Contents

1 **Maps and Discrete Surfaces** 1
1.1 Gluing Polygons 2
1.1.1 Intuitive Definition 2
1.1.2 Formal Definition 6
1.1.3 Topology 9
1.1.4 Symmetry Factor 10
1.2 Generating Functions for Counting Maps 12
1.2.1 Maps with Fixed Number of Vertices 13
1.2.2 Fixed Boundary Lengths 15
1.2.3 Redundancy of the Parameters 18
1.2.4 All Genus 19
1.2.5 Non Connected Maps 20
1.2.6 Rooted Maps: One Boundary 21
1.3 Tutte's Equations 21
1.3.1 Planar Case: The Disk 21
1.3.2 Higher Genus Tutte Equations 22
1.4 Exercises 24

2 **Formal Matrix Integrals** 25
2.1 Definition of a Formal Matrix Integral 25
2.1.1 Introductory Example: 1-Matrix Model and Quartic Potential 25
2.1.2 Comparison with Convergent Integrals 27
2.1.3 Formal Integrals, General Case 27
2.2 Wick's Theorem and Combinatorics 30
2.2.1 Generalities About Wick's Theorem 30
2.2.2 Matrix Gaussian Integrals 32
2.3 Generating Functions of Maps and Matrix Integrals 37
2.3.1 Generating Functions for Closed Maps 37

Eynard, Bertrand (DE-588)1104384981
Counting surfaces

Schweizerischen Nationalbibliothek

2.4 Maps with Boundaries or Marked Faces 38
2.4.1 One Boundary 38
2.4.2 Several Boundaries 39
2.4.3 Topological Expansion for Bounded Maps of Given Genus 40
2.4.4 Resolvents 41
2.5 Loop Equations = Tutte Equations 41
2.6 Loop Equations and "Virasoro Constraints" 44
2.6.1 Virasoro-Witt Generators 46
2.6.2 Generating Series of Virasoro-Witt Generators 46
2.6.3 Maps and Virasoro Constraints 47
2.7 Summary Maps and Matrix Integrals 48
2.8 Exercises 50

3 Solution of Tutte-Loop Equations 53
3.1 Disk Amplitude 54
3.1.1 Solving Tutte's Equation 54
3.1.2 A Useful Lemma 55
3.1.3 1-Cut Solution, Zhukovsky's Variable 58
3.1.4 Even–Bipartite Maps 65
3.1.5 Generating Functions of Disks of Fixed Perimeter 68
3.1.6 Derivatives of the Disk Amplitude 69
3.1.7 Example: Planar Rooted Quadrangulations 72
3.1.8 Example: Planar Rooted Triangulations 75
3.1.9 Example: Gaussian Matrix Integral, Catalan Numbers 79
3.2 Cylinders/Annulus Amplitude 81
3.2.1 Universality and Fundamental Second Kind Kernel 83
3.2.2 Cylinders of Fixed Perimeter Lengths 84
3.3 Higher Topology and Topological Recursion 86
3.3.1 Preliminary Results: Analytical Properties 86
3.3.2 The Topological Recursion 91
3.3.3 Topological Recursion for $W_k^{(g)}$'s, and the Method of Moments 93
3.3.4 Examples of Maps of Higher Topology 96
3.4 Closed Surfaces 103
3.4.1 General Considerations 103
3.4.2 The Generating Function of Stable Maps of Genus ≥ 2 107
3.4.3 Planar Maps 110
3.4.4 Genus 1 Maps 114
3.4.5 Derivatives of F_g's 118
3.4.6 Summary Closed Maps 119
3.5 Structure Properties 120
3.5.1 Singularities 126
3.5.2 Examples 126

3.6 Examples of Higher Topologies Computations 129
3.6.1 Quadrangulations 129
3.7 Summary, Generating Functions of Maps 135
3.8 Exercises 142

4 Multicut Case 145
4.1 Formal Integrals and Extrema of V 146
4.1.1 A Digression on Convergent Normal Matrix Integrals 147
4.1.2 Definition of Formal Cubic Integrals 149
4.1.3 General Definition of Formal Multicut Integrals 150
4.2 What Are Multicut Formal Integrals Counting? 152
4.2.1 Discrete Surfaces Made of Di-polygons 153
4.2.2 Formal Multicut Matrix Integrals and Nodal Surfaces 155
4.3 Solution of Loop Equations 155
4.3.1 Multicut Lemma and Cycle Integrals 155
4.3.2 Disc Generating Function 159
4.3.3 Higher Genus Algebraic Equations 160
4.3.4 Geometry of the Spectral Curve 161
4.3.5 Cylinder Generating Function 164
4.3.6 Higher Topologies 164
4.4 Maps Without Boundaries 166
4.5 Exercises 167

