Preface to the First Edition VII

Preface to the Third Edition IX

1 Introduction 3
1.1 The 6 P's 3
1.2 General Information 6
1.3 Identification of Polymers 13
1.4 Sustainability - The 6th P 15
References 20

2 Historical Background 21
2.1 From Natural to Synthetic Rubber 21
2.2 Cellulose and the $10,000 Idea 27
2.3 Galalith - The Milk Stone 30
2.4 Leo Baekeland and the Plastics Industry 31
2.5 Herman Mark and the American Polymer Education 34
2.6 Wallace Hume Carothers and Synthetic Polymers 37
2.7 Polyethylene - A Product of Brain and Brawn 39
2.8 The Super Fiber and the Woman Who Invented It 42
2.9 One Last Word - Plastics 44
References 47

3 Structure of Polymers 49
3.1 Macromolecular Structure of Polymers 49
3.2 Molecular Bonds and Inter-Molecular Attraction 50
3.3 Molecular Weight 51

3.4 Conformation and Configuration of Polymer Molecules 56
3.5 Arrangement of Polymer Molecules 59
3.5.1 Thermoplastic Polymers 60
3.5.2 Amorphous Thermoplastics 60
3.5.3 Semi-Crystalline Thermoplastics 62
3.5.4 Thermosets and Cross-Linked Elastomers 72
3.6 Copolymers and Polymer Blends 73
3.7 Polymer Additives 75
3.7.1 Flame Retardants 75
3.7.2 Stabilizers 77
3.7.3 Antistatic Agents 78
3.7.4 Fillers 78
3.7.5 Blowing Agents 79
References 82

4 Thermal Properties of Polymers 83
4.1 Material Properties 85
4.1.1 Thermal Conductivity 85
4.1.2 Specific Heat 91
4.1.3 Density 93
4.1.4 Thermal Diffusivity 96
4.1.5 Linear Coefficient of Thermal Expansion 97
4.1.6 Thermal Penetration 98
4.1.7 Glass Transition Temperature 99
4.1.8 Melting Temperature 99
4.2 Measuring Thermal Data 99
4.2.1 Differential Thermal Analysis (DTA) 100
4.2.2 Differential Scanning Calorimeter (DSC) 101
4.2.3 Thermomechanical Analysis (TMA) 103
4.2.4 Thermogravimetry (TGA) 104
4.2.5 Density Measurements 105
References 109

5 Rheology of Polymer Melts 111
5.1 Introduction 111
5.1.1 Continuum Mechanics 111
5.1.2 The Generalized Newtonian Fluid 113
5.1.3 Normal Stresses in Shear Flow 115
5.1.4 Deborah Number 116

5.2 Viscous Flow Models 119
5.2.1 The Power Law Model 119
5.2.2 The Bird-Carreau-Yasuda Model 121
5.2.3 The Bingham Fluid 122
5.2.4 Elongational Viscosity 122
5.2.5 Rheology of Curing Thermosets 125
5.2.6 Suspension Rheology 127
5.3 Simplified Flow Models Common in Polymer Processing 129
5.3.1 Simple Shear Flow 129
5.3.2 Pressure Flow Through a Slit 130
5.3.3 *Pressure Flow through a Tube – Hagen-Poiseuille Flow* 130
5.3.4 Couette Flow 131
5.4 Viscoelastic Flow Models 132
5.4.1 Differential Viscoelastic Models 132
5.4.2 Integral Viscoelastic Models 135
5.5 Rheometry 138
5.5.1 The Melt Flow Indexer 139
5.5.2 The Capillary Viscometer 139
5.5.3 *Computing Viscosity Using the Bagley and Weissenberg-Rabinowitsch Equations* 141
5.5.4 Viscosity Approximation Using the Representative *Viscosity Method* 142
5.5.5 The Cone-Plate Rheometer 143
5.5.6 The Couette Rheometer 144
5.5.7 Extensional Rheometry 145
5.6 Surface Tension 148
References 157

6 Introduction to Processing 163
6.1 Extrusion 163
6.1.1 The Plasticating Extruder 166
6.1.1.1 The Solids Conveying Zone 168
6.1.1.2 The Melting Zone 171
6.1.1.3 The Metering Zone 174
6.1.2 Extrusion Dies 175
6.1.2.1 Sheeting Dies 176
6.1.2.2 Tubular Dies 177
6.2 Mixing Processes 179
6.2.1 Distributive Mixing 181
6.2.1.1 Effect of Orientation 182

