions	71
Life Box 3.1	Gurdev Singh Khush	72
Life Box 3.2	P. Stephen Baenziger	74
Life Box 3.3	Steven D. Tanksley	75
References		77
4. Plant Development and Physiology		78
	<i>Glenda E. Gillaspay</i>	
4.0	Chapter Summary and Objectives	78
4.0.1	Summary	78
4.0.2	Discussion Questions	78
4.1	Plant Anatomy and Morphology	79
4.2	Embryogenesis and Seed Germination	80
4.2.1	Gametogenesis	80
4.2.2	Fertilization	82
4.2.3	Fruit Development	83
4.2.4	Embryogenesis	83
4.2.5	Seed Germination	85
4.2.6	Photomorphogenesis	85
4.3	Meristems	86
4.3.1	Shoot Apical Meristem	86

4.3.2	Root Apical Meristem and Root Development	88
4.4	Leaf Development	89
4.4.1	Leaf Structure	89
4.4.2	Leaf Development Patterns	91
4.5	Flower Development	92
4.5.1	Floral Evocation	92
4.5.2	Floral Organ Identity and the ABC Model	93
4.6	Hormone Physiology and Signal Transduction	94
4.6.1	Seven Plant Hormones and Their Actions	94
4.6.2	Plant Hormone Signal Transduction	96
4.7	Conclusions	100
Life Box 4.1	Deborah Delmer	100
Life Box 4.2	Natasha Raikhel	102
Life Box 4.3	Brenda S.J. Winkel	103
	References	105
5.	Tissue Culture: The Manipulation of Plant Development	107
	<i>Vinitha Cardoza</i>	
5.0	Chapter Summary and Objectives	107
5.0.1	Summary	107
5.0.2	Discussion Questions	107
5.1	Introduction	107
5.2	History of Tissue Culture	108
5.3	Media and Culture Conditions	109
5.3.1	Basal Media	109
5.3.2	Growth Regulators	110
5.4	Sterile Technique	111
5.4.1	Clean Equipment	111
5.4.2	Surface Sterilization of Explants	112
5.5	Culture Conditions and Vessels	113
5.6	Culture Types and Their Uses	113
5.6.1	Callus and Somatic Embryo Culture	113
5.6.2	Cell Suspension Cultures	117
5.6.3	Anther/Microspore Culture	119
5.6.4	Protoplast Culture	119
5.6.5	Somatic Hybridization	120
5.6.6	Embryo Culture	120
5.6.7	Meristem Culture	121
5.7	Regeneration Methods of Plants in Culture	121
5.7.1	Organogenesis	121
5.7.2	Somatic Embryogenesis	123
5.7.3	Synthetic Seeds	123
5.8	Rooting of Shoots	123
5.9	Acclimation	124
5.10	Problems that can Occur in Tissue Culture	124
5.10.1	Culture Contamination	124
5.10.2	Hyperhydricity	124
5.10.3	Browning of Explants	124
5.11	Conclusions	125
	Acknowledgments	125
Life Box 5.1	Glenn Burton Collins	125
Life Box 5.2	Martha S. Wright	127
Life Box 5.3	Vinitha Cardoza	128
	References	129

