
Contents

1 Understanding the psychology of teaching and learning 1

Education as a storm center | Educational psychology and the search for answers | Understanding educational processes | Psychology and the professional status of teachers | *Focal areas of educational psychology* | The learner | The learning process | The learning situation | *What "understanding" means* | A many-sided approach | An awareness of important factors | Probing beneath the surface of behavior | Thinking causally | Making valid predictions | *Sources of understanding* | Laymen's concepts of education | What psychologists can contribute | Teachers' experiences | Educational psychology as applied science | Interpreting educational measurements

2 Learners and their motives 19

The inside (and outside) story of motivation | Why do learners behave as they do? | The need to become competent and effective | "Need" defined | Basic needs | Anxiety, tension, and apprehensiveness | How we learn to be anxious | The human organism as an energy system | Rewards, reinforcements, and benefits | Stimulation, arousal, and excitement | Genetic aspects of behavior and motivation | *Social influences on personality and motivation* | The case of the first-born child | Perception and personality | The "self"—the center of the psychological universe | How "the self" operates | "Reality" is how we perceive it | How perceptions change with maturity | *Understanding motives* | Motives that lie "beyond awareness" | Motive as purpose and goal | Motives as multiple causes of behavior

3 The growth and maturation of the learner

43

Indications of growth and development | Maturity: a concept larger than "age" | Aspects and dimensions of development | *Cognitive development* | The responsibility of the school | Piaget's developmental stages | Do schools help children learn to think? | Intervention and stimulation during the preschool years | *Social development* | Social competence and the curriculum | Directions of social development | Morality and social learning | *Emotional or affective development* | Emotional maturity | Phases of emotional development | *Physical development* | Adaptation of the school to differences in levels of maturity | Sex differences in physical development | Relationship with other types of development | Nutritional deficiencies | *Individual differences in growth and development* | Consistencies and inconsistencies within individuals | Accelerated and retarded development | Providing for individual differences

4 The learner and his family

75

The family as teacher | Learning that occurs incidentally and unintentionally | *The family situation* | Change and instability | What if the mother works? | The emotional climate of the family | How children's behavior and parental attitudes interact | *Families as agents of the culture* | Teaching and learning a "life style" | Children's problems and culture conflict | Social class and subcultural differences | Social-class patterns of behavior | Aggression and physical punishment | Cultural values and children's attitudes | The middle-class way of life: words, words, and more words | How an understanding of social class is helpful | Meeting needs of learners from lower-social-class homes

5 The learner and the peer group

99

The need to relate to others | *Relations with others during childhood and adolescence* | Who children like best | Early stages in peer-group formation | Relations with peers during the middle years of childhood | Conflicts between adult demands and peer-group pressures | Relations with peers during adolescence |

Adolescent relations with authority | The tyranny of the peer group | *Measuring peer acceptance* | Using sociometry | Teachers' estimates of peer acceptance | What sociometric data tell us about children and adolescents | *Social forces influencing behavior* | Peer-group norms | The teacher and the peer group: collaborators or antagonists? | Cohesiveness | Morale | The psychological climate of the classroom | The effects of a competitive climate | *Hostility among peer groups* | Ethnic prejudice | Effects of intergroup hostility | How schools can deal with intergroup hostility and aggression

6 Problem behavior in the classroom

129

Teachers' attitudes toward problem behavior | Personal difficulties and learning progress | Everyday types of problems | Prevalence of problem behavior | Understanding the meaning of problem behavior | *Emotional problems of everyday living* | Anxiety as a cause and effect of problem behavior | Mechanisms of escape and defense | Rationalization | Displaced hostility | Self-punishment | Repression | Conformity | Shyness | Learning defense mechanisms | *Background factors in problem behavior* | Emotional conflict as a basis for problem behavior | Problem behavior and students' social environment | The hyperactive child | Prevalence of problem behavior among boys | Discouragement as a factor in problem behavior | School policies and conditions that are detrimental to mental health | Ways in which schools can improve mental health

