Periodic Table xvii

Information Tables xviii

Chapter 1	Systems, States, and Processes	1
	1.1 Scientific Inquiry	2
	1.2 Systems and States	3
	1.3 Units of Measurements. SI Units	6
	1.4 State Functions	8
	1.5 The Relationship between Macrostates and Microstates	11
	1.6 Processes	16
	<i>Problems</i>	<i>19</i>
Chapter 2	The Equilibrium Macroscopic States of Gases and Liquids	21
	2.1 Mathematical Functions and the Equilibrium Macroscopic State of a Simple System	22
	2.2 Real Liquids and Solids	25
	2.3 Real Gases	28
	2.4 The Coexistence of Phases and the Critical Point	32
	<i>Problems</i>	<i>41</i>
Chapter 3	Work, Heat, and Energy: The First Law of Thermodynamics	45
	3.1 Work and the State of a System	46
	3.2 Heat	53
	3.3 Internal Energy. The First Law of Thermodynamics	55
	3.4 Calculation of Amounts of Heat and Energy Changes	58
	3.5 Enthalpy—A Convenience Variable	68
	3.6 Calculation of Enthalpy Changes for Non-Chemical Processes	74
	3.7 Calculation of Enthalpy Changes for a Class of Chemical Reactions	77
	3.8 Energy Changes of Chemical Reactions	85
	<i>Problems</i>	<i>90</i>
Chapter 4	The Second and Third Laws of Thermodynamics: Entropy	95
	4.1 The Second Law of Thermodynamics and the Carnot Heat Engine	96

4.2	The Mathematical Statement of the Second Law. Entropy	102
4.3	The Calculation of Entropy Changes	107
4.4	Statistical Entropy	116
4.5	The Third Law of Thermodynamics and Absolute Entropies	119
	<i>Problems</i>	<i>125</i>
Chapter 5	The Thermodynamics of Real Systems	131
5.1	Criteria for Spontaneous Processes and for Equilibrium. The Gibbs and Helmholtz Energies	132
5.2	Fundamental Relations for Closed Simple Systems	137
5.3	Gibbs Energy Calculations	142
5.4	The Description of Multicomponent and Open Systems	146
5.5	Additional Useful Thermodynamic Identities	152
5.6	Euler's Theorem and the Gibbs–Duhem Relation	156
	<i>Problems</i>	<i>162</i>
Chapter 6	Phase Equilibrium	167
6.1	The Fundamental Fact of Phase Equilibrium	168
6.2	The Gibbs Phase Rule	170
6.3	Phase Equilibrium in a One-Component System	174
6.4	The Gibbs Energy and Phase Transitions	180
6.5	Surface Structure and Thermodynamics	184
6.6	Surfaces in Multicomponent Systems	191
	<i>Problems</i>	<i>195</i>
Chapter 7	Multicomponent Systems	199
7.1	Ideal Solutions	200
7.2	Henry's Law and Dilute Nonelectrolyte Solutions	209
7.3	The Activity and the Description of General Systems	216
7.4	Activity Coefficients in Electrolyte Solutions	228
7.5	Phase Diagrams for Nonideal Mixtures	234
7.6	Colligative Properties	244
	<i>Problems</i>	<i>250</i>
Chapter 8	The Thermodynamics of Chemical Equilibrium	255
8.1	Gibbs Energy Changes and Equilibria of Chemical Reactions. The Equilibrium Constant	256
8.2	Reactions Involving Gases and Pure Substances	261
8.3	Chemical Equilibrium in Solution	264
8.4	Equilibria in Solutions of Strong Electrolytes	266
8.5	Acid–Base Equilibrium Calculations	270
8.6	Temperature Dependence of Equilibrium Constants. The Principle of Le Châtelier	276
8.7	Chemical Reactions and Biological Systems	280
	<i>Problems</i>	<i>285</i>

