Contents

Frequently Used Notation xv

Introduction 1

CHAPTER I

The Construction, and Other General Results 6

1. Markov Processes and Their Semigroups 7
2. Semigroups and Their Generators 12
3. The Construction of Generators for Particle Systems 20
4. Applications of the Construction 30
5. The Martingale Problem 42
6. The Martingale Problem for Particle Systems 47
7. Examples 53
8. Notes and References 61
9. Open Problems 62

CHAPTER II

Some Basic Tools 64

1. Coupling 64
2. Monotonicity and Positive Correlations 70
3. Duality 84
4. Relative Entropy 88
5. Reversibility 90
6. Recurrence and Transience of Reversible Markov Chains 98
7. Superpositions of Commuting Markov Chains 106
8. Perturbations of Random Walks 109
9. Notes and References 119

CHAPTER III

Spin Systems 122

1. Couplings for Spin Systems 124
2. Attractive Spin Systems 134
3. Attractive Nearest-Neighbor Spin Systems on Z^1 144
4. Duality for Spin Systems 157
5. Applications of Duality 163
6. Additive Spin Systems and the Graphical Representation 172

7. Notes and References 175
8. Open Problems 176

CHAPTER IV
Stochastic Ising Models 179
1. Gibbs States 180
2. Reversibility of Stochastic Ising Models 190
3. Phase Transition 196
4. L_2 Theory 205
5. Characterization of Invariant Measures 213
6. Notes and References 222
7. Open Problems 224

CHAPTER V
The Voter Model 226
1. Ergodic Theorems 227
2. Properties of the Invariant Measures 239
3. Clustering in One Dimension 246
4. The Finite System 254
5. Notes and References 262

CHAPTER VI
The Contact Process 264
1. The Critical Value 265
2. Convergence Theorems 276
3. Rates of Convergence 290
4. Higher Dimensions 307
5. Notes and References 310
6. Open Problems 312

CHAPTER VII
Nearest-Particle Systems 315
1. Reversible Finite Systems 317
2. General Finite Systems 325
3. Construction of Infinite Systems 330
4. Reversible Infinite Systems 335
5. General Infinite Systems 347
6. Notes and References 353
7. Open Problems 354

CHAPTER VIII
The Exclusion Process 361
1. Ergodic Theorems for Symmetric Systems 363
2. Coupling and Invariant Measures for General Systems 380
3. Ergodic Theorems for Translation Invariant Systems 384
4. The Tagged Particle Process 395

5. Nonequilibrium Behavior 402
6. Notes and References 413
7. Open Problems 415

CHAPTER IX
Linear Systems with Values in $[0, \infty)^S$ 417
1. The Construction; Coupling and Duality 422
2. Survival and Extinction 432
3. Survival via Second Moments 442
4. Extinction in One and Two Dimensions 449
5. Extinction in Higher Dimensions 455
6. Examples and Applications 458
7. Notes and References 466
8. Open Problems 467