6.2.2 Dispersive Mixing ... 184
6.2.2.1 Break-Up of Particulate Agglomerates ... 184
6.2.2.2 Break-Up of Fluid Droplets ... 186
6.2.3 Mixing Devices ... 189
6.2.3.1 Static Mixers ... 190
6.2.3.2 Banbury Mixer ... 190
6.2.3.3 Mixing in Single Screw Extruders ... 192
6.2.3.4 Co-Kneader ... 194
6.2.3.5 Twin Screw Extruders ... 195
6.2.4 Energy Consumption During Mixing ... 198
6.2.5 Mixing Quality and Efficiency ... 199
6.2.6 Plasticization ... 201
6.3 Injection Molding ... 206
6.3.1 The Injection Molding Cycle ... 207
6.3.2 The Injection Molding Machine ... 210
6.3.2.1 The Plasticating and Injection Unit ... 210
6.3.2.2 The Clamping Unit ... 211
6.3.2.3 The Mold Cavity ... 213
6.4 Special Injection Molding Processes ... 216
6.4.1 Multi-Component Injection Molding ... 216
6.4.2 Co-Injection Molding ... 218
6.4.3 Gas-Assisted Injection Molding (GAIM) ... 219
6.4.4 Injection-Compression Molding ... 221
6.4.5 Reaction Injection Molding (RIM) ... 222
6.4.6 Liquid Silicone Rubber Injection Molding ... 225
6.5 Secondary Shaping ... 226
6.5.1 Fiber Spinning ... 226
6.5.2 Film Production ... 227
6.5.2.1 Cast Film Extrusion ... 227
6.5.2.2 Film Blowing ... 228
6.5.3 Blow Molding ... 230
6.5.3.1 Extrusion Blow Molding ... 230
6.5.3.2 Injection Blow Molding ... 232
6.5.3.3 Thermoforming ... 233
6.6 Calendering ... 235
6.7 Coating ... 238
6.8 Compression Molding ... 240
6.9 Foaming ... 242
6.10 Rotational Molding ... 244

6.11 Computer Simulation in Polymer Processing 245
6.11.1 Mold Filling Simulation 246
6.11.2 Orientation Predictions 248
6.11.3 Shrinkage and Warpage Predictions 249
References 260

7 Anisotropy Development During Processing 263
7.1 Orientation in the Final Part 263
7.1.1 Processing Thermoplastic Polymers 263
7.1.2 Processing Thermoset Polymers 271
7.2 Predicting Orientation in the Final Part 275
7.2.1 Planar Orientation Distribution Function 276
7.2.2 Single Particle Motion 278
7.2.3 Jeffery's Model 279
7.2.4 Folgar-Tucker Model 280
7.2.5 Tensor Representation of Fiber Orientation 281
7.2.5.1 Predicting Orientation in Complex Parts Using Computer Simulation 282
7.3 Fiber Damage 287
References 293

8 Solidification of Polymers 295
8.1 Solidification of Thermoplastics 295
8.1.1 Thermodynamics During Cooling 295
8.1.2 Morphological Structure 299
8.1.3 Crystallization 300
8.1.4 Heat Transfer During Solidification 303
8.2 Solidification of Thermosets 307
8.2.1 Curing Reaction 308
8.2.2 Cure Kinetics 309
8.2.3 Heat Transfer During Cure 314
8.3 Residual Stresses and Warpage of Polymeric Parts 316
8.3.1 Residual Stress Models 319
8.3.1.1 Residual Stress Model Without Phase Change Effects 321
8.3.1.2 Model to Predict Residual Stresses with Phase Change Effects 322
8.3.2 Other Simple Models to Predict Residual Stresses and Warpage 324
8.3.2.1 Uneven Mold Temperature 326
8.3.2.2 Residual Stress in a Thin Thermoset Part 327
8.3.2.3 Anisotropy Induced Curvature Change 328

