Contents

1 The Set of Real Numbers 1
1.1 Sets and Mappings 1
1.2 The Set **R** 3
1.3 The Subset **N** and the Principle of Induction 7
1.4 The Completeness Property 13
1.5 Sequences and Limits 17
1.6 Nonnegative Series and Decimal Expansions 27
1.7 Signed Series and Cauchy Sequences 32

2 Continuity 43
2.1 Compactness 43
2.2 Continuous Limits 44
2.3 Continuous Functions 48

3 Differentiation 63
3.1 Derivatives 63
3.2 Mapping Properties 71
3.3 Graphing Techniques 77
3.4 Power Series 87
3.5 Trigonometry 99
3.6 Primitives 108

4 Integration 115
4.1 The Cantor Set 115
4.2 Area 119
4.3 The Integral 134
4.4 The Fundamental Theorem of Calculus 151
4.5 The Method of Exhaustion 161

5 Applications 173
5.1 Euler's Gamma Function 173
5.2 The Number π 179
5.3 Gauss' Arithmetic-Geometric Mean (AGM) 192
5.4 The Gaussian Integral 201
5.5 Stirling's Approximation of $n!$ 210
5.6 Infinite Products 216
5.7 Jacobi's Theta Functions 225
5.8 Riemann's Zeta Function 231
5.9 The Euler–Maclaurin Formula 241

A Solutions 249
A.1 Solutions to Chapter 1 249
A.2 Solutions to Chapter 2 263
A.3 Solutions to Chapter 3 270
A.4 Solutions to Chapter 4 289
A.5 Solutions to Chapter 5 307