5 Counting Large Maps 169
5.1 Introduction to Large Maps and Double Scaling Limit 170
5.1.1 Large Size Asymptotics and Singularities 170
5.1.2 Example: Quadrangulations 171
5.1.3 About Double Scaling Limits and Liouville Quantum Gravity 173
5.2 Critical Spectral Curve 175
5.2.1 Spectral Curves with Cusps 175
5.2.2 Multicritical Points 178
5.3 Computation of the Asymptotic $W_n^{(g)}$'s 182
5.3.1 Double Scaling Limit of F_g 185
5.3.2 Critical Exponents and KPZ 187
5.3.3 Example: Triangulations and Pure Gravity 191
5.4 Minimal Models 195
5.4.1 Introduction to Minimal Models 195
5.4.2 String Equation 196
5.4.3 Lax Pair 198
5.4.4 Lax Equation 199
5.4.5 The Linear ψ System 200
5.4.6 Kernel and Correlators 201
5.4.7 Example: (1,2) Minimal Model, the Airy Kernel 211
5.4.8 Tau Function 214
5.4.9 Large N Limit 217

5.4.10 Topological Expansion 218
5.4.11 WKB Expansion 222
5.4.12 Link with Symplectic Invariants 227
5.4.13 Tau Function 229
5.4.14 Large N and Large s 230
5.4.15 Example: Pure Gravity Case 233
5.5 Summary: Large Maps and Liouville Gravity 234
5.6 Exercises 235

6 Counting Riemann Surfaces 237
6.1 Moduli Spaces of Riemann Surfaces 237
6.1.1 Examples of Moduli Spaces 238
6.1.2 Stability and Unstability 242
6.1.3 Compactification 244
6.2 Informal Introduction to Intersection Numbers 249
6.2.1 Informal Introduction to Chern Classes 250
6.2.2 Intersection Numbers of Cotangent Bundles 252
6.3 Parametrizing Surfaces 254
6.3.1 Teichmüller Hyperbolic Foliation 254
6.3.2 Strebel Foliation 258
6.3.3 Chern Classes 262
6.3.4 Computing Intersection Numbers 265
6.3.5 Generating Function for Intersection Numbers 267
6.3.6 Generating Function and Kontsevich Integral 270
6.3.7 Generating Functions with Marked Points 276
6.4 Combinatorics of Graphs and Recursions 289
6.4.1 Edge Removal and Tutte's Equations 292
6.4.2 Disc Amplitude (Rooted Planar Strebel Graphs) 295
6.4.3 Cylinder Amplitude 297
6.4.4 The Pair of Pants (0,3) 299
6.4.5 The Lid (1,1) 300
6.4.6 Stable Topologies 302
6.4.7 Topological Recursion for Intersection Numbers 309
6.4.8 Examples 310
6.4.9 Computation of $F_g = \omega_{g,0}$ 312
6.5 Large Maps, Liouville Gravity and Topological Gravity 322
6.6 Weil-Petersson Volumes 323
6.7 Summary: Riemann Surfaces and Topological Gravity 326
6.8 Exercises 331

7 Topological Recursion and Symplectic Invariants 335
7.1 Symplectic Invariants of Spectral Curves 335
7.1.1 Spectral Curves 335
7.1.2 Geometry of the Spectral Curve 338
7.2 Main Properties 345

7.3 Deformations of Symplectic Invariants 347
7.3.1 Spectral Curve Deformation 347
7.3.2 Form-Cycle Duality 349
7.3.3 Variation of $\omega_n^{(g)}$ 353
7.4 Diagrammatic Representation 356
7.4.1 Graphs 356
7.4.2 Example of $\mathcal{G}_1^{(2)}(p)$ 357
7.4.3 Weight of a Graph 358
7.4.4 Examples 360
7.4.5 Remark: Pants Gluings 363
7.5 Exercises 363

8 Ising Model 365
8.1 Bicolored Maps 366
8.1.1 Reformulation 368
8.2 Tutte-Like Equations 371
8.2.1 Equation for Generating Functions 375
8.3 Solution of Loop Equations 376
8.3.1 The Disc: Spectral Curve 376
8.3.2 Example: Ising Model on Quadrangulations 380
8.3.3 All Topologies Generating Functions 381
8.4 Mixed Boundary Conditions 381
8.4.1 Maps with Mixed Boundaries 382
8.4.2 Planar Discs 397
8.5 Summary: Ising Model 404
8.6 Exercises 406
