Preface	ix
Overview	1
0.1 The isomorphism problem of free group factors	1
0.2 From the relation of free generators to free probability	3
0.3 Random matrices	5
0.4 Entropy and large deviations	9
0.5 Voiculescu's free entropy for multivariables	12
0.6 Operator algebras	14
1 Probability Laws and Noncommutative Random Variables	19
1.1 Distribution measure of normal operators	20
1.2 Noncommutative random variables	32
2 The Free Relation	39
2.1 The free product of noncommutative probability spaces	40
2.2 The free relation	42
2.3 The free central limit theorem	48
2.4 Free convolution of measures	52
2.5 Moments and cumulants	60
2.6 Multivariables	71
3 Analytic Function Theory and Infinitely Divisible Laws	91
3.1 Cauchy transform, Poisson integral, and Hilbert transform	92
3.2 Relation between Cauchy transform and R -series	95
3.3 Infinitely divisible laws	98

4	Random Matrices and Asymptotically Free Relation	113
4.1	Random matrices and their eigenvalues	114
4.2	Random unitary matrices and asymptotic freeness	135
4.3	Asymptotic freeness of some random matrices	146
4.4	Random matrix models of noncommutative random variables	161
5	Large Deviations for Random Matrices	175
5.1	Boltzmann entropy and large deviations	176
5.2	Entropy and random matrices	181
5.3	Logarithmic energy and free entropy	189
5.4	Gaussian and unitary random matrices	209
5.5	The Wishart matrix	226
5.6	Entropy and large deviations revisited	239
6	Free Entropy of Noncommutative Random Variables	245
6.1	Definition and basic properties	246
6.2	Calculus for power series of noncommutative variables	253
6.3	Change of variable formulas for free entropy	259
6.4	Additivity of free entropy	269
6.5	Free entropies of unitary and non-selfadjoint random variables	275
6.6	Relation between different free entropies	280
7	Relation to Operator Algebras	301
7.1	Free group factors and semicircular systems	302
7.2	Interpolated free group factors	310
7.3	Free entropy dimension	327
7.4	Applications of free entropy	346
	Bibliography	357
	Index	371
