Volume 192

Attractors for Degenerate Parabolic Type Equations

Messoud Efendiev

American Mathematical Society
Providence, Rhode Island

Real Sociedad Matemática Española
Madrid, Spain

Contents

Preface vii

Chapter 1. Auxiliary materials 1
1.1. Functional spaces and embedding theorems 1
1.2. Kolmogorov ε-entropy and its asymptotics in functional spaces 5
1.3. Interior regularity estimates for linear parabolic equations 7
1.4. The Nemytskii operator and its properties 11

Chapter 2. Global attractors for autonomous evolution equations 19
2.1. Existence theorem for the global attractor 19
2.2. Estimation of time derivatives for nonautonomous perturbations of regular attractors 22

Chapter 3. Exponential attractors 25
3.1. Exponential attractors for autonomous systems 25
3.2. Perturbation of exponential attractors: Autonomous case 31
3.3. Perturbation of exponential attractors: Nonautonomous case 37
3.4. Exponential attractors for a nonautonomous reaction-diffusion system 43
3.5. Pull-back exponential attractor 51
3.6. Nonautonomous chemotaxis system 59

Chapter 4. Porous medium equation in homogeneous media: Long-time dynamics 67
4.1. A priori estimates and regularity of solutions 68
4.2. Finite-dimensional global attractor 74
4.3. Exponential attractor 80
4.4. Infinite-dimensional global attractor 83

Chapter 5. Porous medium equation in heterogeneous media: Long-time dynamics 89
5.1. Existence of global solutions and a priori estimates 89
5.2. Infinite-dimensional global attractor 91

Chapter 6. Long-time dynamics of p-Laplacian equations: Homogeneous media 101
6.1. Existence of global solutions and a priori estimates 101
6.2. The global attractor and its Kolmogorov ε-entropy 104

Chapter 7. Long-time dynamics of p-Laplacian equations: Heterogeneous media 107
7.1. Existence of global solutions and a priori estimates 107
7.2. The global attractor and Kolmogorov ε-entropy 113

Chapter 8. Doubly nonlinear degenerate parabolic equations 125
8.1. A priori estimates and dissipativity 127
8.2. Existence and uniqueness of solutions 137
8.3. Global and exponential attractors 142

Chapter 9. On a class of PDEs with degenerate diffusion and chemotaxis: Autonomous case 147
9.1. Global existence and boundedness 149
9.2. Uniqueness 154
9.3. Dissipative estimates and the weak attractor in L^∞ 158
9.4. Appendix (Existence) 169
9.5. Appendix (Proof of the auxiliary lemma) 171

Chapter 10. On a class of PDEs with degenerate diffusion and chemotaxis: Nonautonomous case 173
10.1. A priori estimates 175
10.2. Uniqueness 185
10.3. Appendix (Existence of solution) 188
10.4. Appendix (Total biomass) 189

Chapter 11. ODE-PDE coupling arising in the modelling of a forest ecosystem 191
11.1. A priori estimates, existence, and uniqueness 193
11.2. The monotone case: Asymptotic compactness and regular attractor 200
11.3. The nonmonotone f: Stabilization for the case of a weak coupling 206

Bibliography 213
