Preface	ix
1. Introduction and Background	1
1.1 Errare Humanum Est	1
1.2 Why a Statistical Version of Nash Equilibrium?	5
1.3 Six Guiding Principles for Statistical Game Theory	7
1.4 A Road Map	8
2. Quantal Response Equilibrium in Normal-Form Games	10
2.1 The Reduced-Form Approach: Regular QRE	13
2.2 Two Simple Regular QRE Models	15
2.2.1 <i>The Luce Model and a Power-Law Generalization</i>	16
2.2.2 <i>QRE Based on Distribution Functions</i>	19
2.3 Properties of Logit QRE	22
2.3.1 <i>Examples to Illustrate Logit-QRE-Based Refinements</i>	24
2.4 Alternative Models Related to Regular QRE	31
2.4.1 <i>Rosenthal's Linear Response Model</i>	31
2.4.2 <i>Van Damme's Control Cost Model</i>	32
2.5 Structural Approach to QRE	35
2.5.1 <i>An Equilibrium Model of Action Trembles</i>	35
2.5.2 <i>Structural QRE: An Equilibrium Model of Payoff Trembles</i>	39
2.6 On the Empirical Content of QRE	42
2.6.1 <i>Empirical Restrictions of Regular QRE</i>	43
2.6.2 <i>Empirical Restrictions of Structural QRE</i>	46
2.6.3 <i>Regularity with Structural QRE</i>	48
2.6.4 <i>Structural versus Reduced-Form QRE</i>	49
2.7 QRE for Continuous Games	53
3. Quantal Response Equilibrium in Extensive-Form Games	63
3.1 Regular QRE for Extensive-Form Games	67
3.2 Structural AQRE for Extensive-Form Games	72
3.2.1 <i>Notation</i>	72
3.2.2 <i>Agent Quantal Response Equilibrium</i>	74

3.3	Logit AQRE	76
3.4	AQRE Analysis of the Centipede Game	85
4.	Heterogeneity	88
4.1	Skill and Role Heterogeneity	90
4.1.1	<i>Systematic Heterogeneity Depending on Player Roles</i>	90
4.1.2	<i>Idiosyncratic Heterogeneity</i>	90
4.2	Heterogeneous Quantal Response Equilibrium	91
4.3	Skill Heterogeneity without Rational Expectations	92
4.3.1	<i>Egoistic Beliefs about Opponents</i>	92
4.3.2	<i>Unconstrained Point Beliefs about Opponents' Skill</i>	93
4.4	QRE without Rational Expectations	94
4.4.1	<i>Subjective Heterogeneous QRE</i>	94
4.4.2	<i>Truncated QRE and Cognitive Hierarchy</i>	96
4.5	Noisy Introspection	103
4.5.1	<i>Noisy Rationalizability</i>	107
4.5.2	<i>Noisy Introspection in Extensive-Form Games</i>	109
5.	Dynamics and Learning	112
5.1	QRE in Infinitely Repeated Games	113
5.1.1	<i>Notation</i>	115
5.1.2	<i>A Finite Recursive Form for Repeated Games</i>	116
5.2	QRE in Dynamic and Stochastic Games	121
5.2.1	<i>Markov Perfect Equilibrium</i>	122
5.2.2	<i>Logit Markov QRE</i>	125
5.3	Evolutionary Dynamics and Logit QRE	127
5.4	Stochastic Learning Equilibrium	133
5.4.1	<i>Some Alternative Learning Rules</i>	134
5.4.2	<i>Beliefs and Probabilistic Choice</i>	137
5.4.3	<i>History Formation</i>	138
5.4.4	<i>Stochastic Learning Equilibrium</i>	138
6.	QRE as a Structural Model for Estimation	141
6.1	The QRE Estimation Approach	142
6.1.1	<i>Estimation Program for Generalized Matching Pennies</i>	147
6.2	Estimation and Methodological Issues	151
6.2.1	<i>Multiple Equilibria</i>	152
6.2.2	<i>Estimation Methods</i>	154
6.2.3	<i>Unobserved Heterogeneity</i>	158