Chapter 9	The Thermodynamics of Electrical Systems	291
9.1	The Chemical Potential and the Electric Potential	292
9.2	Electrochemical Cells at Equilibrium	293
9.3	Half-Cell Potentials and Cell Potentials	300
9.4	The Determination of Activity Coefficients of Electrolytes	307
9.5	Thermodynamic Information from Electrochemistry	312
	<i>Problems</i>	<i>315</i>
Chapter 10	Gas Kinetic Theory. The Molecular Theory of Dilute Gases at Equilibrium	319
10.1	The Model System for a Dilute Gas	320
10.2	The Velocity Probability Distribution	324
10.3	The Distribution of Molecular Speeds	333
10.4	The Pressure of an Ideal Gas	337
10.5	Wall Collisions and Effusion	341
10.6	The Model System with Potential Energy	343
10.7	The Hard-Sphere Gas	347
10.8	The Molecular Structure of Liquids	357
	<i>Problems</i>	<i>359</i>
Chapter 11	Transport Processes	365
11.1	The Macroscopic Description of Nonequilibrium States	366
11.2	Transport Processes	368
11.3	Transport Processes in the Hard-Sphere Gas	380
11.4	The Structure of Liquids and Transport Processes in Liquids	385
11.5	Transport in Electrolyte Solutions	390
	<i>Problems</i>	<i>397</i>
Chapter 12	The Rates of Chemical Reactions	401
12.1	The Macroscopic Description of Chemically Reacting Systems	402
12.2	Forward Reactions with one Reactant	404
12.3	Forward Reactions with More Than One Reactant	412
12.4	Inclusion of a Reverse Reaction. Chemical Equilibrium	417
12.5	Consecutive Reactions and Competing Reactions	420
12.6	The Experimental Study of Fast Reactions	424
	<i>Problems</i>	<i>430</i>
Chapter 13	Chemical Reaction Mechanisms	435
13.1	Reaction Mechanisms and Elementary Processes in Gases	436
13.2	Elementary Reactions in Liquid Solutions	438
13.3	The Temperature Dependence of Rate Constants. The Collision Theory of Bimolecular Gaseous Reactions	444
13.4	Reaction Mechanisms and Rate Laws	450
13.5	Some Additional Mechanisms, Including Chain and Photochemical Mechanisms. Competing Mechanisms	463
13.6	Catalysis	469

13.7	Experimental Molecular Study of Chemical Reactions	481
	<i>Problems</i>	<i>487</i>
Chapter 14	The Principles of Quantum Mechanics. I. Classical Waves and the Schrödinger Equation	493
14.1	Classical Mechanics	494
14.2	Classical Waves	497
14.3	The Old Quantum Theory	507
14.4	De Broglie Waves and the Schrödinger Equation	514
14.5	The Particle in a Box. The Free Particle	522
14.6	The Harmonic Oscillator	531
	<i>Problems</i>	<i>534</i>
Chapter 15	The Principles of Quantum Mechanics. II. The Postulates of Quantum Mechanics	539
15.1	The First Two Postulates of Quantum Mechanics	540
15.2	Mathematical Operators	541
15.3	Postulate 3. Mathematical Operators Corresponding to Mechanical Variables in Quantum Mechanics	546
15.4	Postulate 4. Expectation Values	549
15.5	Postulate 5. The Determination of the State of a System	565
	<i>Problems</i>	<i>569</i>
Chapter 16	The Electronic States of Atoms. I. The Hydrogen Atom and the Simple Orbital Approximation for Multielectron Atoms	573
16.1	The Hydrogen Atom and the Central Force System. Angular Momentum	574
16.2	The Wave Functions of the Hydrogen Atom	582
16.3	The Helium Atom in the “Zero-Order” Orbital Approximation	597
16.4	Atoms with More Than Two Electrons	610
	<i>Problems</i>	<i>616</i>
Chapter 17	The Electronic States of Atoms. II. Higher-Order Approximations for Multielectron Atoms	619
17.1	The Variation Method and Its Application to the Helium Atom	620
17.2	The Perturbation Method and Its Application to the Helium Atom	625
17.3	The Self-Consistent Field Method	627
17.4	Excited States of the Helium Atom	629
17.5	Atoms with More than Two Electrons	632
	<i>Problems</i>	<i>642</i>
Chapter 18	The Electronic States of Molecules	647
18.1	The Born–Oppenheimer Approximation. The Hydrogen Molecule Ion	648
18.2	LCAO-MOs—Molecular Orbitals That Are Linear Combinations of Atomic Orbitals	655
18.3	Homonuclear Diatomic Molecules	660