6. Molecular Genetics of Gene Expression	133
<i>Maria Gallo and Alison K. Flynn</i>	
6.0 Chapter Summary and Objectives	133
6.0.1 Summary	133
6.0.2 Discussion Questions	133
6.1 The Gene	133
6.1.1 DNA Coding for a Protein via the Gene	133
6.1.2 DNA as a Polynucleotide	134
6.2 DNA Packaging into Eukaryotic Chromosomes	134
6.3 Transcription	135
6.3.1 Transcription of DNA to Produce Messenger Ribonucleic Acid	135
6.3.2 Transcription Factors	140
6.3.3 Coordinated Regulation of Gene Expression	140
6.3.4 Chromatin as an Important Regulator of Transcription	141
6.3.5 Regulation of Gene Expression by DNA Methylation	142
6.3.6 RNA-Directed Gene Silencing by Small RNAs	143
6.3.7 Processing to Produce Mature mRNA	143
6.4 Translation	144
6.4.1 Initiation of Translation	147
6.4.2 Elongation Phase of Translation	147
6.4.3 Translation Termination	147
6.5 Protein Postranslational Modification	147
Life Box 6.1 Maarten Chrispeels	150
Life Box 6.2 David W. Ow	152
References	154
7. Plant Systems Biology	155
<i>Wusheng Liu and C. Neal Stewart, Jr.</i>	
7.0 Chapter Summary and Objectives	155
7.0.1 Summary	155
7.0.2 Discussion Questions	155
7.1 Introduction	155
7.2 Defining Plant Systems Biology	157
7.3 Properties of Plant Systems	158
7.4 A Framework of Plant Systems Biology	159
7.4.1 Comprehensive Quantitative Data Sets	160
7.4.2 Network Analysis	161
7.4.3 Dynamic Modeling	161
7.4.4 Exploring Systems and Models Toward Refinement	161
7.5 Disciplines and Enabling Tools of Plant Systems Biology	162
7.5.1 Plant Genomics	162
7.5.2 Plant Transcriptomics	166
7.5.3 Plant Proteomics	168
7.5.4 Plant Metabolomics	170
7.5.5 Bioinformatics	172
7.6 Conclusions	176
Life Box 7.1 C. Robin Buell	177
Life Box 7.2 Zhenbiao Yang	178
References	179
8. Recombinant DNA, Vector Design, and Construction	181
<i>Mark D. Curtis and David G.J. Mann</i>	
8.0 Chapter Summary and Objectives	181
8.0.1 Summary	181
8.0.2 Discussion Questions	181

8.1	DNA Modification	181
8.2	DNA Vectors	186
8.2.1	DNA Vectors for Plant Transformation	188
8.2.2	Components for Efficient Gene Expression in Plants	190
8.3	Greater Demands Lead to Innovation	192
8.3.1	“Modern” Cloning Strategies	192
8.4	Vector Design	197
8.4.1	Vectors for High-Throughput Functional Analysis	197
8.4.2	Vectors for Gene Down-Regulation Using RNA Interference (RNAi)	199
8.4.3	Expression Vectors	199
8.4.4	Vectors for Promoter Analysis	200
8.4.5	Vectors Derived from Plant Sequences	201
8.4.6	Vectors for Multigenic Traits	203
8.5	Targeted Transgene Insertions	204
8.6	Prospects	205
	Life Box 8.1 Wayne Parrott	206
	Life Box 8.2 David Mann	207
	References	208
9.	Genes and Traits of Interest	211
	<i>Kenneth L. Korth</i>	
9.0	Chapter Summary and Objectives	211
9.0.1	Summary	211
9.0.2	Discussion Questions	211
9.1	Introduction	212
9.2	Identifying Genes of Interest via Genomics and other Omics Technologies	212
9.3	Traits for Improved Crop Production Using Transgenics	214
9.3.1	Herbicide Resistance	215
9.3.2	Insect Resistance	218
9.3.3	Pathogen Resistance	220
9.3.4	Traits for Improved Products and Food Quality	222
9.4	Conclusion	227
	Life Box 9.1 Dennis Gonsalves	227
	Life Box 9.2 Ingo Potrykus	229
	References	231
10.	Promoters and Marker Genes	233
	<i>Wusheng Liu, Brian Miki and C. Neal Stewart, Jr.</i>	
10.0	Chapter Summary and Objectives	233
10.0.1	Summary	233
10.0.2	Discussion Questions	233
10.1	Introduction	234
10.2	Promoters	234
10.2.1	Constitutive Promoters	235
10.2.2	Tissue-Specific Promoters	236
10.2.3	Inducible Promoters	237
10.2.4	Synthetic Promoters	239
10.3	Marker Genes	239
10.3.1	Selectable Marker Genes	242
10.3.2	Reporter Genes	246
10.4	Marker-Free Strategies	250
10.5	Conclusions	254
	Life Box 10.1 Fredy Altpeter	255
	Life Box 10.2 Taniya Dhillon	257
	References	259