7. Applications to Game Theory	161
7.1 The Traveler's Dilemma	164
7.1.1 <i>Traveler's Dilemma Experimental Data</i>	165
7.1.2 <i>Logit QRE Claim Distributions</i>	167
7.2 The Compromise Game	169
7.2.1 <i>Simultaneous versus Sequential Compromise Games</i>	170
7.2.2 <i>The Logic of Equilibrium</i>	171
7.2.3 <i>QRE with Continuous Types and Binary Action Spaces</i>	172
7.2.4 <i>Estimating QRE, TQRE, and α-Cursed QRE</i>	177
7.3 Simplified Poker	180
7.4 Signaling Games	182
7.4.1 <i>Banks, Camerer, and Porter (1994)</i>	184
7.4.2 <i>Brandts and Holt (1992, 1993)</i>	188
7.5 Social Learning	190
7.5.1 <i>The Basic Model</i>	191
7.5.2 <i>Nash Equilibrium</i>	193
7.5.3 <i>AQRE in the Information Cascade Game</i>	194
7.5.4 <i>Belief Dynamics Implied by QRE</i>	196
7.5.5 <i>An Experiment on Self-Correcting Cascades</i>	197
7.5.6 <i>Estimation</i>	202
8. Applications to Political Science	206
8.1 Participation Games	207
8.1.1 <i>General Participation Games</i>	209
8.1.2 <i>Participation Games with Negative Externalities</i>	210
8.1.3 <i>Participation Games with Positive Externalities</i>	212
8.1.4 <i>Positive and Negative Externalities in Voting Games</i>	214
8.2 Incomplete Information and Voter Turnout	220
8.2.1 <i>QRE Model of Turnout with Private Information</i>	221
8.2.2 <i>Experimental Data</i>	221
8.2.3 <i>Asymptotic Voter Turnout Predicted by QRE</i>	224
8.3 Information Aggregation by Voting	225
8.3.1 <i>Rational Strategic Voting in Juries</i>	227
8.3.2 <i>Experimental Data</i>	229
8.3.3 <i>QRE Voting in Juries</i>	231
8.4 Markov QRE and Dynamic Legislative Bargaining	232
8.4.1 <i>Approximating MPE by Logit MQRE</i>	234
8.4.2 <i>Steady-State Equilibrium Dynamics</i>	234
8.4.3 <i>Using MQRE for Estimation</i>	239
8.5 Crisis Bargaining	240

9. Applications to Economics	248
9.1 Imperfect Price Competition	249
9.1.1 <i>Learning and Convergence to Equilibrium</i>	251
9.1.2 <i>Logit QRE and Logit SLE Price Distributions</i>	254
9.2 Minimum-Effort Coordination Games	257
9.2.1 <i>Stochastic Potential and Logit QRE</i>	258
9.2.2 <i>A Coordination-Game Experiment</i>	260
9.3 All-Pay Auctions	261
9.3.1 <i>Rent Dissipation</i>	265
9.3.2 <i>Own-Payoff Effects in Asymmetric All-Pay Auctions</i>	267
9.4 Private-Value Auctions	269
9.4.1 <i>Two Simple Auction Games</i>	270
9.5 Common-Value Auctions	273
9.5.1 <i>The Maximum-Value Auction Game</i>	275
9.5.2 <i>Logit QRE for the Maximum-Value Auction Game</i>	276
9.5.3 <i>Estimating HQRE for the Maximum-Value Auction Game</i>	276
10. Epilogue: Some Thoughts about Future Research	281
10.1 Theory	283
10.1.1 <i>Repeated Games</i>	283
10.1.2 <i>Correlated Equilibrium, Preplay Communication, and Mechanism Design</i>	284
10.1.3 <i>Endogenizing the Quantal Response Parameter</i>	285
10.2 Applications	286
10.2.1 <i>Bargaining Games: Legislative Bargaining, Offer/Counteroffer</i>	286
10.2.2 <i>The Winner's Curse</i>	286
10.3 Methodology	287
10.4 Closing Remarks	289
References	291
Index	301
