Preface			XV	
1	Intro	oduction	: Generalized Model of Advanced Wireless Networks	1
	1.1	Networ	rk Model	
		1.1.1	Node Percolation	3
		1.1.2	Link Percolation—Cognitive Links	4
	1.2	Networ	rk Connectivity	5
	1.3	Wireles	ss Network Design with Small World Properties	7
		1.3.1	Cell Rewiring	7
		1.3.2	Traffic Distribution Aware Rewiring	9
		1.3.3	Multicell Rewiring	10
	1.4	Freque	ncy Channels Backup	11
		1.4.1	m/k _f /s Contract	11
		1.4.2	Random Redundancy Assignment (R ² A)	11
		1.4.3	On Demand Redundancy Assignment	12
	1.5	Genera	lized Network Model	13
	1.6	Routing	g Protocols Over s-Lattice Network	14
		1.6.1	Application Specific Routing Protocol	16
	1.7	Networ	rk Performance	16
		1.7.1	Average Path Length	18
		1.7.2		18
	1.8	Node, I	Route, Topology, and Network Robustness	19
	1.9	Power	Consumption	20
	1.10	Protoco	ol Complexity	20
	1.11	Perform	nance Evaluation	21
		1.11.1	Average Path Length	21
		1.11.2	Clustering	23
		1.11.3	Node Robustness	23
		1.11.4	Network Robustness	23

		1.11.5	Power Consumption	24			
		1.11.6	Protocol Complexity	25			
	1.12	Book La	yout	27			
		1.12.1	Chapter 1: Introduction: Generalized Model of Advanced				
			Wireless Networks	28			
		1.12.2	Chapter 2: Adaptive Network Layer	28			
		1.12.3	Chapter 3: Mobility Management	28			
		1.12.4	Chapter 4: Ad Hoc Networks	28			
		1.12.5	Chapter 5: Sensor Networks	28			
		1,12.6	Chapter 6: Security	29			
		1,12.7	Chapter 7: Networks Economy	29			
		1,12.8	Chapter 8: Multi-Hop Cellular Networks	29			
		1.12.9	Chapter 9: Cognitive Networks	29			
		1.12.10	Chapter 10: Stochastic Geometry	29			
		1.12.11	Chapter 11: Heterogeneous Networks	30			
		1.12.12	Chapter 12: Access Point Selection	30			
		1.12.13	Chapter 13: Self-Organizing Networks	30			
		1.12.14	Chapter 14: Complex Networks	30			
		1.12.15	Chapter 15: Massive MIMO	30			
		1.12.16	Chapter 16: Network Optimization Theory	31			
		1.12.17	Chapter 17: Network Information Theory	31			
		1.12.18	Chapter 18: Network Stability	31			
		1.12.19	Chapter 19: Multi-Operator Spectrum Sharing	31			
		1.12.20	Chapter 20: Large Scale Networks and Mean Field Theory	31			
		1.12.21	Chapter 21: mmWave 3D Networks	32			
		1.12.22	Chapter 22: Cloud Computing in Wireless Network	32			
		1.12.23	Chapter 23: Wireless Networks and Matching Theory	32			
		1.12.24	Chapter 24: Dynamic Wireless Network Infrastructure	33			
		ndix A.1		33			
	Refer	ences		34			
2	Adap	otive Netw	vork Layer	35			
	2.1	Graphs a	and Routing Protocols	35			
	2.2	Graph T	heory	54			
	2.3	Routing	with Topology Aggregation	56			
		2.3.1	Network and Aggregation Models	58			
	Refer	rences		60			
3	Mob	ility Mana	agement	65			
	3.1		Networks	65			
		3.1.1	Mobility Management in Cellular Networks	67			
		3.1.2	Location Registration and Call Delivery	71			
		3.1.3	Location Update and Terminal Paging	74			
		3.1.4	WATM Handoff Management in 4G Wireless Networks	88			
		3.1.5	Mobility Management for Satellite Networks	89			