11. Transgenic Plant Production	262
<i>John J. Finer</i>	
11.0 Chapter Summary and Objectives	262
11.0.1 Summary	262
11.0.2 Discussion Questions	262
11.1 Overview of Plant Transformation	263
11.1.1 Introduction	263
11.1.2 Basic Components for Successful Gene Transfer to Plant Cells	263
11.2 <i>Agrobacterium Tumefaciens</i>	265
11.2.1 History of <i>Agrobacterium</i> Research	266
11.2.2 Use of the T-DNA Transfer Process for Transformation	268
11.2.3 Optimizing Delivery and Broadening the Taxonomical Range of Targets	269
11.2.4 Strain and Cultivar Compatibility	270
11.2.5 Agroinfiltration	271
11.2.6 <i>Arabidopsis</i> Floral Dip (Clough and Bent 1998)	271
11.3 Particle Bombardment	272
11.3.1 History of Particle Bombardment	272
11.3.2 The Fate of the Introduced DNA into Plant Cells	274
11.3.3 The Power and Problems of Direct DNA Introduction	275
11.3.4 Improvements in the Control of Transgene Expression	276
11.4 Other Methods of Transformation	276
11.4.1 The Need for Additional Technologies	276
11.4.2 Protoplasts	277
11.4.3 Whole Tissue Electroporation	278
11.4.4 Silicon Carbide Whiskers	278
11.4.5 Viral Vectors	278
11.4.6 Laser Micropuncture	279
11.4.7 Nanofiber Arrays	279
11.5 The Rush to Publish	280
11.5.1 Controversial Reports of Plant Transformation	280
11.5.2 Criteria to Consider in Judging Novel Plant Transformation Methods	284
11.6 A Look to the Future	286
Life Box 11.1 Ted Klein	286
Life Box 11.2 John Finer	287
Life Box 11.3 Kan Wang	289
References	291
12. Analysis of Transgenic Plants	293
<i>C. Neal Stewart, Jr.</i>	
12.0 Chapter Summary and Objectives	293
12.0.1 Summary	293
12.0.2 Discussion Questions	293
12.1 Essential Elements of Transgenic Plant Analysis	293
12.2 Assays for Transgenicity, Insert Copy Number, and Segregation	295
12.2.1 Polymerase Chain Reaction	295
12.2.2 Quantitative PCR	295
12.2.3 Southern (DNA) Blot Analysis	296
12.2.4 Segregation Analysis of Progeny	300
12.3 Transgene Expression	301
12.3.1 Transcript Abundance	301
12.3.2 Protein Abundance	302
12.4 Knockdown or Knockout Analysis Rather than Overexpression Analysis	304
12.5 The Relationship Between Molecular Analyses and Phenotype	305

Life Box 12.1	Hong S. Moon	305
Life Box 12.2	Neal Stewart	306
Life Box 12.3	Nancy A. Reichert	308

<i>Alan McHughen</i>		
13.0	Chapter Summary and Objectives	311
13.0.1	Summary	311
13.0.2	Discussion Questions	311
13.1	Introduction	311
13.2	History of Genetic Engineering and Its Regulation	313
13.3	Regulation of GM Plants	315
13.3.1	New Technologies	316
13.3.2	US Regulatory Agencies and Regulations	317
13.3.3	European Union	319
13.3.4	Canada	321
13.3.5	International Perspectives	321
13.4	Regulatory Flaws and Invalid Assumptions	323
13.4.1	Conventional Plant Breeding has Higher Safety than Biotechnology-Derived GM	324
13.4.2	GMOs Should Be Regulated Because They're GMOs and Un-natural	324
13.4.3	Even though Product Risk is Important, It is Reasonable that Process (GMO) Should Trigger Regulation	324
13.4.4	Since GM Technology is New, It Might Be Hazardous and Should Be Regulated	325
13.4.5	If We Have a Valid Scientific Test, Then It Should Be Used in Regulations	326
13.4.6	Better Safe than Sorry: Overregulation is Better than Underregulation	326
13.5	Conclusion	327
Life Box 13.1	Alan McHughen	328
Life Box 13.2	Raymond D. Shillito	329

