Contents

Preface	ix
Chapter 1. Wavelets on the Line	1
1.1. Riesz bases	1
1.2. MRA and scaling functions	7
1.3. Wavelet spaces	15
1.4. Haar, Battle-Lemarie, Strömberg, and Meyer systems	23
1.5. Uncertainty constants	30
1.6. Computational algorithms	40
1.7. Convergence of wavelet expansions	42
1.8. Wavelet frames	52
Chapter 2. Multivariate Wavelets	63
2.1. Separable MRA	63
2.2. Matrix dilation	66
2.3. Nonseparable MRAs	69
2.4. Construction of refinable functions	74
2.5. Conditions of biorthogonality	79
2.6. Construction of wavelet functions	90
2.7. Wavelet bases	98
2.8. Haar MRAs	105
Chapter 3. Compactly Supported Refinable Functions	115
3.1. Existence, uniqueness, and weak convergence	115
3.2. Strang-Fix conditions	117
3.3. Approximation by shifts of refinable functions	125
3.4. Linear independence, stability, and orthogonality of integer shifts	130
3.5. Examples and applications	140
Chapter 4. Wavelets with Compact Support	143
4.1. Construction of orthogonal wavelets	143
4.2. Wavelets generated by a compactly supported scaling function	152
4.3. Time-frequency localization	156
4.4. Asymptotics of zeros of Bernstein's polynomials	175
Chapter 5. Fractal Properties of Wavelets	191
5.1. Refinable functions and fractal curves	191
5.2. Fractal curves in the space L_p	198
5.3. Smoothness of fractal curves in the spaces W_p^r and C^r	200
5.4. Local smoothness of fractal curves	204
5.5. Examples	216

Chapter 6. Factorization of Refinement Equations	219
6.1. Operators corresponding to the clean mask	219
6.2. Mask cleaning procedure	222
6.3. Space \tilde{A}_n and the general form of the operators T_0, T_1 on it	226
6.4. Factorization theorems	231
Chapter 7. Smoothness of Compactly Supported Wavelets	233
7.1. Matrix method	233
7.2. Local smoothness of wavelets	236
7.3. Special cases and examples	241
7.4. Method of pointwise estimation of the Fourier transform	256
7.5. Estimation by invariant cycles	262
Chapter 8. Nonstationary Wavelets	271
8.1. General theory of nonstationary wavelets	271
8.2. Nonstationary infinitely differentiable orthonormal wavelets with compact support	280
8.3. Decay rate of the Fourier transforms of elements of a nonstationary scaling sequence	288
8.4. Uncertainty constants for Ψ	294
8.5. Nonstationary wavelets with modified Daubechies masks	299
8.6. Uncertainty constants for Ψ^a	302
8.7. Nonstationary wavelets bases in Sobolev spaces	305
Chapter 9. Periodic Wavelets	315
9.1. PMRA and scaling sequence	315
9.2. Construction of wavelet functions	325
9.3. Wavelet packets	330
9.4. Generating function	332
9.5. Kotelnikov-Shannon system	338
Chapter 10. Approximation by Periodic Wavelets	345
10.1. Convergence of wavelet expansions in norm	345
10.2. Convergence of wavelet expansions almost everywhere	349
10.3. Direct and inverse theorems	358
10.4. Convergence of wavelet expansions at a point	370
Chapter 11. Remarkable Properties of Wavelet Bases	381
11.1. Unconditional wavelet bases	381
11.2. Optimal polynomial bases in the space $C(\mathbb{T})$	390
11.3. Optimal polynomial bases in the space $C[-1, 1]$	393
11.4. Wavelet bases in Besov and Lizorkin-Triebel spaces	407
11.5. Linear operators in the Lizorkin-Triebel spaces	431
Appendix A. Auxiliary Facts of the Theory of Functions and Functional Analysis	453
A.1. Bases	453
A.2. Linear functionals in normed spaces	454
A.3. Distributions	455
A.4. Marcinkiewicz interpolation theorem	458

A.5. Spectral radius	458
A.6. Joint spectral radius and the Lyapunov exponent	459
A.7. Smoothness and the decay rate of the Fourier transform	462
A.8. Wiener theorem for L_2	464
A.9. Lebesgue sets	465
A.10. Absolutely continuous functions	469
A.11. Nonnegative trigonometric polynomials, Riesz's lemma	469
A.12. The Enestrem-Keakey theorem about zeros of polynomials	470
A.13. Sobolev spaces	471
A.14. Moduli of continuity	471
A.15. Approximation by trigonometric polynomials	472
A.16. Multidimensional Fejer means	473
A.17. Self-similar sets	474
A.18. Difference equations	475
A.19. Landau-Kolmogorov inequality	478
A.20. Legendre polynomials	478
Appendix B. Historical Comments	481
Bibliography	493
Index	505
