Contents

Chapter I Singularity Theory 1
1 Basic Properties of Complex Spaces and Germs 8
1.1 Weierstraß Preparation and Finiteness Theorem 8
1.2 Application to Analytic Algebras 23
1.3 Complex Spaces 35
1.4 Complex Space Germs and Singularities 55
1.5 Finite Morphisms and Finite Coherence Theorem 64
1.6 Applications of the Finite Coherence Theorem 75
1.7 Finite Morphisms and Flatness 80
1.8 Flat Morphisms and Fibres 87
1.9 Normalization and Non-Normal Locus 94
1.10 Singular Locus and Differential Forms 100
2 Hypersurface Singularities 110
2.1 Invariants of Hypersurface Singularities 110
2.2 Finite Determinacy 126
2.3 Algebraic Group Actions 135
2.4 Classification of Simple Singularities 144
3 Plane Curve Singularities 161
3.1 Parametrization 162
3.2 Intersection Multiplicity 174
3.3 Resolution of Plane Curve Singularities 181
3.4 Classical Topological and Analytic Invariants 201

Chapter II. Local Deformation Theory 221
1 Deformations of Complex Space Germs 222
1.1 Deformations of Singularities 222
1.2 Embedded Deformations 228
1.3 Versal Deformations 234
1.4 Infinitesimal Deformations 246
1.5 Obstructions 259
2 Equisingular Deformations of Plane Curve Singularities 266

2.1 Equisingular Deformations of the Equation 267
2.2 The Equisingularity Ideal 282
2.3 Deformations of the Parametrization 296
2.4 Computation of T^1 and T^2 308
2.5 Equisingular Deformations of the Parametrization 322
2.6 Equinormalizable Deformations 340
2.7 δ-Constant and μ-Constant Stratum 352
2.8 Comparison of Equisingular Deformations 360

Appendix A. Sheaves 379
A.1 Presheaves and Sheaves 379
A.2 Gluing Sheaves 381
A.3 Sheaves of Rings and Modules 382
A.4 Image and Preimage Sheaf 383
A.5 Algebraic Operations on Sheaves 384
A.6 Ringed Spaces 385
A.7 Coherent Sheaves 387
A.8 Sheaf Cohomology 388
A.9 Čech Cohomology and Comparison 392

Appendix B. Commutative Algebra 397
B.1 Associated Primes and Primary Decomposition 397
B.2 Dimension Theory 399
B.3 Tensor Product and Flatness 402
B.4 Artin-Rees and Krull Intersection Theorem 406
B.5 The Local Criterion of Flatness 407
B.6 The Koszul Complex 410
B.7 Regular Sequences and Depth 414
B.8 Cohen-Macaulay, Flatness and Fibres 416
B.9 Auslander-Buchsbaum Formula 422

Appendix C. Formal Deformation Theory 425
C.1 Functors of Artin Rings 425
C.2 Obstructions 431
C.3 The Cotangent Complex 436
C.4 Cotangent Cohomology 441
C.5 Relation to Deformation Theory 443
