1	Introduction	1
1.1	What is ranked set sampling?	1
1.2	A historical note	7
1.3	Scope of the rest of the monograph	8
2	Balanced Ranked Set Sampling I: Nonparametric	11
2.1	Ranking mechanisms	12
2.2	Estimation of means using ranked set sample	14
2.3	Estimation of smooth-function-of-means using ranked set sample	18
2.4	Estimation of variance using an RSS sample	20
2.4.1	Naive moment estimates	20
2.4.2	Minimum variance unbiased non-negative estimate	22
2.5	Tests and confidence intervals for population mean	24
2.5.1	Asymptotic pivotal method	25
2.5.2	Choice of consistent estimates of $\sigma_{\bar{X}_{RSS}}$	25
2.5.3	Comparison of power between tests based on RSS and SRS	29
2.6	Estimation of quantiles	29
2.6.1	Ranked set sample quantiles and their properties	29
2.6.2	Inference procedures for population quantiles based on ranked set sample	32
2.6.3	The relative efficiency of RSS quantile estimate with respect to SRS quantile estimate	35
2.7	Estimation of density function with ranked set sample	35
2.7.1	RSS density estimate and its properties	36
2.7.2	The relative efficiency of the RSS density estimate with respect to its SRS counterpart	40
2.8	M-estimates with RSS data	44
2.8.1	The RSS M-estimates and their asymptotic properties	44
2.8.2	The relative efficiency of the RSS M-estimates	46

2.9	Appendix: Technical details for Section 2.4*	46
2.10	Bibliographic notes	50
3	Balanced Ranked Set Sampling II: Parametric	53
3.1	The Fisher information of ranked set samples	54
3.1.1	The Fisher information of ranked set samples when ranking is perfect	54
3.1.2	The Fisher information of ranked set samples when ranking is imperfect*	58
3.2	The maximum likelihood estimate and its asymptotic relative efficiency	63
3.3	The best linear unbiased estimation for location-scale families	66
3.4	The regularity conditions and the existence of Fisher information matrix of ranked set samples*	68
3.5	Bibliographic notes	71
4	Unbalanced Ranked Set Sampling and Optimal Designs	73
4.1	General structure of unbalanced RSS	74
4.2	Nonparametric analysis of unbalanced ranked-set data	75
4.2.1	Asymptotic properties of unbalanced ranked-set sample quantiles	75
4.2.2	Nonparametric estimation of quantiles and distribution function	76
4.2.3	Confidence interval and hypothesis testing	78
4.2.4	Estimation of statistical functionals*	79
4.2.5	Inference by bootstrapping	82
4.2.6	Simulation results	82
4.3	Parametric analysis of unbalanced ranked-set data	84
4.4	Optimal design for location-scale families	86
4.4.1	Optimal RSS for MLE	86
4.4.2	Optimal RSS for BLUE	91
4.5	Optimal design for estimation of quantiles	91
4.5.1	Optimal RSS scheme for the estimation of a single quantile	91
4.5.2	Optimal RSS scheme for the simultaneous estimation of several quantiles	94
4.6	The computation of optimal designs	95
4.7	Asymptotic relative efficiency of the optimal schemes	96
4.7.1	Asymptotic relative efficiency of the optimal schemes for parametric location-scale families	96
4.7.2	Relative efficiency of the optimal schemes for the estimation of quantiles	97
4.8	Other design methodologies	98
4.8.1	Bayesian design	99
4.8.2	Adaptive design	99

4.9	Bibliographic notes	100
5	Distribution-Free Tests with Ranked Set Sampling	103
5.1	Sign test with RSS	103
5.1.1	Distributional properties of S_{RSS}^{+*}	104
5.1.2	Decision rules of the sign test and confidence intervals for median	110
5.1.3	Effect of imperfect ranking on RSS sign test	110
5.1.4	Comparison of efficiency and power with respect to S_{SRS}^{+}	113
5.2	Mann-Whitney-Wilcoxon test with RSS	115
5.2.1	Distributional properties of U_{RSS}^{+*}	117
5.2.2	Decision rules of the RSS Mann-Whitney-Wilcoxon test	122
5.2.3	The estimate and confidence interval of Δ	123
5.2.4	Effect of imperfect ranking on RSS Mann-Whitney- Wilcoxon test	124
5.3	Wilcoxon signed rank test with RSS	124
5.3.1	Distributional properties of W_{RSS}^{+*}	125
5.3.2	Decision rules of the Wilcoxon signed rank test	130
5.3.3	Estimation of θ	131
5.3.4	Effect of imperfect ranking on RSS Wilcoxon signed rank test	133
5.4	Optimal design for distribution-free tests	133
5.4.1	Optimal design for sign test	133
5.4.2	Optimal design for Wilcoxon signed rank tests	135
5.5	Bibliographic notes	142
6	Ranked Set Sampling with Concomitant Variables	143
6.1	Multi-layer ranked set sampling	144
6.1.1	Motivation and definition	144
6.1.2	Consistency of multi-layer ranked set sampling	146
6.1.3	Comparison between multi-layer RSS and marginal RSS by simulation studies	147
6.1.4	Issues on the choice of concomitant variables	150
6.2	Adaptive ranked set sampling	151
6.2.1	The best ranking mechanism	151
6.2.2	Adaptive ranked set sampling procedure	152
6.2.3	A simulation study	153
6.3	Regression analysis based on RSS with concomitant variables	155
6.3.1	Estimation of regression coefficients with RSS	156
6.3.2	Regression estimate of the mean of Y with RSS	157
6.3.3	Comparison of the RSS regression estimate and the ordinary RSS estimate	158
6.3.4	How does a specific ranking mechanism affect the efficiency of the regression estimate?	160
6.4	Optimal RSS schemes for regression analysis	161

6.4.1	Asymptotically optimal criteria	162
6.4.2	Asymptotically optimal schemes for simple linear regression	164
6.4.3	Applications	166
6.5	Technical details*	170
6.6	Bibliographic notes	174
7	Ranked Set Sampling as Data Reduction Tools	175
7.1	Remedian: a motivation	175
7.2	Repeated ranked-set procedure for a single quantile	177
7.3	Repeated ranked-set procedure for multiple quantiles	180
7.4	Balanced repeated ranked-set procedure	184
7.5	Procedure for multivariate populations	186
8	Case Studies	191
8.1	Plantations of cinchona	191
8.2	Cost effective gasoline sampling	194
8.3	Estimation of weights of browse and herbage	195
8.4	Estimation of shrub phytomass in Appalachian oak forests ...	198
8.5	Single family homes sales price data	201
8.6	Tree data	202
