

# *Introduction to Linear Optimization*

Dimitris Bertsimas

John N. Tsitsiklis

**Massachusetts Institute of Technology**

Athena Scientific, Belmont, Massachusetts

# *Contents*

<b>Preface . . . . .</b>	<b>xi</b>
<b>1. Introduction . . . . .</b>	<b>1</b>
1.1. Variants of the linear programming problem . . . . .	2
1.2. Examples of linear programming problems . . . . .	6
1.3. Piecewise linear convex objective functions . . . . .	15
1.4. Graphical representation and solution . . . . .	21
1.5. Linear algebra background and notation . . . . .	26
1.6. Algorithms and operation counts . . . . .	32
1.7. Exercises . . . . .	34
1.8. History, notes, and sources . . . . .	38
<b>2. The geometry of linear programming . . . . .</b>	<b>41</b>
2.1. Polyhedra and convex sets . . . . .	42
2.2. Extreme points, vertices, and basic feasible solutions . . . . .	46
2.3. Polyhedra in standard form . . . . .	53
2.4. Degeneracy . . . . .	58
2.5. Existence of extreme points . . . . .	62
2.6. Optimality of extreme points . . . . .	65
2.7. Representation of bounded polyhedra* . . . . .	67
2.8. Projections of polyhedra: Fourier-Motzkin elimination* . . . . .	70
2.9. Summary . . . . .	75
2.10. Exercises . . . . .	75
2.11. Notes and sources . . . . .	79
<b>3. The simplex method . . . . .</b>	<b>81</b>
3.1. Optimality conditions . . . . .	82
3.2. Development of the simplex method . . . . .	87
3.3. Implementations of the simplex method . . . . .	94

3.4.	Anticycling: lexicography and Bland's rule . . . . .	108
3.5.	Finding an initial basic feasible solution . . . . .	111
3.6.	Column geometry and the simplex method . . . . .	119
3.7.	Computational efficiency of the simplex method . . . . .	124
3.8.	Summary . . . . .	128
3.9.	Exercises . . . . .	129
3.10.	Notes and sources . . . . .	137
<b>4.</b>	<b>Duality theory . . . . .</b>	<b>139</b>
4.1.	Motivation . . . . .	140
4.2.	The dual problem . . . . .	142
4.3.	The duality theorem . . . . .	146
4.4.	Optimal dual variables as marginal costs . . . . .	155
4.5.	Standard form problems and the dual simplex method . . . . .	156
4.6.	Farkas' lemma and linear inequalities . . . . .	165
4.7.	From separating hyperplanes to duality* . . . . .	169
4.8.	Cones and extreme rays . . . . .	174
4.9.	Representation of polyhedra . . . . .	179
4.10.	General linear programming duality* . . . . .	183
4.11.	Summary . . . . .	186
4.12.	Exercises . . . . .	187
4.13.	Notes and sources . . . . .	199
<b>5.</b>	<b>Sensitivity analysis . . . . .</b>	<b>201</b>
5.1.	Local sensitivity analysis . . . . .	202
5.2.	Global dependence on the right-hand side vector . . . . .	212
5.3.	The set of all dual optimal solutions* . . . . .	215
5.4.	Global dependence on the cost vector . . . . .	216
5.5.	Parametric programming . . . . .	217
5.6.	Summary . . . . .	221
5.7.	Exercises . . . . .	222
5.8.	Notes and sources . . . . .	229
<b>6.</b>	<b>Large scale optimization . . . . .</b>	<b>231</b>
6.1.	Delayed column generation . . . . .	232
6.2.	The cutting stock problem . . . . .	234
6.3.	Cutting plane methods . . . . .	236
6.4.	Dantzig-Wolfe decomposition . . . . .	239
6.5.	Stochastic programming and Benders decomposition . . . . .	254
6.6.	Summary . . . . .	260
6.7.	Exercises . . . . .	260
6.8.	Notes and sources . . . . .	263

<b>7. Network flow problems . . . . .</b>	<b>265</b>
7.1. Graphs . . . . .	267
7.2. Formulation of the network flow problem . . . . .	272
7.3. The network simplex algorithm . . . . .	278
7.4. The negative cost cycle algorithm . . . . .	291
7.5. The maximum flow problem . . . . .	301
7.6. Duality in network flow problems . . . . .	312
7.7. Dual ascent methods* . . . . .	316
7.8. The assignment problem and the auction algorithm . . . . .	325
7.9. The shortest path problem . . . . .	332
7.10. The minimum spanning tree problem . . . . .	343
7.11. Summary . . . . .	345
7.12. Exercises . . . . .	347
7.13. Notes and sources . . . . .	356
<b>8. Complexity of linear programming and the ellipsoid method . . . . .</b>	<b>359</b>
8.1. Efficient algorithms and computational complexity . . . . .	360
8.2. The key geometric result behind the ellipsoid method . . . . .	363
8.3. The ellipsoid method for the feasibility problem . . . . .	370
8.4. The ellipsoid method for optimization . . . . .	378
8.5. Problems with exponentially many constraints* . . . . .	380
8.6. Summary . . . . .	387
8.7. Exercises . . . . .	388
8.8. Notes and sources . . . . .	392
<b>9. Interior point methods . . . . .</b>	<b>393</b>
9.1. The affine scaling algorithm . . . . .	395
9.2. Convergence of affine scaling* . . . . .	404
9.3. The potential reduction algorithm . . . . .	409
9.4. The primal path following algorithm . . . . .	419
9.5. The primal-dual path following algorithm . . . . .	431
9.6. An overview . . . . .	438
9.7. Exercises . . . . .	440
9.8. Notes and sources . . . . .	448
<b>10. Integer programming formulations . . . . .</b>	<b>451</b>
10.1. Modeling techniques . . . . .	452
10.2. Guidelines for strong formulations . . . . .	461
10.3. Modeling with exponentially many constraints . . . . .	465
10.4. Summary . . . . .	472
10.5. Exercises . . . . .	472

10.6.	Notes and sources . . . . .	477
<b>11.</b>	<b>Integer programming methods . . . . .</b>	<b>479</b>
11.1.	Cutting plane methods . . . . .	480
11.2.	Branch and bound . . . . .	485
11.3.	Dynamic programming . . . . .	490
11.4.	Integer programming duality . . . . .	494
11.5.	Approximation algorithms . . . . .	507
11.6.	Local search . . . . .	511
11.7.	Simulated annealing . . . . .	512
11.8.	Complexity theory . . . . .	514
11.9.	Summary . . . . .	522
11.10.	Exercises . . . . .	523
11.11.	Notes and sources . . . . .	530
<b>12.</b>	<b>The art in linear optimization . . . . .</b>	<b>533</b>
12.1.	Modeling languages for linear optimization . . . . .	534
12.2.	Linear optimization libraries and general observations . . . . .	535
12.3.	The fleet assignment problem . . . . .	537
12.4.	The air traffic flow management problem . . . . .	544
12.5.	The job shop scheduling problem . . . . .	551
12.6.	Summary . . . . .	562
12.7.	Exercises . . . . .	563
12.8.	Notes and sources . . . . .	567
<b>References . . . . .</b>		<b>569</b>
<b>Index . . . . .</b>		<b>579</b>