8.3.3 Predicting Warpage in Actual Parts 329
References 336

9 Mechanical Behavior of Polymers 341
9.1 Basic Concepts of Stress and Strain 341
9.1.1 Plane Stress 342
9.1.2 Plane Strain 343
9.2 Viscoelastic Behavior of Polymers 343
9.2.1 Stress Relaxation Test 344
9.2.2 Time-Temperature Superposition (WLF-Equation) 346
9.2.3 The Boltzmann Superposition Principle 347
9.3 Applying Linear Viscoelasticity to Describe the Behavior of Polymers .. 348
9.3.1 The Maxwell Model 349
9.3.2 Kelvin Model 350
9.3.3 Jeffrey Model 352
9.3.4 Standard Linear Solid Model 354
9.3.5 The Generalized Maxwell Model 356
9.4 The Short-Term Tensile Test 361
9.4.1 Rubber Elasticity 362
9.4.2 The Tensile Test and Thermoplastic Polymers 367
9.5 Creep Test 374
9.5.1 Isochronous and Isometric Creep Plots 378
9.6 Dynamic Mechanical Tests 379
9.6.1 Torsion Pendulum 379
9.6.2 Sinusoidal Oscillatory Test 383
9.7 Effects of Structure and Composition on Mechanical Properties 385
9.7.1 Amorphous Thermoplastics 385
9.7.2 Semi-Crystalline Thermoplastics 388
9.7.3 Oriented Thermoplastics 390
9.7.4 Crosslinked Polymers 395
9.8 Mechanical Behavior of Filled and Reinforced Polymers 397
9.8.1 Anisotropic Strain-Stress Relation 399
9.8.2 Aligned Fiber Reinforced Composite Laminates 400
9.8.3 Transformation of Fiber Reinforced Composite Laminate Properties 402
9.8.4 Reinforced Composite Laminates with a Fiber Orientation Distribution Function 404
9.9 Strength Stability Under Heat 405
References 421

10 Failure and Damage of Polymers 423

10.1 Fracture Mechanics 423
10.1.1 Fracture Predictions Based on the Stress Intensity Factor 424
10.1.2 Fracture Predictions Based on an Energy Balance 426
10.1.3 Linear Viscoelastic Fracture Predictions Based on *J*-Integrals . 428

10.2 Short-Term Tensile Strength 430
10.2.1 Brittle Failure 430
10.2.2 Ductile Failure 434
10.2.3 Failure of Highly Filled Systems or Composites 437

10.3 Impact Strength 440
10.3.1 Impact Test Methods 446
10.3.2 Fracture Mechanics Analysis of Impact Failure 450

10.4 Creep Rupture 455
10.4.1 Creep Rupture Tests 456
10.4.2 Fracture Mechanics Analysis of Creep Rupture 459

10.5 Fatigue 459
10.5.1 Fatigue Test Methods 460
10.5.2 Fracture Mechanics Analysis of Fatigue Failure 468

10.6 Friction and Wear 470

10.7 Stability of Polymer Structures 473

10.8 Environmental Effects on Polymer Failure 475
10.8.1 Weathering 475
10.8.2 Chemical Degradation 480
10.8.3 Thermal Degradation of Polymers 482

References 486

11 Electrical Properties of Polymers 489

11.1 Dielectric Behavior 489
11.1.1 Dielectric Coefficient 489
11.1.2 Mechanisms of Dielectrical Polarization 493
11.1.3 Dielectric Dissipation Factor 496
11.1.4 Implications of Electrical and Thermal Loss in a Dielectric 499

11.2 Electric Conductivity 500
11.2.1 Electric Resistance 500
11.2.2 Physical Causes of Volume Conductivity 501

11.3 Application Problems 504
11.3.1 Electric Breakdown 504
11.3.2 Electrostatic Charge 508

11.3.3 Electrets 509
11.3.4 Electromagnetic Interference Shielding (EMI Shielding) 509
11.4 Magnetic Properties 510
11.4.1 Magnetizability 510
11.4.2 Magnetic Resonance 510
References 511

12 Optical Properties of Polymers 513
12.1 Index of Refraction 513
12.2 Photoelasticity and Birefringence 516
12.3 Transparency, Reflection, Absorption, and Transmittance 520
12.4 Gloss 526
12.5 Color 527
12.6 Infrared Spectroscopy 531
12.7 Infrared Pyrometry 532
12.8 Heating with Infrared Radiation 534
References 536

13 Permeability Properties of Polymers 537
13.1 Sorption 537
13.2 Diffusion and Permeation 539
13.3 Measuring S, D, and P 544
13.4 Corrosion of Polymers and Cracking [5] 545
13.5 Diffusion of Polymer Molecules and Self-diffusion 548
References 548

14 Acoustic Properties of Polymers 549
14.1 Speed of Sound 549
14.2 Sound Reflection 551
14.3 Sound Absorption 552
References 553

Appendix 555
Appendix I 556
Appendix II 564
Appendix III 565

Appendix IV - Balance Equations 584
Continuity Equation 584
Energy Equation for a Newtonian Fluid 584
Momentum Balance 585
Momentum Equation in Terms of τ 585
Navier-Stokes Equation 585

Index 587