7 Traditional / conventional views of learning and instruction

157

The learning process | Everyone has a theory | The "carrot-and-stick" approach | "The mind is a storehouse" | "Didn't they teach you *anything* in grade school?" | "Practice makes perfect" | "Teaching = telling; learning = being told" | "How to ride a bicycle: First you master the principles of mass, weight, and motion, and then . . ." | "Geometry is good for you—it teaches you how to think" | "School is preparation for life: Since life is grim, school should be grimmer" | "If learning isn't fun, it isn't learning" | The pervasive power of traditional/conventional beliefs about learning

8 Psychological concepts of the teaching-learning process

181

Why theory is necessary | The development of theoretical concepts based on science | Putting traditional/conventional theories to the test | *Requirements of a usable teaching-learning theory* | What an effective teaching-learning theory should do | Assumptions underlying an effective teaching-learning theory | Students' motives and teachers' theories | *Conditioning or reinforcement theories* | Classical conditioning | Operant conditioning | Operant conditioning in the classroom | The rise and fall of the teaching machine | Learning theory and teaching experience: an unbridged gap | *Theories which emphasize the wholeness of experience* | Gestaltist approaches | Field theory | Learning as problem solving: a cognitive approach | Phenomenological concepts of learning | Teaching for mastery | *The great humanist-behaviorist controversy* | Skinnerians versus Rogerians | What is lacking: a social view of learning

9 Cognitive and affective factors in learning

209

The need for attention | Intrinsic and extrinsic rewards | Factors which interfere with learning | *The curriculum and its presentation* | Systems of classifying levels of learning | The learning of skills and information | The learning of concepts | The learning of attitudes | Attitudinal patterns and classroom learning | Wholes and parts | Problems encountered in using the whole method of learning | *Personality factors and student performance* | Personality factors as predictors | Readiness to learn | The influence of anxiety on learning | On being normally anxious

10 Managing classroom learning

235

Are teachers necessary? | *Teachers as managers* | The teacher as a model | The teacher as a psychological weathermaker | The teacher as a questionposer | Closed and open systems | *Teachers' expectations and students' behavior* | The "Pygmalion effect": an elusive phenomenon | Student norms versus teacher expectations | What teachers' anxiety does to their perceptions | *Directing and controlling learning* | Is it guidance? Is it manipulation? Does it get results? | "But Mom, I have to do my homework . . ." | Evaluation, feedback,

and anxiety | Teacher-centered versus group-centered methods | Overdwelling and other dominating habits | Getting it all together through structure and organization | The teacher as an autocrat | Communication and intercommunication | Communication as an essential skill | The increasing complexity of teaching-learning problems

11 Discipline and the learning situation

257

The meaning of discipline | *Styles of discipline* | Teacher-imposed discipline | Punishment | Group-imposed discipline | Self-imposed discipline | Task-imposed discipline | *Methods and techniques of discipline* | Class management through "stage setting" | The teacher's role as an anxiety reducer | How much anxiety is "enough"? | Control of misbehavior through behavior modification | Teachers' anxieties about discipline

12 The learner-centered classroom

285

Deficiencies and strengths of traditional/conventional approaches to education | *Modern approaches to education* | The managerial approach | Characteristics of learner-centered or "open" methods | Individualized approaches to instruction | Computer-assisted instruction (CAI) | Innovations in curriculum and instruction | Getting the student involved | Helping students learn from one another | *Learners in group settings* | Promoting the major objectives of education | Group relations in the classroom | Group discussion | The use of "buzz groups" | Committees | Getting the most out of group methods | *Current status of learner-centered methods* | Whatever happened to free schools? | Resistance to open schools and other learner-centered methods | Prospects for learner-centered methods

13 The evaluation of learning

315

The teacher's role as an evaluator | *Observing and measuring progress toward goals* | Specifying goals in behavioral terms | Measurement, evaluation, and the use of tests | Evaluational feedback and learning | Attitudes toward evaluation | Contract plans with built-in evaluation | *Teacher-made tests* | Oral examinations

| Essay examinations | Choice-type or "objective" tests | Reliability and validity
| *Standardized tests* | The growth of standardized testing | Standardized
achievement test batteries | Interpreting test results | Accountability: the search
for hard evidence | The new look: the management assessment model | Ac-
countability and teaching | "Never mind the details—just tell me in words of one
syllable . . ." | Criterion-referenced testing | Reporting pupil progress