	3.2	Cellular Systems with Prioritized Handoff	89
		3.2.1 Performance Examples	99
	3.3	Cell Residing Time Distribution	100
	3.4	Mobility Prediction in Pico- and Micro-Cellular Networks	105
		3.4.1 PST-QoS Guarantees Framework	107
		3.4.2 Most Likely Cluster Model	108
	App	endix A.3 Distance Calculation in an Intermediate Cell	116
	Refe	rences	122
4	Ad l	Hoc Networks	126
	4.1	Routing Protocols	126
		4.1.1 Ad Hoc Routing Protocols	127
		4.1.2 Reactive Protocols	134
	4.2	Hybrid Routing Protocol	146
	4.3	Scalable Routing Strategies	152
	4.4	Multipath Routing	160
	4.5	Clustering Protocols	162
		4.5.1 Introduction	162
		4.5.2 Clustering Algorithm	164
	4.6	Cashing Schemes for Routing	175
	4.7	Distributed QoS Routing	181
		4.7.1 Forwarding the Received Tokens	185
		4.7.2 Bandwidth Constrained Routing	186
		4.7.3 Forwarding the Received Tokens	187
	Refe	rences	190
5	Sens	or Networks	194
	5.1	Introduction	194
	5.2	Sensor Network Parameters	196
	5.3	Sensor Network Architecture	199
		5.3.1 Physical Layer	199
		5.3.2 Data Link Layer	200
		5.3.3 Network Layer	202
		5.3.4 Transport Layer	207
		5.3.5 Application Layer	208
	5.4	Mobile Sensor Network Deployment	209
	5.5	Directed Diffusion	212
	5.6	Aggregation in Wireless Sensor Networks	216
	5.7	Boundary Estimation	220
		5.7.1 Number of RDPs in \mathcal{P}	222
		5.7.2 Kraft Inequality	222
		5.7.3 Upper Bounds on Achievable Accuracy	223
		5.7.4 System Optimization	224
	5.8	Optimal Transmission Radius in Sensor Networks	227
	5.9	Data Funneling	233
	5.10	Equivalent Transport Control Protocol in Sensor Networks	236
	Refer	ences	237

6	Sec	urity		244			
	6.1	Authen	tication	244			
		6.1.1	Attacks on Simple Cryptographic Authentication	247			
		6.1.2	Canonical Authentication Protocol	250			
	6.2	Security	y Architecture	253			
	6.3	Key Ma	anagement	257			
	6.4	Security	in Ad Hoc Networks	261			
		6.4.1	Self-Organized Key Management	265			
	6.5	Security	in Sensor Networks	268			
	Refe	erences		269			
7	Network Economics						
	7.1	Fundam	nentals of Network Economics	272			
		7.1.1	Externalities	273			
		7.1.2	Pricing of Services	274			
		7.1.3	Congestion Pricing	275			
		7.1.4	Congestion Game	276			
		7.1.5	Modeling Service Differentiation	277			
		7.1.6	Competition	278			
		7.1.7	Auctions	279			
		7.1.8	Bidding for QoS	280			
		7.1.9	Bandwidth Auction	281			
		7.1.10	Investments	282			
	7.2	Wireles	s Network Microeconomics: Data Sponsoring	286			
		7.2.1	Background Solutions	287			
		7.2.2	Sponsored Data Model	287			
	7.3	Spectru	m Pricing for Market Equilibrium	291			
		7.3.1	Network and Pricing Model	291			
		7.3.2	Optimization of Spectrum Pricing	292			
		7.3.3	Distributed Solutions	295			
		7.3.4	Stability of Distributed Pricing Models	297			
	7.4	Sequent	tial Spectrum Sharing	300			
		7.4.1	Sequential Spectrum Sharing and Interrelated Market Model	301			
		7.4.2	Iterative Negotiation Algorithms	304			
	7.5	Data Pla	an Trading	308			
		7.5.1	Modeling User's Buyer/Seller Trading Incentives	309			
		7.5.2	ISP Trading Policies	313			
	Refe	erences		315			
8	Mu	lti-Hop (Cellular Networks	318			
	8.1	Modeli	ng Multi-Hop Multi-Operator Multi-Technology Wireless Networks	318			
	8.2	Techno	logy Background	319			
	8.3		Model and Notation	321			
	8.4		te Discovery Protocols	323			
		8.4.1	Minimum Distance Routing	323			
		8.4.2	Limited Interference Routing/Scheduling	324			

	8.5	Perfor	mance of m ³ Route Discovery Protocols	327
	8.6	Protoc	ol Complexity	329
	8.7	Traffic	c Offloading Incentives	330
		8.7.1	Collaborative Negotiation between MNO and SSO	335
	8.8	Perform	mance Illustrations	335
		8.8. <i>1</i>	m ³ Route Discovery Protocols	336
		8.8.2	Capacity and Throughput for the Modified m ³ Route	
			Discovery Protocols	338
		8.8. <i>3</i>	Traffic Offloading Incentives	341
		8.8.4	Implementation and Impact of Mobility	343
	Refe	rences		344
9	Cogi	uitive Ne	etworks	346
	9.1		ology Background	346
		9.1.1	Fundamentals	346
		9.1.2	Network and Transport Layer Protocols	348
	9.2		um Auctions for Multi-hop Cognitive Networks	350
		9.2.1	Background Technology	352
		9.2.2	System Model	353
		9.2.3	Heuristic Truthful Auction	356
		9.2.4	Randomized Auction	359
	9.3		ound Auctioning in Multi-hop Cognitive Cellular Networks	363
		9.3.1	Network Model	364
		9.3.2	Spectrum Aware Routing Discovery Protocol	367
		9.3.3	Joint Resource Auction and Tipping Scheme	370
		9.3.4	Reinforcement Learning Based Auction Scheme	372
		9.3.5	Group Buying Based Auction Design	373
		9.3.6	Further Extension to General Scenarios	377
		9.3.7	System Performance	378
	Refer	rences		388
10	Stock	astic G	eometry	391
	10.1		round Theory	391