<i>Detlef Bartsch, Achim Gathmann, Christiane Saeglitz and Arti Sinha</i>		
14.0	Chapter Summary and Objectives	333
14.0.1	Summary	333
14.0.2	Discussion Questions	333
14.1	Introduction	334
14.2	Environmental Risk Assessment Process	334
14.2.1	Initial Evaluation (Era Step 1)	334
14.2.2	Problem Formulation (ERA Step 2)	335
14.2.3	Controlled Experiments and Gathering of Information (ERA Step 3)	335
14.2.4	Risk Evaluation (ERA Step 4)	335
14.2.5	Progression through a Tiered Risk Assessment	335
14.3	An Example Risk Assessment: The Case of Bt Maize	336
14.3.1	Effect of Bt Maize Pollen on Nontarget Caterpillars	337
14.3.2	Statistical Analysis and Relevance for Predicting Potential Adverse Effects on Butterflies	339
14.4	Proof of Safety Versus Proof of Hazard	340
14.5	Modeling the Risk Effects on a Greater Scale	340
14.6	Proof of Benefits: Agronomic Performance	341
14.7	Conclusions	342
Life Box 14.1	Tony Shelton	343
Life Box 14.2	Detlef Bartsch	344

15. Intellectual Property in Agricultural Biotechnology: Strategies for Open Access	347
<i>Monica Alandete-Saez, Cecilia Chi-Ham, Gregory Graff, Sara Boettiger and Alan B. Bennett</i>	
15.0 Chapter Summary and Objectives	347
15.0.1 Summary	347
15.0.2 Discussion Questions	347
15.1 Intellectual Property and Agricultural Biotechnology	348
15.1.1 What is Intellectual Property?	349
15.1.2 What is a Patent?	349
15.2 The Relationship Between Intellectual Property and Agricultural Research	351
15.3 Patenting Plant Biotechnology: Has an Anti-Commons Developed?	352
15.3.1 Transformation Methods	352
15.3.2 Selectable Markers	353
15.3.3 Promoters	354
15.3.4 Subcellular Localization	354
15.3.5 The Importance of Combining IP-Protected Components in Transgenic Crops	355
15.4 What is Freedom to Operate (FTO)?	355
15.4.1 The Importance of FTO	355
15.4.2 FTO Case Study: the Tomato E8 Promoter	356
15.5 Strategies for Open Access	358
15.6 Conclusions	359

<i>Wusheng Liu and C. Neal Stewart, Jr.</i>	
17.0 Chapter Summary and Objectives	383
17.0.1 Summary	383
17.0.2 Discussion Questions	383

17.1 Introduction: The Birth of Synthetic Biology	384
17.2 Defining Synthetic Biology for Plants	385
17.2.1 Design Cycles of Synthetic Biology	385
17.2.2 Foundations of Synthetic Biology	387
17.2.3 Components of Plant Synthetic Biology	388
17.3 Enabling Tools for Plant Synthetic Biology	389
17.3.1 Computer-Aided Design	389
17.3.2 Synthetic Promoters	389
17.3.3 Precise Genome Editing	389
17.4 Synthetic Biology Applications in Plants	393
17.4.1 Synthetic Inducible Promoters	394
17.4.2 A Device for Monitoring Auxin-Induced Plant IAA Degradation in Yeast	395
17.4.3 Circuits for Phytosensing of Explosives or Bacterial Pathogens in Transgenic Plants	395
17.5 Conclusions	397