18.4	Heteronuclear Diatomic Molecules	672
18.5	Symmetry in Polyatomic Molecules. Groups of Symmetry Operators	682
18.6	Electronic Structure of Polyatomic Molecules	690
18.7	More Advanced Treatments of Molecular Electronic Structure	709
	<i>Problems</i>	715
Chapter 19	Translational, Rotational, and Vibrational States of Atoms and Molecules	721
19.1	Translational Motions of Atoms	722
19.2	The Nonelectronic States of Diatomic Molecules	724
19.3	Rotation and Vibration in Polyatomic Molecules	736
19.4	The Equilibrium Populations of Molecular States	743
	<i>Problems</i>	746
Chapter 20	Spectroscopy and Photochemistry	751
20.1	Emmission/Absorption Spectroscopy and Energy Levels	752
20.2	The Spectra of Atoms	761
20.3	Rotational and Vibrational Spectra of Diatomic Molecules	762
20.4	Electronic Spectra of Diatomic Molecules	769
20.5	Spectra of Polyatomic Molecules	771
20.6	Fluorescence, Phosphorescence, and Photochemistry	775
20.7	Other Types of Spectroscopy	781
20.8	Magnetic Resonance Spectroscopy	792
20.9	Fourier Transform Spectroscopy	806
	<i>Problems</i>	811
Chapter 21	Equilibrium Statistical Mechanics	817
21.1	The Quantum Statistical Mechanics of a Sample System of Four Harmonic Oscillators	818
21.2	The Probability Distribution for a Dilute Gas	823
21.3	The Probability Distribution and the Molecular Partition Function	828
21.4	The Calculation of Molecular Partition Functions	836
21.5	Calculations of Thermodynamic Functions of Dilute Gases	845
21.6	Chemical Equilibrium in Dilute Gases	858
21.7	The Activated Complex Theory of Bimolecular Chemical Reactions in Dilute Gases	862
21.8	The Canonical Ensemble	872
21.9	Classical Statistical Mechanics	881
	<i>Problems</i>	892
Chapter 22	The Structure of Solids and Liquids	897
22.1	General Features of Solids	898
22.2	Crystal Vibrations	906
22.3	The Electronic Structure of Crystalline Solids	913
22.4	The Structure of Liquids	920

22.5	Polymer Formation and Conformation	927
22.6	Rubber Elasticity	936
22.7	Polymers in Solution	940
	<i>Problems</i>	<i>943</i>
Chapter 23	Some Additional Theories of Nonequilibrium Processes	947
23.1	Theories of Unimolecular Chemical Reactions	948
23.2	The Molecular Case History of a Chemical Reaction	952
23.3	Theories of Transport Processes in Fluid Systems	954
23.4	Nonequilibrium Electrochemistry	958
23.5	Electrical Conductivity in Solids	970
	<i>Problems</i>	<i>975</i>
	Appendixes	977
A.	Tables of Numerical Data	977
B.	Some Useful Mathematics	1001
C.	A Short Table of Integrals	1021
D.	Classical Mechanics	1025
E.	Some Derivations of Thermodynamic Formulas and Methods	1031
F.	Some Mathematics in Quantum Mechanics	1037
G.	The Perturbation Method	1045
H.	The Hückel Method	1047
I.	Matrix Representations of Groups	1051
J.	Symbols Used in This Book	1061
K.	Answers to Selected Exercises and Problems	1069
	Additional Reading	1097
	Index	1105
