

TABLE DES MATIÈRES

Résumés des articles	ix
Abstracts	xiii
Préface	xvii
 K. BUZZARD — <i>Questions about slopes of modular forms</i>	 1
Introduction	1
1. $\Gamma_0(N)$ -regularity	5
2. The conjecture	7
3. Remarks on the conjecture	10
4. Consequences of the conjecture and related questions	11
References	14
 M. HARRIS — <i>The Local Langlands correspondence: Notes of (half) a course at the IHP Spring 2000</i>	 17
Introduction	18
1. Galois representations attached to automorphic representations of $GL(n)$..	24
2. Shimura varieties as moduli varieties	35
3. p -divisible \mathcal{O} -modules and Drinfel'd bases	46
4. Stratification and vanishing cycles	58
5. Construction of a local correspondence	74
6. The second basic identity and Isogeny classes in the special fiber	92
7. Comparison of trace formulas	108
8. Strata in Shimura varieties of PEL type	125
Appendices	137
References	142
 H. HIDA — <i>p-Adic automorphic forms on reductive groups</i>	 147
1. Introduction	148
2. Elliptic Curves	155
3. Vertical Control for Elliptic Modular Forms	166

4. Hecke Equivariance of the Eichler-Shimura Map	170
5. Moduli of Abelian Schemes	182
6. Shimura Varieties	197
7. Formal Theory of Automorphic Forms	207
8. Vertical Control for Projective Shimura Varieties	219
9. Hilbert Modular Forms	230
10. Igusa Towers ..	241
References	252
F. OORT — <i>Newton polygons and p-divisible groups: a conjecture by Grothendieck</i>	255
Introduction	255
1. Notations ..	256
2. Results : deformations of p -divisible groups	259
3. Results : deformations of polarized p -divisible groups and of abelian varieties	260
4. Methods : deformations to $a \leq 1$	261
5. Methods : Cayley-Hamilton	263
6. Polarized abelian varieties and quasi-polarized p -divisible groups	263
7. Some questions and conjectures	265
References	267
M. RAPOPORT — <i>A guide to the reduction modulo p of Shimura varieties</i>	271
1. Motivation : The elliptic modular curve	273
Part I. Local theory	
2. Parahoric subgroups	277
3. μ -admissible and μ -permissible set	280
4. Affine Deligne-Lusztig varieties	288
5. The sets $X(\mu, b)_K$	291
6. Relations to local models	297
Part II. Global theory	
7. Geometry of the reduction of a Shimura variety	299
8. Pseudomotivic and quasi-pseudomotivic Galois gerbs	302
9. Description of the point set in the reduction	305
10. The semi-simple zeta function	308
References	311
Notes added June 2003	314
Additional references	318
L. SAPER — <i>\mathcal{L}-modules and the Conjecture of Rapoport and Goresky-MacPherson</i>	319
1. Introduction	320
2. Compactifications	320
3. The conjecture	322

4. A generalization	323
5. \mathcal{L} -modules	324
6. Examples of \mathcal{L} -modules	326
7. Micro-support of \mathcal{L} -modules	326
8. A vanishing theorem for \mathcal{L} -modules	328
9. Micro-purity of intersection cohomology	329
10. Functoriality of micro-support and proof of the Main Theorem	330
11. Example/application: ordinary cohomology	331
References	333
D. SOUDRY — <i>On Langlands functoriality from classical groups to GL_n</i>	335
Introduction	335
1. The weak lift from SO_{2n+1} to GL_{2n}	337
2. L -functions for $G \times GL_k$, where G is a quasi-split classical group (generic representations)	347
3. On the weak lift from a quasi-split classical group to GL_N	361
4. Illustrations of Proofs in Low Rank Examples	368
References	388
M. STRAUCH — <i>On the Jacquet-Langlands correspondence in the cohomology of the Lubin-Tate deformation tower</i>	391
1. Introduction	392
2. Deformation spaces and their cohomology groups	394
3. The approach via a Lefschetz trace formula	400
4. Fixed points and the period morphism	404
References	408