14 Individual differences and their measurement

349

What is "different" about individual differences? | *Measuring cognitive differ-
ences* | The first intelligence tests | Group intelligence tests: their promise and
disappointment | What intelligence tests measure | Stability and change in IQ |
The environment-heredity controversy | Are intelligence tests "unfair" to some
children? | Underachievers: a puzzling problem | *Aptitude, interest, and person-
ality measurement* | Measuring special aptitudes | Measuring vocational inter-
ests | Questionnaire measures of personal and social adjustment | Assessing
personal and social adjustment with projective tests | Public criticism of person-
ality assessment | Observational appraisals of pupils' social behavior | *Apprais-
ing and fostering creativity* | Divergent and convergent thinking | Independence,
nonconformity, and creativity | Can creativity be taught?

15 Exceptional children: learners who have special needs

377

Adapting educational practices to the needs of learners | *Special education for
exceptional children* | What is special about special education? | Attitudes, mo-
tives, and treatment | Labeling and classifying children: more of a hindrance
than a help | Failure and overprotection | *Problems of slow and fast learners* |
Concepts of mental retardation | Helping mentally retarded children | Nonpro-
motion of slow learners | The problems of gifted children | Identifying gifted stu-
dents | Special programs for the gifted | Does "double promotion" help or hin-
der gifted children? | Ability grouping: the X, Y, Z of homogeneity | *Social and
emotional maladjustments* | Communication disorders | The delinquent | Vul-
nerability to delinquency | The severely disturbed child | Identifying "excep-
tional children"

16 Problems of the socially disadvantaged learner

409

Social deprivation and poverty | *Psychological effects of social deprivation* | The inner-city environment | The socially deprived preschool child | The home of the socially disadvantaged child | Rewards: ego, social, and direct | What happens when rewards are postponed | n Aff versus n Ach | "Good behavior" versus achievement | *Social disadvantage and cognitive development* | Differences in rates of cognitive development | IQ and social deprivation | Experiences of black children and youth | *Tasks for remedial programs* | Preparation for free choices | Building ego strength | Attitudes of teachers in remedial programs | *The Early Training Project at George Peabody College* | Background | Reinforcement of learning experiences | Developing n Ach | Delay of gratification and reinforcement | Learning to persist | Follow-up with mothers | Results | *Planning and operating intervention and enrichment programs* | The need for careful planning | Verbal facility and "cute little boys" | Programs for adolescents | Learning to work with inner-city adolescents | Using paraprofessionals in inner-city schools

17 Psychological services: individualized help for the learner

439

The shortcomings of mass education | The need for individualized attention | *Psychological or guidance specialists* | The school counselor | The school psychologist | The school social worker | Medical specialists | Administrative personnel | *Individualized attention from teachers* | The need for special instruction | Personal adjustment problems | *Individualized attention from psychological specialists* | Emotional disturbances | Problems of choosing a career | The guidance worker and the "dropout" | Group counseling of students with problems | The problem of academic pressure | Helping schools adjust to the psychological needs of students | The case conference | "Life-space" or "crisis" interviewing | Collaboration of teachers and guidance workers

18 The psychology of being a teacher

461

The importance of self-understanding | *Instructional and administrative roles* | The instructor | The teacher as model | The classroom manager | Clerk | Youth

group worker | Public-relations person | *Psychologically oriented roles* | The artist in human relations | The social psychologist | The catalyst | The clinician | *Self-expressive roles* | The need to help others | The learner and scholar | The parent-figure | The power seeker | The security seeker | *Disintegrative and integrative forces in teaching* | Bureaucratic restrictions | Conflicts in roles | Conflicts in expectations | The teacher and the public: conflicts in priorities | Conflicts in loyalties and responsibilities | Teachers as targets for hostility | Psychological effects of disintegrative factors | Integrative factors in teaching
