Contents

1 Setting the Scene **1**
1.1 What Is a Differential Equation? 1
1.1.1 Concepts 2
1.2 The Solution and Its Properties 4
1.2.1 An Ordinary Differential Equation 4
1.3 A Numerical Method 6
1.4 Cauchy Problems 10
1.4.1 First-Order Homogeneous Equations 11
1.4.2 First-Order Nonhomogeneous Equations 14
1.4.3 The Wave Equation 15
1.4.4 The Heat Equation 18
1.5 Exercises 20
1.6 Projects 28

2 Two-Point Boundary Value Problems **39**
2.1 Poisson's Equation in One Dimension 40
2.1.1 Green's Function 42
2.1.2 Smoothness of the Solution 43
2.1.3 A Maximum Principle 44
2.2 A Finite Difference Approximation 45
2.2.1 Taylor Series 46
2.2.2 A System of Algebraic Equations 47
2.2.3 Gaussian Elimination for Tridiagonal Linear Systems 50
2.2.4 Diagonal Dominant Matrices 53

2.2.5 Positive Definite Matrices 55
2.3 Continuous and Discrete Solutions 57
2.3.1 Difference and Differential Equations 57
2.3.2 Symmetry 58
2.3.3 Uniqueness 61
2.3.4 A Maximum Principle for the Discrete Problem . . . 61
2.3.5 Convergence of the Discrete Solutions 63
2.4 Eigenvalue Problems 65
2.4.1 The Continuous Eigenvalue Problem 65
2.4.2 The Discrete Eigenvalue Problem 68
2.5 Exercises 72
2.6 Projects 82

3 The Heat Equation **87**
3.1 A Brief Overview 88
3.2 Separation of Variables 90
3.3 The Principle of Superposition 92
3.4 Fourier Coefficients 95
3.5 Other Boundary Conditions 97
3.6 The Neumann Problem 98
3.6.1 The Eigenvalue Problem 99
3.6.2 Particular Solutions 100
3.6.3 A Formal Solution 101
3.7 Energy Arguments 102
3.8 Differentiation of Integrals 106
3.9 Exercises 108
3.10 Projects 113

4 Finite Difference Schemes for the Heat Equation **117**
4.1 An Explicit Scheme 119
4.2 Fourier Analysis of the Numerical Solution 122
4.2.1 Particular Solutions 123
4.2.2 Comparison of the Analytical and Discrete Solution 127
4.2.3 Stability Considerations 129
4.2.4 The Accuracy of the Approximation 130
4.2.5 Summary of the Comparison 131
4.3 Von Neumann's Stability Analysis 132
4.3.1 Particular Solutions: Continuous and Discrete 133
4.3.2 Examples 134
4.3.3 A Nonlinear Problem 137
4.4 An Implicit Scheme 140
4.4.1 Stability Analysis 143
4.5 Numerical Stability by Energy Arguments 145
4.6 Exercises 148

5 The Wave Equation **159**
5.1 Separation of Variables 160
5.2 Uniqueness and Energy Arguments 163
5.3 A Finite Difference Approximation 165
5.3.1 Stability Analysis 168
5.4 Exercises 170

6 Maximum Principles **175**
6.1 A Two-Point Boundary Value Problem 175
6.2 The Linear Heat Equation 178
6.2.1 The Continuous Case 180
6.2.2 Uniqueness and Stability 183
6.2.3 The Explicit Finite Difference Scheme 184
6.2.4 The Implicit Finite Difference Scheme 186
6.3 The Nonlinear Heat Equation 188
6.3.1 The Continuous Case 189
6.3.2 An Explicit Finite Difference Scheme 190
6.4 Harmonic Functions 191
6.4.1 Maximum Principles for Harmonic Functions 193
6.5 Discrete Harmonic Functions 195
6.6 Exercises 201

7 Poisson's Equation in Two Space Dimensions **209**
7.1 Rectangular Domains 209
7.2 Polar Coordinates 212
7.2.1 The Disc 213
7.2.2 A Wedge 216
7.2.3 A Corner Singularity 217
7.3 Applications of the Divergence Theorem 218
7.4 The Mean Value Property for Harmonic Functions 222
7.5 A Finite Difference Approximation 225
7.5.1 The Five-Point Stencil 225
7.5.2 An Error Estimate 228
7.6 Gaussian Elimination for General Systems 230
7.6.1 Upper Triangular Systems 230
7.6.2 General Systems 231
7.6.3 Banded Systems 234
7.6.4 Positive Definite Systems 236
7.7 Exercises 237

8 Orthogonality and General Fourier Series **245**
8.1 The Full Fourier Series 246
8.1.1 Even and Odd Functions 249
8.1.2 Differentiation of Fourier Series 252
8.1.3 The Complex Form 255

8.1.4 Changing the Scale 256
8.2 Boundary Value Problems and Orthogonal Functions 257
8.2.1 Other Boundary Conditions 257
8.2.2 Sturm-Liouville Problems 261
8.3 The Mean Square Distance 264
8.4 General Fourier Series 267
8.5 A Poincaré Inequality 273
8.6 Exercises 276

9 Convergence of Fourier Series **285**
9.1 Different Notions of Convergence 285
9.2 Pointwise Convergence 290
9.3 Uniform Convergence 296
9.4 Mean Square Convergence 300
9.5 Smoothness and Decay of Fourier Coefficients 302
9.6 Exercises 307

10 The Heat Equation Revisited **313**
10.1 Compatibility Conditions 314
10.2 Fourier's Method: A Mathematical Justification 319
10.2.1 The Smoothing Property 319
10.2.2 The Differential Equation 321
10.2.3 The Initial Condition 323
10.2.4 Smooth and Compatible Initial Functions 325
10.3 Convergence of Finite Difference Solutions 327
10.4 Exercises 331

11 Reaction-Diffusion Equations **337**
11.1 The Logistic Model of Population Growth 337
11.1.1 A Numerical Method for the Logistic Model 339
11.2 Fisher's Equation 340
11.3 A Finite Difference Scheme for Fisher's Equation 342
11.4 An Invariant Region 343
11.5 The Asymptotic Solution 346
11.6 Energy Arguments 349
11.6.1 An Invariant Region 350
11.6.2 Convergence Towards Equilibrium 351
11.6.3 Decay of Derivatives 352
11.7 Blowup of Solutions 354
11.8 Exercises 357
11.9 Projects 360

12 Applications of the Fourier Transform **365**
12.1 The Fourier Transform 366
12.2 Properties of the Fourier Transform 368

12.3 The Inversion Formula 372
12.4 The Convolution 375
12.5 Partial Differential Equations 377
12.5.1 The Heat Equation 377
12.5.2 Laplace's Equation in a Half-Plane 380
12.6 Exercises 382
